In the case of Czechoslovakia, the legislation of that country provides that the actual hours of work of workers shall, in principle, not exceed eight hours within twenty-four hours, or forty-eight hours in the week, but the Act further provides that the distribution of the daily and weekly hours of labour shall be a matter for agreement between the employers and the workers. Then there are provisions to that effect that when it would not be otherwise possible to alternate shifts and the work cannot be interrupted for technical reasons without considerable disturbance to the manufacturing process, the daily or weekly hours can be extended, provided that each worker has a thirty-two hour rest period each week and provided that the worker is paid overtime for any work over the weekly forty-eight hours. Furthermore, no less than twenty-nine classes of industries are given where the process is declared to be continuous and in which the daily hours may be extended provided overtime is paid. It must be said that the range of these industries is very wide. According to figures supplied by the Czechoslovakian Government in 1925, some 812,000 workers were employed in undertakings working overtime and of these one-third were actually working overtime and the total amount of overtime worked is given in working days at 1,782,390.

It must be said that a perusal of that section of the last report of the International Labour Conference dealing with the question of hours of labour, suggests to your Commissioners the difficulty of arriving at what weight may be given to some of these apparent ratifications of the Convention in question.

It may be added that your Commissioners understand Belgium has ratified the convention but they have been unable to get any information thereon.

Mention was also made at the hearing of other eight-hour day legislation, apart from any passed in pursuance of the 1919 Washington convention, being effective in a number of other countries, these countries including France, Germany, Italy, Spain, Poland and Sweden. Your Commissioners have been unable to obtain any information in regard to legislation of this nature, with the exception of that of France, where such legislation was to become effective only upon agreement between the employer and his employees. As already stated, Italy, so far as your Com-

missioners can learn, is now on a nine-hour day basis. That any such legislation, at least so far as the larger countries are concerned, is not very effective, may be seen from the report of the Director of the International Labour Conference already referred to (page 219, Part I). Reference is there made to the differences between rates of wages, hours, and other conditions of work of British shipyard workers and of shipyard workers on the Continent. A joint Committee of Inquiry, composed of representatives from both the British Shipyard Workers' Unions and the Shipbuilding Employers' Federation, reached the conclusion that hours of work were longer in Germany, Holland and France than in Great Britain, and a joint petition was presented to the Government urging it to take steps to further the observance of a shorter working week in the Continental countries.

It is, of course, well known that in Australia the hours of labour are very favourable to the worker. It is to be remembered, however, that Australia is far distant from any competitive markets.

Neither the United States nor any provinces of the Dominion of Canada, with the exception of British Columbia, have adopted any general limitation of hours of labour such as was laid down by the Washington convention. Any limitation of labour hours in the United States appears, in the main, to be confined to workers engaged in public works or on Government contracts, or, as is the case in some of the States, in one or two specified industries. A number of the States have adopted a basic eight-hour day but, as already pointed out, this is far different in effect from a straight eight-hour day or a forty-eight hour week. Where there has been any real limitation of hours of labour in the United States, it has been by agreement between employer and employee. In Canada, apart from British Columbia and the limitation in our own Factories Act, there is no actual limitation of hours of labour except by agreement of the parties.

With the general principle of the forty-eight hour week and the desire of labour for a greater amount of leisure for employees, your Commissioners have much sympathy. The question, however, that is to be determined is whether under present conditions, the adoption of the hours of labour in question is advisable, bearing in mind its effect upon the province as a whole. The fact that the industrial concerns of this province must compete with those of the remaining provinces of Canada as well as with those of the United States suggests to your Commissioners the possibility of too greatly handicapping our own industries if the legislation in question is put into effect. If that is the result it will, of course, speedily react upon the employees. The situation thus created, indeed, would be much the same as each of the highly industrial countries of Great Britain, France and Germany, at this very time fears would happen to it if it adopted the eight-hour day while its competitors continued on the basis of longer hours, and it is this fear that has prevented those countries from ratifying the Washington convention except on condition that the other countries do likewise. Alberta cannot be said to be anyway nearly as highly developed industrially as is the United States or some of the other provinces of Canada. The industries in Alberta, for the most part, are in their infancy and the effect of the proposal, can, at best be said to be problematical.

At the National Industrial Conference held in Ottawa in 1919 a month or so prior to the opening of the Conference at Washington, the the present Premier of the Dominion, in addressing the conference, stressed the necessity of bringing about an equality of the standards in industry throughout the Dominion. Dealing with this subject he said "if some provinces are going to have a high level of industrial standards and other provinces are not willing to approach to that high level, then the provinces which have high industrial standards are going to be handicapped by the provinces that maintain the standards at a lower level, so I think that one of the greatest services this gathering can render will be to emphasize the necessity that throughout the whole of this Dominion of Canada we have such uniformity of standards in our industrial regulations that the provinces that are behind the line, if there are any, will be brought up to the level of all the others and one standard made to prevail so far as may be possible, having regard to the difference of conditions in the different provinces.

It is true that, as far as your Commissioners can gather, the majority of industrial concerns in the province are at least nominally, on the eight-hour day or forty-eight hour week basis. According to the statistics obtained from the Provincial Bureau of Labour, out of a total number of 10,683 employees in the factories of Alberta, 7,262 are given as working forty-eight hours per week or less. It must be remembered, however, that included in these totals are between 1,300 and 1,400 female employees who come within the limitation of hours fixed by the Minimum Wage Regulations. The regulations of hours as affect-

ing female employees has generally been more strict than those affecting male employees. Furthermore, it may be said, that many of the concerns which, in the statistics referred to are given as working their employees forty-eight hours or less per week, strenuously objected to the proposal now under consideration and some of these employees undoubtedly do work over the forty-eight hour week. Your Commissioners believe that it would not be unfair to say that the number of male employees in the statistics referred to would comprise somewhat more than one-half of the total male employees in the factories of the province. There are, no doubt, other industries not included in the returns given. For instance, the building industry is not included and this is largely on a forty-four hour week basis throughout the Dominion, but from its very nature it has no outside competition.

It may be said in this connection that in some industries the hours of labour, largely through the organization of employees, are fairly uniform throughout the whole Dominion. Thus, in the manufacture of clothing, statistics from the Dominion Labour Department show that a forty-four hour week is widely prevalent throughout the country and the effect of this is seen in the comparatively short hours of labour in this industry in Alberta. The same remark applies to the printing trade, which is highly organized and it will be found that, for the main part, in the industries such as those just mentioned, the hours of labour in the United States correspond with those in effect in Canada.

The suggestion that has been made that because some industries in the Province are already on an eight hour basis or less, all other industries should be compelled to apply similar restrictions, is not sound. What really governs is the conditions of labour in the same class of industry in the competing provinces or countries.

It is doubtful whether the reduction of hours from nine to eight would mean any substantial increase in employment in the Province. It was indeed asserted by a number of employees that if they were compelled to adopt an eight-hour day or forty-eight hour week, it would mean that while they would be compelled to employ more men in the rush season, they would also be compelled to let out some of the employees during the slack season who were now retained the year round. The slack season in most industries in this Province is in the winter time and in such cases the result would be a greater amount of unemployment at a time when it is most undesirable.

The attention of your Commissioners was directed at the various hearings, to the fact that industrial undertakings in this province were, to a very considerable extent, closely related to the agricultural industry and it was urged that a rigid limitation of hours in such industries would be a hardship not only on the industries themselves, but upon the farmer. It was also pointed out that, with the frequently long and severe winters that obtain here, other industries were, in their nature seasonal, and short operating seasons militated against the observance of an eight-hour day.

These are, indeed, matters which suggest the difficulty of applying this limitation of hours of labour where the conditions are as they are in Alberta and they offer, in the opinion of your Commissioners, along with the problem of outside competition, the really material obstacles to the adoption in this Province of the forty-eight hour week, and a greater obstacle to the adoption of a straight eight-hour day.

In referring to the absence of restrictive legislation in regard to hours of labour in the other provinces of Canada, mention has been made of the exception of British Columbia. In 1925 the British Columbia Government brought into operation an act entitled "The Hours of Work Act, 1925" which limited hours of work in industrial enterprises to eight hours a day and forty-eight hours in the week. The Act specifically excludes any branch of the agricultural, horticultural and dairying industry and it does not apply to shops, stores, offices, office buildings or hotels.

The Act contains provisions similar to those contained in the Washington Draft Convention relating to hours of labour which permit a forty-eight hour week instead of a strict eight-hour day, by agreement between employer and employees, and provides for exceptions covering continuous processes and in case of accidents or cases of emergency.

The administration of the Act is left to a Board of Adjustment, consisting of three members who may make regulations determining:—

(*a*) The permanent exceptions that may be allowed in preparatory or complementary work necessary to be carried on outside the limits laid down for the general working of an industrial undertaking or for certain classes of workers whose work is essentially seasonal or intermittent.

(*b*) The temporary exceptions that may be allowed in case of exceptional cases of pressure of work.

The Board is further given the power, after inquiry, and subject to the approval of the

Lieutenant Governor in Council, to exempt any industrial undertaking or class of industrial undertaking, in whole or in part from the operation of the Act, or for such seasons or portions of the year as it may consider necessary or expedient, having regard to the nature and conditions of the undertaking, the conditions of employment and the welfare of the employees.

Very wide exemptions have been granted by the Board. For instance, shipping of all kinds, fish canneries, and repair work in metal industries are exempted, and the fruit packing industry is given permission to work over the eight-hour day during the fruit season. Your Commissioners also understand that the meat packing industry is not affected by the Act. Smelting comes under the continuous process provisions and the working hours therein are limited to fifty-six per week. Employees in saw mills, planing mills and shingle mills in that part of the province lying east of the Cascade Mountains are permitted to work nine hours a day instead of eight. Bakeries are permitted to work ten hours per month in excess of the forty-eight hour week, which would give a fifty and one-half hour week, and bakery salesmen and delivery men are allowed an extra twenty-six hours per month in excess of the forty-eight hours per week.

The exceptions mentioned, and they are not the only ones, have not been given to indicate in any way the nature of industries, exemption of which is found to be necessary, for conditions here differ very considerably from conditions in the main industrial portion of British Columbia. They are given merely to suggest that there must be so many exceptions allowed in the administration of legislation of this nature as to at once lay it open to the criticism that the restrictions are largely nominal. It must be further considered that in British Columbia there is the problem arising from oriental labour which, fortunately, in this province, does not exist. Your Commissioners understand that the Act in British Columbia is very ably administered and they are not prepared to say that it is without merit. It must be remembered, however, that conditions here are not the same as in British Columbia and that the scope of the British Columbia Act is much narrower than that of our own Act. So much also depends upon the state of mind of those administering the provisions of such an Act, and the attitude adopted by them in that administration, that your Commissioners have not felt justified in recommending that action along similar lines should be taken in this province.

Generally speaking, the limitation as to hours of labour in the Factories Act, as it now stands, provides against the working of employees for any extreme hours and the Act is very wide in its scope. However, if there are cases where employees are working extremely long hours, there is no reason why an amendment to the schedule of the present Act should not meet such cases. For instance, at Calgary, the Commission heard representatives from the oil well drillers working in the Turner Valley field, who represented that they were working on a twelve-hour shift. Except in extremely cold weather, when they are not required to work, their work is continuous and it suggests itself to the Commission that any such hours of labour in continuous employment are excessive. The case, however, could be easily met by an amendment to the schedule of the Factories Act.

Neither in the Washington Draft Convention, nor in the British Columbia Hours of Work Act is there any provision applicable to such concerns as shops, stores, wholesale warehouses, offices or hotels and, apart from regulations by various municipalities, or so far as female workers are concerned, by the regulations of the various Minimum Wage Boards, and there are, as far as your Commissioners can learn, no set hours of work in these businesses in other provinces. Our own Act only embraces concerns of this nature situated in towns of over 5,000 population and, in the cities within its provisions there are, so far as retail stores are concerned, by-laws dealing with early closing and a compulsory half holiday one day a week, either during the whole or a part of the year. Calgary and Lethbridge have this half holiday the year round, and according to the statements made at sittings of the Commission at Medicine Hat, the half holiday is given in that city the year round, although the city by-law only requires it for the five summer months. In these three cities, however, the retail stores keep open on Saturday night until nine o'clock. In Edmonton, the half holiday provision only applies to the summer months, but the stores are closed Saturday night. It was stated that the practice in the larger stores at least, in these cities, was to give the employees two weeks' holiday each year, with pay.

It may be noted that no representative of the employees in these businesses appeared before your Commissioners and, although it has been urged that this is accounted for by the fact that the employees in these concerns are unorganized and consequently inarticulate,

it does suggest itself to your Commissioners that if there was any serious objection to the present working hours or any great degree of discontent, it would have come to the notice of the Commission.

It must be recognized that the conditions and nature of the work in these various businesses are widely different from those existing in factories, and your Commissioners are of the opinion that if any change were contemplated in the present Act, in the way of further limitation of hours of labour, these businesses might well be dealt with in a separate Act. However, they are not prepared to recommend that the eight-hour day or the forty-eight hour week should be applied for the present to such concerns.

As regards industrial undertakings, your Commissioners desire to say that, partly because of the fact that so many of the more important industries in Alberta are closely related to agriculture, and because of the seasonal nature of other industries, but mainly because of the danger of competition from outside points where there would be no similar restrictions as to hours of labour, they have come to the conclusion that it would not be advisable to adopt the forty-eight hour week or the straight eight-hour day in connection therewith. As many concerns, both industrial and commercial, only work a half day on Saturdays, a straight eight-hour day would mean, in those cases, either a forty-eight-hour week or the elimination of the Saturday afternoon off.

They believe that only through the co-operation of all the provinces can the suggested limitation of hours of labour be safely put into effect. To be satisfactorily effective any such law should be national in extent.

Your Commissioners are not prepared to single out any particular industries in regard to which such hours of labour should be made applicable at the present time. If they did so their choice would undoubtedly fall upon those very industries where, owing to the employees being more highly organized, the hours of labour are at present most favourable to the employees.

Edmonton, Friday, the eighteenth day of February, A.D. 1927.

Respectfully submitted,

(Sgd.) A. A. Carpenter,
Chairman.

(Sgd.) Norman Hindsley,
Commissioner.

Minority Report

To His Honour the Lieutenant-Governor in Council Province of Alberta.

Sir,—The undersigned, being one of the Commissioners appointed to inquire into the advisability of establishing a forty-eight hour working week in the Province, being unable to agree with the conclusions of the other two Commissioners, begs leave to report separately as follows:—

It will be observed that the recommendations of the majority of the Commissioners is made "....mainly because of the danger of competition from outside points where there would be similar restrictions as to hours". This, it will be noted, was also one of the chief arguments employed by some of those who appeared before the Commission to give evidence against the advisability of establishing the forty-eight hour week.

After giving careful study to the evidence submitted to the Commission the undersigned is firmly of the opinion that the Commissioners were not justified in recommending that there should be no step taken at this time to establish the forty-eight hour working week in Alberta. Those who contend that such a limitation of hours would be detrimental to industry in the Province have not, in my opinion, submitted sufficient evidence to substantiate their claims.

There are many records of various industries where hours of labour have been curtailed, either voluntarily or by legislation, yet there was not a single specific incident brought to the attention of the Commission where the curtailment of working hours had had an adverse effect on the industry concerned. On the other hand there were a number of cases cited where the effect of the curtailment of the hours of labour had proved to be beneficial. One case in point is that of the Great West Garment Company of Edmonton. In the garment industry where long hours and sweat shop conditions were considered advisable a few years ago, the Edmonton Company was the first on the continent to establish the eight-hour day and the forty-eight hour week. Production records of the company actually showed a substantial increase of output with the curtailment of hours of labour. Certainly the danger of outside competition proved a bogey in that case.

In this connection I would also draw attention to the Report of the British Columbia Department of Labour for 1925. Commenting

on the operation of the eight-hour day law in that province, the report says:—

"The eight-hour day certainly has not had the dire effect predicted by some of its critics prior to its being put into effect. Information received by the department recently has proven that the eight-hour day has actually been the cause of reducing costs of operation in various industries. The reason for this is that, in order to comply with the Act, a complete reorganization of systems was found necessary and more efficient methods have been worked out."

From the records available through the Alberta Bureau of Labour, it is found that approximately eight per cent of the wage earners in industry and commerce in the Province, are now employed at forty-eight hours a week or less. From this it should be apparent that the shorter working week has been proven to be advisable and generally economically sound. It has been argued that since such a large percentage have already secured the forty-eight hour week without legislation, it is reasonable to suppose that the remaining twenty per cent will secure the same advantages as soon as it is economically advantageous for them to have them. But that argument is not a sound one. There are short-sighted and grasping employers who need the force of legislation to compel them to conform to standards that have generally been accepted as proper. This has always been the case. A case in point is that of the building or general contracting industry. The large majority of the employees of this industry work forty-eight hours a week or less. Yet there are some employers who compel their workmen to exceed the hours generally worked. Apparently only legislation can bring uniformity in such cases. In British Columbia the operation of the eight-hour law reduced the average working hours in the contracting group by 2.41 hours per week: this in spite of the fact that the eight-hour day generally prevailed in the industry before the law came into effect.

Many of the firms objecting to the establishment of the eight-hour day in Alberta admitted under examination that it was only in emergencies that it was necessary to exceed a forty-eight hour week. Others gave evidence to the Commission that was at variance with their declarations to the Bureau of Labour as to the hours of labour worked. In all I am convinced that an examination of all the evidence submitted will, if exaggerated hypotheses are omitted, show that only a very few industries would be in any way adversely affected by the establishment of eight-hour day in legislation. On the other hand a large number of employees would be benefitted.

This latter contention is borne out by the experience in British Columbia. It has been claimed that, because of the large number of exemptions allowed, the B.C. Act is largely inoperative. But in spite of this the report of the Department of Labour shows that the operation of the Act in the first year resulted in a reduction of over four per cent in the duration of the average working week; average hours being reduced from 50.59 to 48.26 weekly. Though the report does not say so, it may be presumed that a substantial part of the reduction has been caused by the bringing about of uniformity in industries where the eight-hour day generally prevailed before the legislation came into force. Because there is a substantial number of employees working longer hours unnecessarily in industries where the eight-hour day generally prevails, I am particularly opposed to the recommendation against any step to establish the eight-hour day by legislation at this time.

I am prepared to admit that there may be places of employment in the Province where it might be inadvisable to establish a rigid eight-hour day. But the evidence before the Commission certainly establishes, in my opinion, the fact that nothing stands in the way of the general application of the principle; and the fact that there are exceptions which should be made, should not be used to deprive a considerable number of workpeople of the advantages which would accrue to them if eight-hour legislation were enacted. Therefore, I entirely disagree with the conclusions of the majority report, and I would respectfully urge that the eight-hour day be established through an amendment to the Factories Act, or otherwise.

I would also recommend that Section 23 of the Factories Act be amended by striking out the proviso exempting from the hours of labour provisions, all repair shops, creameries cheese factories, grain elevators and saw mills unless such factories are situated within a city or town having a population exceeding five thousand. The Commission heard considerable criticism of the discrimination caused by these exemptions.

Edmonton, Tuesday, the fifteenth day of March, A.D. 1927.

Respectfully submitted,

(Sgd.) E. E. ROPER,
Commissioner.

SOLDIERS' CIVIL RE-ESTABLISHMENT IN CANADA

An account of the work carried on in Canada for the benefit of ex-service men is given in the annual report of the Department of Soldiers' Civil Re-establishment for the fiscal year ending March 31, 1926. The volume and extent of this work shows little or no reduction from that in previous years, and no diminution is expected for some time. The Department continues to grant vocational training where it is found necessary, and to carry on, with the Employment Service of Canada, the placement of disabled ex-service men wherever possible. In addition to this service four Rehabilitation Committees were in operation, these being at Toronto, Montreal, Edmonton and Vancouver. Considerable sums continued to be disbursed for the relief of destitution, but the total of $337,402 for the year under review represented a reduction of $68,926 from that for the previous 12-month period. The number of patients on the strength of the Department at the close of the year was 3,097, this number including 1,374 medical and surgical cases, 648 tuberculosis cases and 1,075 mental cases. Of these cases, 1616 were receiving treatment in the eight departmental hospitals and the remainder were in other institutions in Canada and elsewhere. The services of the medical staff of the Department were still in great demand for out-patients or clinical treatments, the number dealt with during the year averaging 2,581 per week. Some reduction in the activities of the Medical Service resulted from a new rule which took effect during the year transferring to the Board of Pension Commissioners the power of decision as to whether a man's disability is attributable to service.

Workmen's Compensation.—The report contains a statement on the experience in connection with the order in council issued in 1922, under legislation of that year, authorizing the Department, in case of an industrial accident to a returned soldier in receipt of a pension of 20 per cent or upwards, to reimburse the employer, or the Workmen's Compensation Board, the cost of any compensation paid, including the cost of medical service rendered necessary by the accident (Labour Gazette, March, 1923, page 310). The order also authorized the Department to refund to employers any assessments paid in respect of such employees, and to deduct the same from any compensation payable through the Workmen's Compensation Board to the province concerned.

Contrary to the expectation that the cost of this legislation would be considerable, the report states that the total amount paid since the order was passed has been less than the original appropriation which was intended to cover less than one year. "This has been due, largely, to the fact that Workmen's Compensation Boards have not taken full advantage of the provisions made and in three provinces, namely, Quebec, Saskatchewan and Prince Edward Island, there are no Workmen's Compensation Boards. The statement for the past year however, indicates that legislation is becoming more generally known and thus the claims are increasing. The payments during the fiscal year now completed, though greatly in excess of those made in the previous fiscal year, do not represent all the claims received. The appropriation was exhausted and it was necessary to carry forward

AMOUNTS PAID BY DOMINION GOVERNMENT FOR WORKMEN'S COMPENSATION IN RESPECT OF RETURNED SOLDIERS

	No. of Claims		Amounts Paid		Employers' Assessments Reimbursed	
	Years 1921-26	Year 1925-6	Years 1921-6	Year 1925-6	Years 1921-6	Year 1925-6
			$	$	$	$
Quebec	.....	.....	.....	.....	.....	.....
Nova Scotia	32	7	3,287	1,258	423	.....
New Brunswick	.....	.....	.....	.....	.....	.....
Ontario	502	164	83,581	36,794	.....	.....
Manitoba	62	42	15,634	13,740	1,000	587
Saskatchewan	7	5	4,017	319	.....	.....
Alberta	157	42	29,607	21,514	50	6
British Columbia	1	1	248	248	1,034	531

some $20,000 for future payment. The principal reason for this legislation was to place the war-disabled man in a preferred position when seeking employment. That this result has been accomplished is evidenced by the very large number of men in this category who are now regularly employed."

The accompanying table shows the number of claims, the amounts paid and the assessments reinbursed by provinces during the past five years and in the fiscal year 1925-6.

Employment and Rehabilitation.—Under an arrangement made through the Department of Labour with the Employment Service of Canada, special consideration is given to the placing of disabled ex-service men in employment. It is stated that the linking up of the service which was formerly rendered by the Department of Soldiers' Civil Re-establishment with the Employment Service of Canada has worked out very satisfactorily. During the fiscal year under review there were under this arrangement 17,973 applicants for work, and 9,902 placements. In regard to positions in the Dominion Civil Service the Department has been in constant touch with the Civil Service Commission with the object of assisting disabled ex-service men to obtain employment in the civil service.

Vocational Training.—The report states that it was found necessary during the fiscal year to continue to provide training to a limited number of returned men, chiefly because of an increase in war disability which prevented the men from carrying on either in their pre-war occupation or in the occupation for which they had been previously trained. Practically all training at this time is given with firms sufficiently interested in the trainee to guarantee him an appointment on completion of the necessary training period, which in most cases does not require more than a few months.

Advantage was taken during the year of the provisions of Order in Council P.C. 2944, which enables the department to obtain permanent appointments in the civil service for disabled soldiers by giving them a short period of training in the position which they are to occupy. This provision, it is stated, has proved of great value in placing disabled men in the civil service. The number of men placed in this way was not large, but this was chiefly because suitable vacancies were scarce. The Civil Service Commission, it is stated, co-operate in every way possible to make the provisions of this order in council a success.

Sheltered Employment.—The department continues to operate vetcraft workshops where Canadian pensioners who are unfit for employment in the general labour market are eligible for admission, subject to certain conditions. The hours of work are more or less determined by the physical condition of the worker, who is given proper care and tuition and encouraged to feel his responsibilities. The ultimate endeavour is to have him regain his self-confidence and work ability and to fit him for regular employment outside.

Vetcraft shops are in operation at Toronto, Hamilton, London, Kingston, Halifax, St. John, Montreal, Winnipeg, Vancouver and Victoria. The latter four are operated by the Canadian Red Cross Society under the direction of Workshop Committees on the basis of a uniform agreement which has been entered into with the department. This provides that 85 per cent of all approved capital expenditures shall be borne by the department and 75 per cent of the operating loss up to a maximum of $30 per man per month. On April 1, 1925, the department took over the operation of the St. John Workshop and on November 21, 1925, it became necessary to take over the Halifax one also. Negotiations are at present under way and the department is making an inventory preparatory to taking over the operation of the Winnipeg shop from the Red Cross Society.

The Toronto and Hamilton workshops specialize in the manufacture of porcelain top and plain kitchen tables, washboards, wooden kitchen ware, and a very complete line of wooden toys and juvenile furniture. They have built up a very large connection and the Halifax and Winnipeg shops are now operating along the same lines. At St. John the shop has been equipped for the manufacture of box shooks and every effort is being directed at present towards the development of export business to the British and foreign markets.

The shops operated by the Red Cross concentrate more along the lines of special orders and repair work.

All the poppies and wreaths which are distributed and sold on Armistice Day each year are manufactured in Vetcraft workshops and give considerable work to men who otherwise would be practically unemployed. The yearly requirements are approximately 1,250,000 small poppies, 150,000 large poppies and 2,500 wreaths of various types.

The number of men on strength as at March 31, 1926, was 287, distributed as follows:—

Red Cross Workshops: Montreal, 28; Winnipeg, 28; Vancouver, 33; Victoria, 32.

D. S. C. R. Workshops: Halifax, 14; Kingston, 10; Toronto, 96; Hamilton, 31; London, 8; Saint John, 7.

WORKMEN'S COMPENSATION LEGISLATION OF THE UNITED STATES AND CANADA

BULLETIN No. 423 of the United States Bureau of Labour Statistics (Department of Labour) is a complete handbook of nearly 700 pages on Workmen's Compensation laws in the United States and Canada as they existed on July 1, 1926. Nearly thirty-five years ago the United States Commissioner of Labour undertook the first official study in that country of the subject of the compensation of workmen for injuries. At that time, compensation for industrial accidents had been established by law in only two countries, Germany in 1884 and Austria in 1887. Other nations were considering the subject, but in none of them had the movement passed beyond the stage of commissions and discussion. The method of "workmen's compensation" for accidents and in many cases for industrial diseases also, has since become almost universal. The Bulletin contains valuable historical information on the progress of the movement. It also analyses the various laws, giving the major part of the actual text. The whole of Canada and all but five of the United States and the District of Columbia are now covered by compensation laws.

In most of the States the benefit is a percentage of the average wages, ranging from 50 per cent in 16 States to 66⅔ per cent in 12 States. Maximum totals are prescribed in a number of States, ranging from $3,000 to $7,800 for death and from $3,000 to $10,000 for permanent total disability. Some States establish no limit, so that considerably larger amounts are available according to duration of life and number of dependents. The insurance of the liability incurred under the acts is required in all but 3 jurisdictions, 19 States providing State funds for this purpose, 8 of them being exclusive in their operation.

The Bulletin points out that compensation legislation began sooner in Canada than in the United States, "due undoubtedly to the influence of Great Britain." It analyses the Canadian Acts, comparing their main characteristics with those of the laws in the United States. Some of the more important differences are the following:—

1. In Canada there is a noticeable uniformity among most of the compensation laws. This uniformity applies to the scope of the acts, benefits, injuries covered, administration, and procedure. In the compensation acts of the United States many variations are in evidence.

2. In Canada all of the laws are compulsory as to the employers coming within the scope of the act. In the United States only 14 are compulsory, while 32 are elective.

3. In Canada the scope of the law in each province (Yukon Territory excepted) is limited to enumerated employments, though the lists are quite inclusive. There is some diversity in the number of such employments, but the principal hazardous industries are covered, including manufacturing, mining, construction, and transportation. In the United States only 12 States limit their scope to the so-called hazardous industries, while 34 States cover industries generally.

4. In Canada occupational diseases are compensable in every province except Quebec and Yukon Territory* Such diseases, however, are limited to those enumerated in the statutory schedule. In the United States only 12 of the 46 State laws include occupational diseases, but in 6 of these all occupational diseases are covered.

5. In Canada all of the provinces except Quebec and Yukon Territory* have exclusive State insurance funds. In Ontario, however, employers under schedule (municipalities, railroad, express, telephone, telegraph and navigation) are permitted self-insurance. In the United States only 8 of the 46 compensation States have exclusive State funds, while 11 have competitive State funds.

6. In Canada probably the most significant characteristic of compensation legislation is the assumption of liability on the part of the province having insurance funds for the solvency of such funds, any temporary deficit being made up from other provincial funds. Under no law of any State of the United States is such liability assumed.

7. In Canada the workmen's compensation boards have exclusive and final jurisdiction over all compensation matters, no appeal to the courts being permitted except in New Brunswick and Nova Scotia. In these two provinces appeal may be had to the supreme court upon questions of law, but only with the permission of the judge of said court. In none of the American States has the administrative commission full decision, appeals to courts being allowed on questions of law in every jurisdiction, and of fact in some.

8. In Canada members of the workmen's compensation boards hold office during good behaviour, except that in British Columbia

* Saskatchewan also should be excepted.

the term of office is 10 years. In most of the provinces, however, they are subject to compulsory retirement at the age of 75. Each board is authorized to appoint its officers and employees and to fix their salaries. The term of office of such employees is subject to the pleasure of the board. In the United States the term of office of compensation commissioners is usually 3, 4 or 5 years.

9. As regards liberality, the benefits of the Canadian laws are about on a par with the more liberal of the American acts. The scale of benefits average perhaps somewhat lower, but the periods for which benefits are paid are as a rule longer. In Canada, except in Yukon, compensation is paid during disability or until death or re-marriage of the widow, while in most of the States the compensation periods terminate at the end of 300, 400 or 500 weeks, though some pay during life. In none of the provinces (Yukon Territory excepted) is the waiting period over 1 week, and in most of the laws compensation when payable begins from the date of the injury, whereas in the United States, 4 States have a waiting period of ten days and a like number of two weeks. The early Canadian laws did not provide for medical benefits, but all except that of Yukon Territory have now made provision therefor; in the United States all the laws require medical service.

WORKMEN'S COMPENSATION IN ONTARIO

Rates of Assessment of Various Industries for Workmen's Compensation in Ontario in 1927

THE Workmen's Compensation Board of Ontario recently published in pamphlet form a table showing the provisional rates of assessment for 1927 for each industry coming under the act. The adjusted rates for 1926 are also shown the variation in the amount levied being based on the accident record of the several industrial groups. The method of procedure in determining the assessment rates is fully explained in the pamphlet.*

The assessments are levied provisionally upon the estimated payroll. Estimates below $200 are assessed at that amount. For the purpose of assessment each industry is regarded as a unit, but certain operations are segregated, such as building, railway construction, mining, iron and steel manufacture, logging, etc.

The rates for a few of the larger industries, and for others in which the rates have been altered, are shown in the following table:—

TABLES OF RATES FOR CERTAIN INDUSTRIES PER $100 OF PAY-ROLL

Class	Industry	1926 Adjusted	1927 Provisional
		$ cts.	$ cts.
1	Logging, woods operations, river driving, rafting, booming, or loading, as a business or in an industry in this class, n.o.s.	3 50	3 50
	saw mills, shingle mills, lath mills, or rossing plants as a business or in an industry in this class, n.o.s.	2 75	2 75
2	Pulp mills	2 25	2 00
	Pulp and paper mills	2 10	1 85
	Paper mills, not manufacturing wood pulp	1 60	1 50
3	Furniture, manufacturing	80	70
4	Planing or moulding mills or sash and door factories	1 60	1 60
5	Silver mining	3 00	3 00
	Gold mining	4 00	4 00
	Nickel or nickel-copper mining	4 00	4 00
	Mining, n.o.s.	4 00	4 00
	Shaft sinking	4 50	4 50
	Gun-powder, nitro-glycerine, dynamite, gun-cotton, cordite, or other high explosives, manufacture, or shell testing, involving discharge or explosion	5 00	5 00
6	Sand, shale, clay, or gravel pits, or sand sucking	4 50	4 50
	Quarries, as a business—stone crushing	5 00	5 00
	Gravel quarries, with machine power	3 00	3 00
7	Rolling mills or steel works, with blast furnace	1 80	1 50
	Rolling mills or steel works, without blast furnace	1 50	1 50
8	Foundries, n.o.s.	1 70	1 70
	Foundries, steel	1 80	1 80
	Foundries, malleable iron	1 20	1 40
9	Structural steel, iron, or metal fabrication of	1 50	1 50
	Ship building or repairing, including boiler making	2 25	2 25
	Boiler making, as a business	2 40	2 40

TABLES OF RATES FOR CERTAIN INDUSTRIES PER $100 OF PAY-ROLL—*Concluded*

Class	Industry	1926 Adjusted	1927 Provisional
		$ cts.	$ cts.
10	Machine shops	90	90
	Wires or cables, insulated, manufacture	1 00	1 00
	Bolts, nuts, nails, or screws, manufacture	70	70
11	Agricultural implements, manufacture	1 00	0 90
	Automobiles, manufacture and assembling	50	50
	Aerial testing or flying or demonstrating, in an industry in this group	10 00	10 00
	Ice business, natural ice, cutting and storing, as a business or in this industry	2 50	2 50
	Drugs, medicines, dyes, extracts, pharmaceutical or toilet preparations, perfumes, non-corrosive acids, non-hazardous chemicals or chemical preparations, manufacture	40	40
14	Packing Houses or abattoirs	80	80
15	Dairy products, manufacture	1 00	1 00
	Bakeries	70	70
	Sugar refineries	90	90
	Operation of distilleries, or breweries, including manufacture of spirituous or malt liquors, alcohol, or methylated spirits	1 00	1 00
16	Tanneries	1 25	1 25
17	Weaving manufactories; textile, fabrics, cloth blankets, canvas, bags, felt, hair cloth, or hair goods manufacture	60	60
19	Printing and publishing, including incidental job work	25	25
21	Road or street making or repairing or culvert or small bridge construction	2 50	2 25
	Bridge construction, n.o.s	3 75	3 75
	Sewer construction or tunnelling	4 00	4 00
	Waterworks systems, construction of	3 50	3 50
	Blasting works, as a business	5 00	5 00
	Caisson work, as a business	6 50	6 50
	Firemen or policemen (by application)	2 00	2 00
22	Electric power or transmission lines, construction of	2 25	2 25
23	Structural steel, erection of	6 00	5 00
	Canal construction	4 50	5 00
	Railway construction, exclusive of bridge construction	4 50	5 00
	Railway operation	4 50	4 75
	Dredging, subaqueous construction, or pile driving	4 50	5 00
	Fishing	1 50	1 60
	Stevedoring	2 25	2 40
	Dry docks, operation of	2 25	2 40
	Wharves, operation of or work upon	2 25	2 40
	Navigation (by application)	2 25	2 40
	Loading or unloading of cars	1 50	1 60
24	Brickwork or stone masonery, n.o.s	1 60	1 60
	Plastering	1 25	1 25
	Carpentry, n.o.s	1 60	1 60
	Painting, n.o.s	1 20	1 20
	General construction where the business of the employer includes several of the operations included in this class	1 60	1 60

UNITED STATES ENACTS COMPENSATION LAW FOR LONGSHOREMEN

An Act to provide accident compensation for harbour workers in the United States was passed by Congress and signed by the President on March 4, and will become effective on July 1. An account of the position of longshoremen under previous legislation was given in the Labour Gazette, October, 1926, page 930. The new measure provides compensation to the extent of 66⅔ per cent of the wages of the employees, with a maximum of $25 a week for maintenance and a minimum of $8 a week. The limit of compensation that may be paid in any one case is fixed at $7,500. Dependent children are to receive compensation up to the age of eighteen. The scale of benefits is based on the schedule in the Workmen's Compensation Act of the State of New York, which contains the largest group of shore workers. Employers are to insure payment of accident compensation by any of the common authorized methods. Administration of the act is through local federal deputies, acting in co-operation with state compensation officials if the latter choose to assist, all being under the supervision of the United States Employees' Compensation Commission. Provision is made also for assistance in rehabilitating disabled workmen and for the promotion of the work of accident prevention.

The bill which has now become law was originally drafted by the American Association for Labour Legislation acting in co-operation with the International Longshoremen's Association. The *American Labour Legislation Review,* published by the former Association, makes the following comments on the new act in its issue for March, 1927:—

"Ten years of persistent effort are thus rewarded with success. Since 1917 a third of a million harbour workers—engaged in the extremely hazardous tasks of loading, unloading

and repairing vessels at the dock—have been 'in and out' of compensation protection, or left in a legal 'no man's land' in which they were practically without remedy when injured on board a vessel at the dock.

"When the States in 1911 first enacted workmen's compensation laws, they included harbour workers as a matter of course. But in 1917 the Supreme Court held by a five-to-four decision that when injured on board a ship, the accident was 'maritime' and therefore outside of state jurisdiction. Twice Congress attempted to bring the workers thus injured specifically under the state compensation laws. These efforts, despite their characterization as 'statesmanlike' by the minority justices, were held in divided opinions by the Supreme Court to be beyond the authority of Congress in that such power delegated to the States would interfere with the proper harmony and uniformity of the maritime law. The remedy, as finally suggested by the court, lies in the extension of federal protection to the harbour workers.

"The new act is of large significance. It rescues injured harbour workers from a position that from any point of view was indefensible. It closes up a conspicuous gap that still remained in compensation legislation in America. It establishes an important principle of legislation, necessitated by our division of jurisdiction between the federal government and the various states, this time in connection with 'maritime' employment. It extends workmen's accident compensation for the first time into those five states in the South that still remain without state compensation laws. It should stimulate legislation by North Carolina, South Carolina, Florida, Arkansas and Mississippi where the Association for labour legislation has been urging state action. It is the first federal workmen's compensation for private employees, although the Association drafted and secured the adoption of a federal act in 1916 protecting the half million civilian employees of the government. Seamen and railwaymen in interstate commerce are not included in the new law—they were not yet ready to come in with the harbour workers—but the operation of the act should be of assistance to these two groups in determining their future policy."

President Chlopek, of the International Longshoremen's Association, in an article contributed to the same issue also comments on the fact that before the enactment of the new law there were only three main groups of workers in the United States who were outside the benefits of workmen's compensation, namely, railway workers engaged in interstate commerce, seamen, and longshoremen. He states that the railway workers and seamen prefer the federal Employers' Liability Act to the state compensations acts. Moreover the seamen are provided with compensation of a kind through the ancient maritime law of maintenance and wages to the end of the voyage.

Scholarships for Farm Workers

The British Government has decided to continue for a further term a scheme of scholarships for the sons and daughters of agricultural workers, which was adopted experimentally in 1922 for a period of five years. Candidates must be (*a*) sons or daughters of agricultural workmen, or of working bailiffs and small-holders whose means are comparable with those of agricultural workmen; (*b*) *bona fide* workers in agriculture; (*c*) sons or daughters of rural workers whose means and method of livelihood are comparable with those of agricultural workmen. The value of the scholarships is such as will enable students to attend the courses without cost to their parents. There are two main grades of scholarship, namely, junior scholarships for short courses in agriculture, horticulture, dairying, or poultry-keeping, at farm institutes; and senior scholarships for diploma or degree courses in an agricultural or allied subject at agricultural colleges or universities, or for courses in veterinary science at veterinary colleges. Provided a sufficient number of suitable applicants is forthcoming, there will be awarded this year about 120 junior scholarships, ten extended junior scholarships, and ten senior scholarships. The closing date for the receipt of applications is April 30.

Nine trade unions are now registered under the Trade Unions Act (Revised Statutes of Canada, 1906, chapter 125), namely, the Canadian Brotherhoods of Railroad Employees; Brotherhood of Canadian Pacific Express Employees; L'Union Nationale des Ouvriers de la Rive Sud; Syndicat National Catholique des Employés des Magasins; Musicians' Protective Association of Montreal; Canadian Association of Railway Enginemen; Vancouver and District Waterfront Workers' Association; Canadian National Plasterers' Union of Montreal, Local No. 3; Mine Workers' Union of Canada.

ORIENTAL POPULATION OF BRITISH COLUMBIA

A SURVEY of the oriental population of British Columbia as at the end of 1925 has been published by the provincial Department of Agriculture. It is estimated that there were in the province at that time 25,216 Chinese, 19,455 Japanese, and 1,103 Hindus, or a total of 45,774 people of oriental races. These figures are based on the statistics of the last census of the Dominion, on immigration records, and on natural increase as shown by the provincial vital statistics. Since the last census the natural increase of Chinese in the province has practically been at a standstill, an aggregate surplus of 62 births in three years being offset by an aggregate surplus of 41 deaths in the other two years. It is different in the case of the Japanese. In the same period of time the aggregate increase in the Japanese population of the province through the excess of births over deaths has exceeded that through immigration. In each year the births have greatly outnumbered the arrivals from Japan, in 1925 the proportion being 15 births to every eight arrivals by sea. The birth rate of Japanese in British Columbia is 40 per thousand of the population of that race. The report moreover suggests that not all the Japanese births are recorded. The birth rate of the whole population, excluding Indians, keeps about 18 per 1,000, while the rate of natural increase per 1,000 is between 9 and 10.

The approximate proportion of orientals to the total population of the province at June 1, 1925, is estimated at 82 in every 1,000. In recent years there has been a tendency among the Chinese to distribute themselves throughout other provinces of Canada, but practically all the Japanese and Hindu immigrants have remained in British Columbia. Some features of the Japanese immigration are noted in the report:—

"Attention might be drawn to the immigration figures of Japanese, and their bearing on the problems of increase in school population of this race. There has always been a high proportion of female immigrants from that country, but since 1909, with the exception of two years, more females than males have entered the province annually. In the aggregate, from April, 1909, to March 31, 1925, the proportions were 5,111 females to 3,957 males. To the end of 1925 this continued in the ratio of 2 to 1 and presumably the same has been true of 1926. This has been chiefly due, no doubt, to the admission of so-called 'picture brides,' and possibly in some cases to wives of men already in the country coming later. In regard to 'children,' it must be remembered that this description covers all under 18, which age in the oriental is marked by a greater advance towards adolescense than in the case of the white races. There is little doubt that the great majority of these are not 'children' in the sense in which the word applies to most other immigrant races, but are potential competitors in industry from the moment of arrival."

Oriental Land-Holders.—Returns from municipal and provincial assessors show that oriental land-owners hold property in the province to a total assessed value over $11,500,000. It is difficult to estimate how much land or improved realty is held under lease by orientals. In regard to land holding in rural municipalities the report states that "to a considerable extent the Japanese are owners of the land they till, while the Chinese lease from, presumably, white owners. The reason for this is, of course, the well-known fact that Chinese methods of cultivation exhaust the soil, rendering it necessary for them to move on periodically to fresh acreage."

Orientals in Industry.—The number of orientals employed in various industrial occupations in the province in 1925 are stated as follows:—Chinese, 6,981; Japanese, 3,591; Hindu, 788. During 1925, 288 orientals were employed underground in the coal mines, 226 being Chinese and 62 Japanese. There were also 244 employed above ground, all Chinese.

The proportion of orientals to the total number of employees in the major industries in British Columbia for the years 1919-1925, were stated by the Minister of Labour of the province in answer to a question in the Legislature on January 17, 1927, as follows (no information was available concerning agriculture):—

	per cent
Lumbering—	
1918	39.68
1919	40.71
1920	30.10
1921	27.15
1922	25.63
1923	22.34
1924	21.78
1925	20.46
Mining—	
1918	14.52
1919	15.62
1920	11.55
1921	15.46
1922	8.56
1923	8.04
1924	6.73
1925	6.18

Fish Canneries—	*per cent*
1919	24.09
1920	27.79
1921	32.56
1922	30.58
1923	35.48
1924	31.65
1925	37.29

The proportion of Chinese, Hindus and Japanese in these industries was as follows:—

Lumbering—	*per cent*
Chinese:	
1918	24.18
1919	25.47
1920	18.16
1921	15.49
1922	14.46
1923	12.68
1924	11.40
1925	11.06
Hindus:	
1918	3.41
1919	4.76
1920	3.38
1921	3.19
1922	3.61
1923	2.79
1924	3.47
1925	2.42
Japanese:	
1918	12.09
1919	10.48
1920	8.56
1921	8.47
1922	7.56
1923	6.87
1924	6.91
1925	6.98

Mining—	
Chinese:	
1918	12.05
1919	12.49
1920	10.21
1921	11.44
1922	7.63
1923	5.66
1924	5.56
1925	.05
Hindus:	
1923	0.54
Japanese:	
1918	2.47
1919	3.13
1920	1.34
1921	4.02
1922	1.02
1923	1.84
1924	1.17
1925	1.18

Fish Canneries—	*per cent*
Chinese:	
1919	16.18
1920	22.41
1921	12.35
1922	12.29
1923	15.35
1924	14.98
1925	22.33
Hindus:	
1922	0.41
1923	0.48
1924	1.35
1925	0.18
Japanese:	
1919	7.84
1920	4.65
1921	19.71
1922	19.60
1923	17.86
1924	15.42
1925	14.78

Oriental Traders.—A survey of the trading activities of the oriental races in British Columbia shows that in the entire province, in 1925, there were 3,231 Asiatics licensed to carry on business in the various professions, commercial pursuits, trades and callings for which licenses are required. Of these, 2,122 were Chinese, 1,034 Japanese, and 75 Hindus. In the cities 2,647 licenses were held, in the rural municipalities 354, in the villages 20, and in unorganized territory 142. Of the oriental license holders in the province 56 per cent are in Vancouver.

Orientals in Schools.—The attendance of children of oriental parentage at the public schools during 1925-6 was as follows:—Chinese, 1,397; Japanese, 2,477; Hindu, 20.

Fishing Industry.—The proportion of orientals to the men employed on fishing boats in the province* had assumed very large proportions, but since 1922 the Federal authorities, which control the deep sea fisheries, have been following a policy of reducing the number of licenses issued to orientals. This policy, it is stated, appears to be gradually placing this industry in the hands of white British subjects and Indians.

*The Dominion Bureau of Statistics gives the total number of men employed on fishing vessels in the province in 1925 as 9,944.

TRADE UNION MEMBERSHIP IN CANADA

Summary of the Contents of the Sixteenth Annual Departmental Report on Labour Organization

THE trade union movement of the Dominion, according to the Sixteenth Annual Report on Labour Organization in Canada, covering the calendar year 1926, which has just been issued by the Department of Labour, is made up of the following groups:—

(1) Local branches of international craft organizations, having headquarters in the United States;

(2) One Big Union, an international industrial union, with headquarters in Winnipeg;

(3) Local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with headquarters in Chicago;

(4) Non-international craft organizations, with headquarters in Canada;

(5) Independent trade union units, and

(6) National and Catholic unions.

The figures presented for the international craft union group, which includes the members of 89 organizations, shows there has been an increase in local branches of 26, and a gain in members of 6,694, the total branches being 2,011, and the combined membership of 179,267. The report from the One Big Union claims 61 local units with a combined Canadian membership of 18,665, gains of eight in units and 1,409 in members. The Industrial Workers of the World, though retaining its six branches, shows a loss in membership of 5,400, the number of members reported being 4,600. The non-international craft organizations, of which there are 20, had a loss in branches of 15, but an increase in members of 767, the branches now numbering 296 and the membership being 34,837. The independent units have decreased by two, now standing at 38, of which 33 reported a combined membership of 12,235, an increase of 70. The National and Catholic unions have increased by four, there now being 103, the combined membership of which was reported by the Federation of Catholic Workers of Canada to be 25,000, the same as reported for the two previous years. The computation of the above figures indicates a net gain in branches of 21, and an increase in members of 3,540, making a grand total of 2,515 branches of all classes of unions in the Dominion, with a combined reported or estimated membership of 274,604. The accompanying chart, which is taken from the report, shows the fluctuations in Canadian trade union membership from 1911 to 1926, the period covered by these annual reports on labour organization.

Another chart published in the report indicates that the 274,604 trade union members in the Dominion are divided by trade groups as follows:—

Railroad employees, 79,810 members, or 29.07 per cent of the total;

Public employees, personal service and amusement trades, 29,308 members, on 10.68 per cent;

Building trades, 26,877 members, or 9.71 per cent;

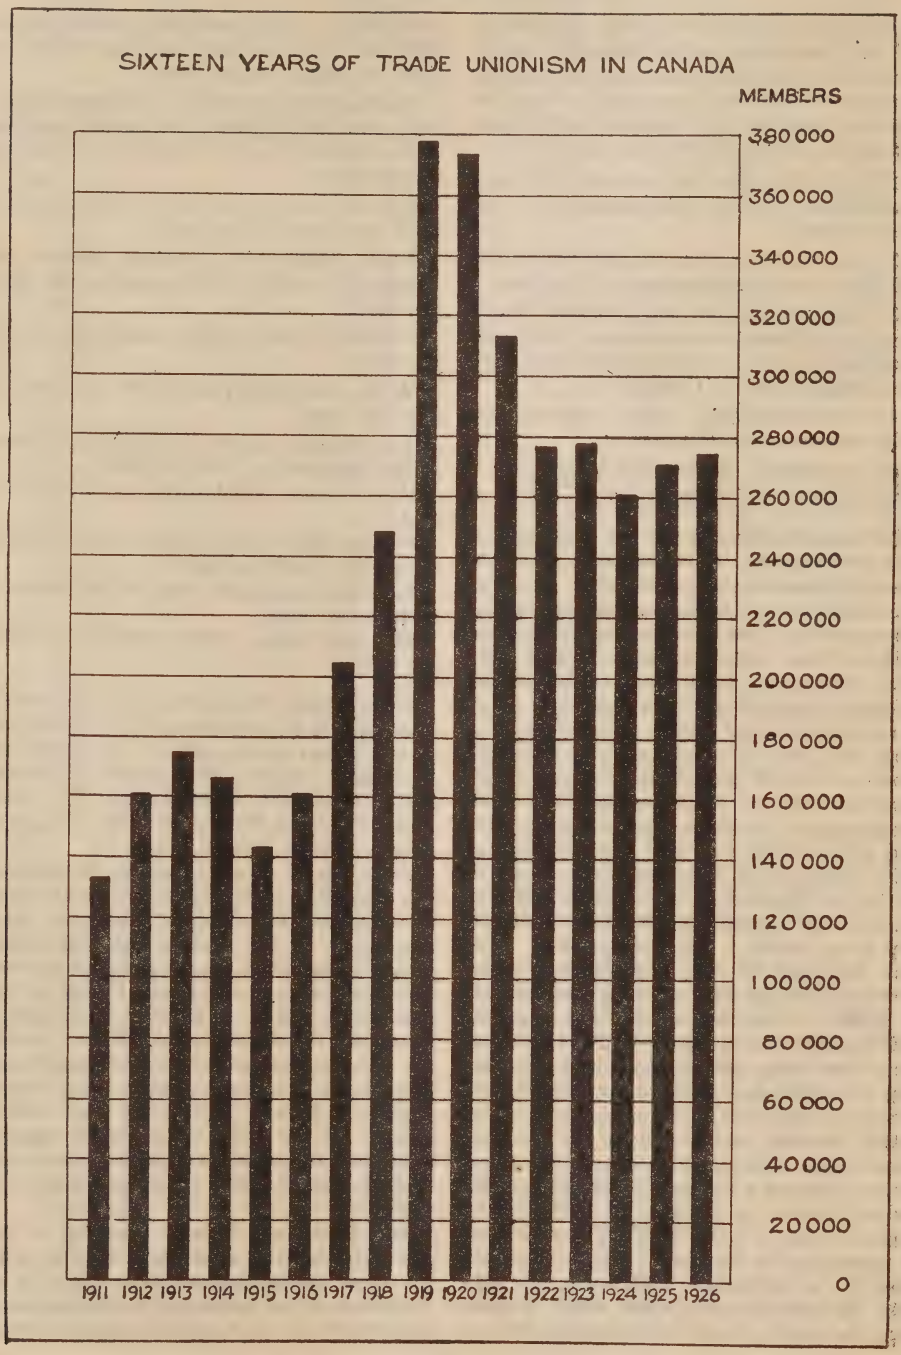
Mining and quarrying, 25,586 members, or 9.32 per cent;

Other transportation and navigation trades, 20,828 members, or 7.60 per cent;

Metal trades, 15,614 members, or 5.70 per cent;

Printing and paper making trades, 13,433 members, or 4.90 per cent;

Clothing, boots and shoes, 12,410 members, of 4.53 per cent;



All other trades, 50,738 members, or 18.49 per cent.

Trade Union Membership by Provinces.—The division by provinces of the 2,515 local branch unions of all classes is as follows: Ontario, 992; Quebec, 459; British Columbia, 249; Alberta, 232; Saskatchewan, 174; Manitoba, 160; Nova Scotia, 131; New Brunswick, 108, and Prince Edward Island, 10.

There are 30 cities in Canada in which not less than 20 local branch unions of all classes are operating, and between them they represent about 55 per cent of the local branch unions in the Dominion and contain approximately 46 per cent of the total Canadian trade union membership of 274,604. The cities of Montreal, Sherbrooke, and Quebec, besides the international and non-international branch unions and independent units, have respectively 31, 23 and 12 national and Catholic unions. If the 1,860 unions which reported their membership, 21 have 1,000 or more members, the largest union reporting having 3,700 members

The Trades and Labour Congress of Canada was originally established in 1873, and is the most representative labour body in the Dominion, being designated as the legislative mouthpiece of the Canadian organized work-

ers. The Congress has in affiliation two national organizing bodies, two provincial federations of labour, 41 trades and labour councils, 41 directly chartered unions, as well as the Canadian membership of 57 international organizations, with 1,297 local branches, the combined directly chartered and affiliated membership being 103,037.

The report makes extended reference to the various classes of delegate bodies established as a part of the plan of labour organizations in North America, and designed to co-ordinate the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the bodies represented.

Labour Organization Abroad.—Besides the information given in the report in regard to the membership of labour organizations in Canada and the United States figures are published showing the numerical strength of organized workers in 44 other countries, the total for the 46 countries being 38,388,956. Of this number about 18,000,000 (though not in direct affiliation) are sympathetic towards the principles of the International Federation of Trade Unions, with which organization the Trades and Labour Congress, with its 103,037 members, is affiliated. The following are the latest revised figures for the various countries as taken from the report:—

Argentine	120,000
Australia	729,155
Austria	1,044,068
Belgium	726,126
Brazil	104,000
Bulgaria	49,803
Canada	274,604
Chili	162,000
China	1,240,000
Cuba	100,000
Czecho-Slovakia	1,379,779
Denmark	271,676
Dutch East Indies	60,000
Egypt	12,000
Lithuania	28,250
Luxemburg	14,087
Memel	3,894
Mexico	838,000
New Zealand	96,821
Norway	94,567
Palestine	21,707
Peru	25,000
Poland	539,089
Esthonia	30,000
Finland	47,312
France	1,068,046

Revolutionary Labour Organizations are dealt with in a chapter of the report which states that the Third (Communist) International of Moscow is responsible for the establishment of the Red International of Labour Unions, a body designed to propagate communist doctrine in the trade unions. The Red International declares itself to be "an international which, together with the Communist International, will organize the working class for the overthrow of capitalism, the destruction of the bourgeois state and the setting up of the dictatorship of the proletariat; an international which will seize all the means of production and establish the communist commonwealth." The affiliate in Canada of the Communist International is the Communist Party of Canada (originally the Workers' Party), with headquarters in Toronto, which recognizes the Moscow body as the only real centre of world revolutionary activities. As an aid to the propagation of communist doctrine among the Canadian youth there is the Young Communists' League, a body which was formed under the auspices of the Communist Party, and which is affiliated with the Young Communist International of Moscow.

The official representative in America of the Red International of Labour Unions is the Trade Union Educational League. One of the objects of the league is the changing of the old-established plan of craft labour organization to what is known as industrial unionism, similar to the system in operation in Russia—one union for each industry. Adherents of the league, who are also members of trade unions, are endeavouring by a system called "boring from within," to secure support for the proposed plan of labour reorganization, following the accomplishment of which the organized workers on this continent are to be affiliated with the Red International. The report points out how the parent communist body and the communist leaders emphasize the importance of work in the trade unions, which are declared to be the natural link between the Communist Party and the working class, and that it is only through this medium that the party can permeate the labour movement. The tactics of the communists, the report states, have encountered strong opposition from the old-established trade unions, some of which, with a view to combating the communist propaganda, have expelled its advocates or outlawed "Red" organizations. In this respect Mr. Wm. Green, president of the American Federation of Labour, advises labour unions that "there is only one way to handle a communist found in a union: make public his affiliation and

expel him." Among the organizations that have dealt recently with the communist is the United Brotherhood of Carpenters and Joiners. This body warned all its members, on pain of forfeiture of membership, to refrain from joining or giving assistance to any communist body, while the attitude of the United Mine Workers of America was indicated in official instructions declaring communist organizations dual to the U.M.W., and makes any member joining such bodies liable to expulsion from the miners' union.

Among other interesting items regarding the activities of the communists both at home and abroad is the statement that the British Labour Party has once more refused to accept the affiliation of the British Communist Party, the proposal being decisively defeated.

Industrial Workers of the World.—The reference in the report to the origin and development of the Industrial Workers of the World, commonly known as the I.W.W., shows that though the organization was apparently firmly established in 1905 with a declared membership of 400,000, it has experienced such divisions within its ranks, which on three occasions have disrupted its solidarity, that at the close of 1926 the total membership had dropped to 34,450. The I.W.W. was originally intended to function as a political as well as an industrial organization, but the political plank was discarded in 1908. The organization claims to be the advocate of revolutionary industrial unionism, its chief objective being the abolition of the wage system. Repeatedly its leaders have run counter to the laws of the United States, and the report indicates the record of indictments and convictions registered against many of its adherents, chief of the indictments being that entered in Chicago in 1917, when 94 members of the organization were convicted for interfering with the execution of certain wartime measures of the United States Government. Although professing revolutionary principles, the I.W.W. has not shown any sympathy towards communism, always refusing to affiliate with the Red International of Labour Unions, the trade union adjunct of the Communist International of Moscow. There are now six branches of the I.W.W. in Canada, the same number as in 1925, with a reported membership of 4,600—a decrease of 5,400 as compared with the report for last year.

Injunctions in Industrial Disputes.—Reference is made to the persistent opposition of the organized labour movement to the issuance of injunctions in industrial disputes. It is stated that the first application for such an injunction came before a Canadian court in 1885, and that the first writ of this nature in the United States was granted in 1888. An outline is given of the origin and history of injunction procedure as it developed in the legal systems of Great Britain and Canada, culminating in the former country with the enactment of the Trade Disputes Bill, 1906, which practically precluded the further issuance of injunctions in labour disputes in Great Britain. The report also traces the development of the steady opposition of the Trades and Labour Congress of Canada to the employment of the injunctive powers of the courts as applied to strikes and lockouts, nearly every convention of the organization since 1900, with the exception of those held in the war years, supporting the executive in its emphatic opposition to the injunction process in labour disputes. The Trades and Labour Congress has concentrated chiefly on pressing for the re-insertion in the Criminal Code of those sections (which had been abolished in 1892 when the criminal law was codified) which permitted the right of peaceful picketing. In 1921, when the executive of the Trades Congress presented its annual legislative program, the position of the Federal Government in regard to the above mentioned sections was defined in a memorandum from the Department of Justice, which declared, in part:—

"That picketing, however conducted, when it consists of watching or besetting, is always and of necessity in the nature of an annoyance to the person picketed. As such, it must savour of compulsion, and it cannot be doubted that it is because it is found to compel that trade unions systematically resort to it."

Re-affirming its demands, the convention replied, in part, that "trade unions do not ask to be placed above the law," and that "the right to seek and impart information during the progress of a strike should not be so considered, unless the right to organize, bargain collectively and strike is to be also declared illegal." At its 1926 convention the Trades Congress again dealt at length with this question of picketing and injunctions, the executive council and the provincial executives being urged to press for demands for remedial action. The American Federation of Labour has similarly conducted an insistent and long campaign against the issuance of injunctions in industrial disputes, and the report details the successive steps taken by various conventions of the A.F. of L., especially since 1896, to secure curtailment of the powers of the courts regarding injunctions.

Labour Banks.—A chapter of the report outlines the progress which has taken place in

the establishment of labour banks. The first institution of the kind in North America commenced operations on May 15, 1920, as a result of the purchase by the International Association of Machinists of the Mt. Vernon Savings Bank at Washington, D.C. In November of the same year at Cleveland, the second and perhaps the most powerful of the labour banks opened up under the name of the Brotherhood of Locomotive Engineers' Co-operative National Bank. From these two conspicuous successes the report shows how rapid has been the development of labour banking, until at the close of 1926 there were 38 labour banks in operation, the total deposits of which were $108,584,597, while their combined resources amounted to $127,849,318; capitalization totalled $10,366,600, and surplus and profits aggregated $3,799,422. Of the 38 labour banks, the Brotherhood of Locomotive Engineers has established 15, the combined resources of which exceed $54,500,000. In addition to these banking institutions, organized labour is represented in the investment field with 10 investment companies, 8 of which are owned by the Brotherhood of Locomotive Engineers, which body with its 15 banks and eight investment companies, together with its interests in trust companies, is estimated to have resources approximating $150,000,000.

Labour in Politics.—A chapter of the report is devoted to indicating the development of political labour parties in Canada, and outlines the proceedings of the 1926 conventions of these bodies. In the Federal election of September 14, 1926, there were 18 candidates nominated solely under the auspices of labour political parties, and of these three were elected, all the others, with one exception, losing their deposits. In addition there was one communist nominee and three independent labour candidates who all lost their deposits. Only three Labour candidates were entered in the Ontario provincial election, one being elected. In the Alberta provincial election, the Alberta section of the Canadian Labour Party officially nominated twelve candidates, of whom five were elected. An independent labour candidate in Calgary, who opposed the choice of the Labour Party, was also elected. In 26 localities 100 candidates were nominated or endorsed for municipal office by labour political parties or organized labour bodies. Of these 44 were elected to the following positions: Mayor, 1; aldermen and councillors, 28; school trustees, 13; police commissioners, 2.

Trade Union Benefits.—The report indicates the increasing expenditures disbursed by trade unions in beneficiary features. Seven of the Canadian organizations reported payments for benefits during 1926, the total expenditure being $32,972.35, an increase of $9,788.35 as compared with the previous year. Of the 91 international organizations having branches in Canada, 60 had expenditures for one or more benefits, payments on account of death benefits being made by 55, unemployed and travelling by 8, strike by 30, sick and accident by 24, and old age pensions by 6. The total expenditure for benefits of central organizations was $22,565,857, an increase of $5,168,586 as compared with 1925. The 1926 disbursements for the various classes of benefits were as follows:—

Death	$12,684,239
Unemployed and travelling	340,421
Strike	2,218,622
Sick and accident	3,828,357
Old age pensions and other benefits	3,494,218

The report shows the amount expended by Canadian branch unions to their own members, which sums were in some instances paid in addition to the benefits received from headquarters, and in other cases covered benefits not provided for by the central organizations. The total expenditure by the 654 local branches which reported was $316,992, an increase of $33.780, as compared with the payments made by 658 branches in 1925. The disbursements for 1926 by the local branches covered the following benefits:—

Death	$105,211
Unemployed	11,513
Strike	35,590
Sick	126,162
Other benefits	38,516

Non-Trade Union Organizations.—Space is given in the report to a class of associations in no way connected with the organized labour movement, but composed in the main of wage-earners. These are considered to be of sufficient importance to justify their names being included in a report designed to show the standing of bodies of wage-earners in the Dominion. There are 80 associations included in this non-trade union group, the principal ones being composed of school teachers, Government employees and commercial travellers, the combined membership being 95,697, an increase of 5,209 over the number recorded in 1925.

The Sixteenth Annual Report on Labour Organization in Canada, like its predecessors, makes a most complete labour directory, containing as it does not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which the Canadian organized workers are connected.

ALL-CANADIAN CONGRESS OF LABOUR

An Organization of Unions not Included in the Membership of the Trades and Labour Congress of Canada

THE All-Canadian Congress of Labour had its inception in the summer and autumn of 1926, at which time officers of the Canadian Brotherhood of Railroad Employees and of some other labour bodies had been considering a plan to bring together in a central body all the national and independent unions which were not identified with the international trade union movement as represented by the American Federation of Labour and the Trades and Labour Congress of Canada. Following several conferences between representatives of the Canadian Federation of Labour and some of the other national unions, a preliminary meeting of representatives of such bodies was held in Toronto on November 22-23, 1926, at which gathering it was arranged to hold a convention in Montreal on March 16, 1927. Committees were appointed to call the convention and to draft a constitution. On February 4, 1927, an invitation was extended to all national and independent unions in Canada to send delegates to the proposed meeting, the call being signed by C. J. Whitley, secretary of the Canadian Federation of Labour, and M. M. Maclean, secretary-treasurer of the Canadian Brotherhood of Railroad Employees.

The convention, which opened in Montreal on March 16, was attended by 107 delegates, who represented the following organizations, the figures in brackets being the latest membership reported to the Department:—

Canadian Federation of Labour (9,424);
Canadian Brotherhood of Railroad Employees (14,500);
One Big Union (18,665);
Mine Workers' Union of Canada (4,036);
Electrical Communication Workers of Canada (1,400);
Canadian Electrical Trades Union (1,329);
Amalgamated Carpenters of Canada (1,419);
Canadian Federation of Bricklayers, Masons and Plasterers (1,328).

Delegates from four local unions, understood to be affiliates of the Canadian Federation of Labour, were included among those present, and represented printing pressmen and street railway employees of Toronto, railroad helpers and labourers of St. Thomas, and theatrical stage employees of Montreal.

The convention was presided over by two chairmen—D. Giroux, of the Canadian Federation of Labour), and A. R. Mosher (of the Canadian Brotherhood of Railroad Employees). C. J. Whitley, secretary of the Canadian Federation of Labour, was appointed secretary of the convention and Geo. Francoeur, of Montreal, was selected as assistant secretary. Ald. W. A. Watson, acting mayor of Montreal, extended a welcome to the delegates on behalf of the city.

The aims and objects of the new congress, as outlined in the preamble to the constitution are as follows:

Whereas we, the representatives of national and independent unions in Canada, meeting in convention in the city of Montreal, March 16, 1927, are convinced that:

(*a*) the Canadian labour movement must be freed from the reactionary influence of American-controlled unions

(b) Canadian workers require a new medium through which they may collectively promote their general welfare and raise their economic and social standards

(c) while the workers, under the present system cannot obtain the full value of their labour, it is nevertheless necessary to strive at all times to procure higher real wages and better conditions of labour

(d) it is necessary to promote among the workers a thorough understanding of working-class economics;

Therefore, be it resolved, that a central body composed of the national and independent unions of Canada be here established to give collective expression to these aims and objects.

The purposes of the Congress are stated to be to promote the interests of its affiliated organizations, and to strive to improve the economic and social conditions of the workers by their organization into autonomous bodies for economic action, that is, organization in the industrial field, by assisting the workers through education to realize the necessity of working class political action; and by furthering legislation of immediate benefit to the workers tending to increase their social and political power.

Membership in the congress will consist of affiliated national unions and chartered independent local unions, any *bona fide* union being entitled to make application for affiliation. The executive committee has full discretion as to the acceptance or rejection of any such application, subject to the decision being submitted to the annual meeting for approval or otherwise. The congress may also, at the discretion of the executive, issue charters to central councils composed of delegates from national or independent unions

affiliated with or chartered by the congress, such councils to have no representation at conventions, and not to be required to pay *per capita* fees, their purpose being to give eligible units within any particular geographical area the opportunity to meet together to advance the objects of the congress. *Per capita* from affiliated national unions was set at two cents per member per month, and for local unions directly chartered by the congress the fee is 25 cents per member per month, and 50 cents of each initiation fee to be forwarded to the congress. The basis of representation at annual or special conventions of the congress is: from affiliated national unions, two delegates representing the general executive board of such union and one delegate from each local unit; and from independent local unions, one delegate each. Two local units of the same national union or two independent local unions may be represented by one delegate.

The officers of the congress consist of a president, two vice-presidents, and a secretary-treasurer to be elected at each convention. The executive is composed of the four elected officers and three additional members elected at each convention. The general secretary-treasurer is the executive officer of the congress and receives for his services $200 per month. Organizers are to receive $6 per day and expenses not to exceed $5 per day, exclusive of railroad fare, when away from home.

The general office of the congress will be located at Ottawa, and an official publication will later be issued under the direction of the general secretary-treasurer. The congress will meet annually in the month of November, commencnig with the year 1928, when the convention will be held in Toronto.

Among the resolutions adopted were the following:—

(1) Approving the principle of the progressive reduction of the hours of labour;

(2) Opposing all and any form of military duty or training in schools;

(3) Instructing the executive to investigate an alleged violation of the Lord's Day Act by the Canadian Marconi Company;

(4) Endorsing the principle of establishing shop committees of delegates from the unions affiliated with the congress for the purpose of eliminating United States control;

(5) Providing for the co-ordination of the efforts of the various organizations comprising the congress with respect to unemployment throughout Canada;

(6) Approving unemployment insurance legislation;

(7) Pledging support to organizations instituting a campaign to organize the workers employed in the motor bus industry;

(8) Supporting the clerks and other workers of the Canadian Pacific Railway in their efforts to secure the acceptance by the company of the majority award of the conciliation board which had recommended an increase of four cents per hour;*

(9) Disapproving of the reported action of the United Mine Workers of America in offering to accept a reduction in wages in the case of the Inverness Coal Company;†

(10) Reaffirming an earlier decision to assist the Electrical Communication Workers of Canada in their struggle for recognition with the Canadian National Telegraph Service. (Labour Gazette, January, 1926, page 26.)

Two other resolutions adopted recommended (1) that the executive urge upon the Dominion Government the appointment of a representative of the All-Canadian Congress of Labour on the Board of Directors of the Canadian National Railways, and (2) that the congress and affiliated bodies make representations to the Cabinet that the next labour representative from Canada to the International Labour Conference at Geneva be nominated by the Congress.

The following were the permanent officers elected:

President, A. R. Mosher, Ottawa, (president of the Canadian Brotherhood of Railroad Employees);

Vice-Presidents: Frank Wheatley, Calgary, (president of the Mine Workers' Union of Canada), and O. Deleau, Montreal (of the Canadian Federation of Bricklayers, Masons and Plasterers);

Secretry-treasurer, W. T. Burford, Vancouver, (of the Electrical Communication Workers of Canada);

Board members: R. I. Bradley, Winnipeg, (of the Electrical Communication Workers of Canada), C. J. Whitley (secretary-treasurer of the Canadian Federation of Labour, which organization will be merged in the new congress) and S. Sykes (of the One Big Union), Winnipeg.

*The report of the Board in this case was given in the last issue of the Labour Gazette, page 259.

†See page 370 of this issue.

NOTES ON LABOUR UNION ACTIVITIES

New Brunswick Federation of Labour

THE fourteenth annual convention of the New Brunswick Federation of Labour was held in Fredericton on March 22-24, 1927, with delegates present from the various locals of all sections of the province.

President Tighe, in his opening address, claimed that some of the members of the Workmen's Compensation Board had not seen eye to eye with representatives of organized labour who had found it necessary to appear before the board with respect to certain compensation claims. The president asserted that it was labour's contention that any employee was entitled to compensation for injuries received while he was on the premises and ready to work for the company by whom he was employed, or while he was in the course of going to and from his employment, but the board had not accepted this view.

The report of the executive, as presented by the secretary, referred to the legislative program for 1926, which had been prepared and presented to the government. It also referred to the request made by the executive to have a Fair Wage Officer appointed by the Federal Government for the Maritime Provinces. The reply of the Minister of Labour was to the effect that the official located in Montreal could handle the work of such an officer. Other legislative matters recommended by the executive included provincial action to give effect to mothers' allowances, minimum wages for women, and old age pensions. Anticipating an increased provincial subsidy as a result of the recommendations of the "Duncan Report," the federation would renew their efforts towards the passage of its legislative program, which had been deferred by succeeding governments on the plea that the province was not financially able to meet the requests. The executive intimated that failing to secure legislation at the present session of the Legislative Assembly of the province for a minimum wage act, old age pensions, mother's allowance and other legislation advocated for several years, the federation would seek the appointment of a commission for the purpose of making a study of existing labour legislation in other provinces of the Dominion and make recommendations to the provincial government.*

The Hon. Premier Baxter of New Brunswick and Hon. Dr. H. I. Taylor, Minister of Health and Labour, both addressed the convention. The Premier, during the course of his address, referred to the creation of a Department of Labour and Health for the province, and to the appointment of a commission to investigate conditions in the lumbering industry. Hon. Dr. Taylor spoke of the value and benefits of organized labour and organization in any department of activity and promised to do his best to give consideration to the problems of labour.

President Tighe voiced the objection of the federation that organized labour was not consulted in the selection of a labour representative on the personnel of the Commission on the lumber industry in the province. To this Premier Baxter replied that organized labour was not concerned, as the lumbering industry was unorganized, also that a mistake would be made if organized labour sought to speak for the unorganized, as the latter would be content to remain unorganized forever, if its cause was cared for by some one else. President Tighe did not concur in this view, saying "that organized labour spoke for all."

After the general routine business of the meeting had been disposed of, the convention was adjourned and the delegates, in a body, appeared before the Provincial Government and presented the following legislative program;

Favouring mothers' allowances.

Recommending a minimum wage for women and children.

Urging a more rigid inspection of motion picture theatres.

Requesting that there be no appeal to the courts from the decision of the Board of Commissioners of Public Utilities.

Favouring public ownership of public utilities.

Recommending old age pensions.

Asking for free school books for all grades up to and including grade 8.

Urging the elimination of grade crossing on railroads.

Requesting an increase in the rate of compensation under the Workmen's Compensation Act.

Favouring the retention of the referendum and recall in civic elections.

Favouring the support of the blind apart from those in institutions.

Recommending provision for advanced polls in provincial elections for certain employees.

*A commission was appointed in New Brunswick in 1923 to investigate Mothers Allowances (Labour Gazette, June 1924, page 481).

The election of officers resulted as follows:

President, J. E. Tighe, Saint John.

First vice-president, Robert Nickerson, Moncton.

Second vice-president, George Crawford, Fredericton.

Third vice-president, S. Burns, Fredericton Junction.

Secretary-treasurer, George R. Melvin, Saint John.

An invitation was extended by the Federation to the Trades and Labour Congress of Canada to hold its annual meeting in Saint John in 1928.

Ontario Provincial Conference of the Bricklayers', Masons', and Plasterers' International Union

The twenty-first convention of the Ontario Provincial Conference of the Bricklayers, Masons, Plasterers, Marble Masons, Tile Setters, and Terrazzo Workers was held in the Labour Temple, Hamilton, Ont., on February 8, 1927, with about thirty officers and delegates present.

Mr. Walter Thorne, 4th Vice-president of the International Union of Bricklayers, Masons and Plasterers, addressing the convention, complimented the conference for being successful in establishing a harmonious feeling between the different unions in Ontario, pointing out that the influence they exercised was due to the fact that they insisted on dealing justly and fairly with all along constitutional lines. Mr. Thorne paid high tribute to the officers of the International Union, especially the president, Mr. W. J. Bowen.

The president of the conference, William Jenoves, in his address, made it quite clear to the delegates that conditions in the building industry during the past year did not warrant the expenditure of any undue amount of money or energy in organization adventures. However, there was some improvement in industrial conditions during the present year, as substantial construction under way during the month of January, 1927, was 32 per cent higher than the corresponding month last year. Mr. Jenoves referred to the strong protests which had been entered to the Provincial Government by the organization against certain proposed amendments to the Workmen's Compensation Act, and to the use of prison-made material being used for the construction of government buildings. The government, in both cases, were persuaded to change their intentions. The executive had also drawn the attention of the Provincial Government to the question of trade schools, and asked that further restrictions be placed upon them or abolished altogether.

The secretary in his report gave a general review of the activities of the organization during the past year and intimated that owing to the business depression the membership was reduced to what probably constituted the lowest level in the history of the conference.

Mr. J. McLeod, 10th vice-president of the International Union, spoke at considerable length on some of the provincial government laws, particularly referring to the Workmen's Compensation Act, which he termed to be among the best in the world. The speaker informed the conference that building construction in the west would soon be better than ever, and at the present time men were working steadily in Calgary with the temperature several degrees below zero, which he contended went to show that building construction can be successfully carried on during severe weather when proper methods are adopted. Mr. McLeod informed the delegates that it was the intention of the International Union to have a home of their own, and for this purpose the delegates at the Atlantic City convention of 1926 had provided a way to raise the necessary funds. Reference was also made to the decision of the National Board for Jurisdiction Awards, headed by the Hon. Elihu Root, which had been handed down on February 1, and which was unanimous in sustaining the Bricklayers, Masons and Plasterers International Union of America in its contentions against the Operative Plasterers and Cement Finishers Association.

Among the resolutions adopted were the following: (1) That endeavours be made, wherever practicable, to have tile setters' helpers serve an apprenticeship and carry apprentice cards in the B.M. & P.I.U. (2) Recommending that the charging of 10c. extra per hour for firebrick work be left to the discretion of the subordinate unions. (3) Deploring the manner in which buildings were being erected, especially by speculative builders and calling on local unions within the province to endeavour to enforce more rigid conditions in their building by-laws and

also a more thorough inspection by inspectors. (4) Recommending that conventions be held annually.

One of the constitutional changes to be adopted was a recommendation of the executive council that the opening date of future conventions be changed from the second Tuesday to the second Monday in February.

The election of officers resulted as follows: President, William Jenoves, Toronto; First vice-president, J. S. Barker, Hamilton; second vice-president, F. W. Jackson, Ottawa; Third vice-president, C. E. Needham, Windsor; Secretary-Treasurer, A. W. Johnson, Kitchener.

Kitchener was selected as the next place of meeting.

International Typographical Union

About a year ago the Executive Council of the International Typographical Union put into effect a ruling that all members must pay at least $1.50 per month as the old age pension and mortuary assessment, in addition to the *per capita* tax. This action of the executive council was the subject of an appeal to the civil courts by New York Typographical Union No. 6, a local of the International Union.

A temporary injunction was granted on December 8, 1926, by Justice Wasservogel, Supreme Court of the county of New York, prohibiting the executive council of the International Typographical Union from fixing dues or assessments for any classes of the membership at any figure other than that named in the constitution. The case came up for final hearing on February 24, 1927, and resulted in the temporary injunction being made permanent.

This decision means that members unemployed or unable to work for any reason, the sick or disabled, the old age pensioners, those holding travelling cards and not working at the printing business and members engaged in any other occupation than the printing trade, to the number of several thousand, will be relieved from paying the increased assessment set by the executive council for the old age pension and mortuary funds.

While the ruling, referred to above, applies only to the jurisdiction covered by the New York state courts, it was intimated by the executive council that it would be manifestly unfair to apply the restraining order only to New York Typographical Union No. 6 and to compel the members of all other subordinate unions to pay these assessments. Consequently, the old rates will prevail throughout the whole jurisdiction.

The Late David A. Carey

The death occurred on March 26, 1927, at his late residence in Toronto, Ont., of David A. Carey, a prominent labour man and for many years a member of the editorial staff of the *Evening Telegram*.

The late Mr. Carey was one of the earliest members of the Knights of Labour and was a member of the Toronto Trades and Labour Council from its inception over forty years ago. He was president of the Trades and Labour Congress of Canada for the year 1896-97, and as the representative of the Canadian Federation of Musicians, never missed an annual meeting of the American Federation of Labour since 1900. In 1905 Mr. Carey was appointed to the first board of directors of the Labour Temple Company, in which capacity he served continuously until his death. On February 19, 1927, the Labour Temple directors passed a resolution expressing regret at his continued illness, voted him an honorarium of $300, and re-elected him president for the term 1927-28. Mr. Carey was for over thirty years a member of the Separate School Board of Toronto and served as its chairman from 1920 to 1923.

At a conference recently held in Edmonton by the Workmen's Compensation Board of Alberta, the matter of poisonous gases in public garages was under review. Representatives from various firms along with those of civic garages and others interested in the subject were in attendance.

A building trades council has been formed in Edmonton with nearly all eligible unions in affiliation. The building trades council in London, which has not been functioning since 1922, was reorganized last month.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Training of Mechanics in Saskatoon

MEMBERS of the Saskatoon Builders' Exchange, recently formed, have taken up the question of technical training for boys leaving the schools and collegiates, and for young men who wish to learn the building trades and become skilled mechanics. The question was taken up at a round table discussion. It was stated that the system of serving several years as an apprentice is not adaptable to this age and country, and the builders are desirous of taking boys and young men and teaching them the practical work during the summer months and then have them trained during the winter in vocational classes. Such classes are operated in Saskatoon under the direction of the vocational committee.

A still better plan, it was stated, would be to have the builders co-operate with the proper authorities in operation of a technical school. It was felt that three or four years of study during the winters in such a school, along with practical training in the summers with the builders, would put a youth in a position to pass examinations that would give him a certificate as a skilled mechanic in the building trades. The builders declared the time was opportune for such a scheme and expressed the opinion that there was a large number of boys better adapted to this class of work than for office work.

Education and Foremanship

As evidence of the growing recognition of the importance of the foreman in American industry the Department of Manufacture of the Chamber of Commerce of the United States points to the fact that the number of courses in foremanship-training increased several hundred per cent in a year's time. It lists a total of 324 courses conducted on an organized basis from June, 1925, to June, 1926. One hundred and eighty-five of these courses were given by state vocational educational institutions, 109 were given by private agencies, and 30 as state university extension courses.

"There are reasons," the Department of Manufacture states in a bulletin on the subject, "for the rapid growth and permanent status of foremanship training. One company finds an increased production with a decreased personnel as the outstanding result which it attributes to better foremanship. Another finds, through better co-operation on the part of the foremen, a considerably reduced inventory of material in process; another finds closer co-operation between the foremen and the inspectors; another, less labour turnover due to more intelligent handling of the human element; still another, better employer-employee relations throughout; and thus we might quote many other experiences given us. There still remain some baffling problems. Accumulated experiences and results show that foreman training, to be most successful by the class or conference method, requires trained or expert direction. The large organization has work enough to keep one or more men busy all the time in improving foremanship and thus can have expert direction."

Enlarged Apprenticeship Program for the Plumbing Trade

The following is an extract from a report of a conference held in Milwaukee, Wisconsin, in January last, taken from the *Wisconsin Apprentice* of February.

A state-wide conference of considerable importance to the plumbing trade was held at Milwaukee on January 17. It was sponsored by three state departments, namely, the Industrial Commission, State Board of Vocational Education, State Board of Health, and by the National Trade Extension Bureau which is interested in plumbing and heating on a national scale. The purpose of the conference was to bring about a thorough understanding on apprenticeship matters between masters, journeymen, school and state departments, and to lay plans for a bigger and better system of apprenticeship for the plumbing trade. Some sixty-five people attended the meeting at Milwaukee. These included masters and journeymen plumbers from various parts of the state, vocational school directors, co-ordinators, and plumbing instructors, plumbing inspectors, etc. It was an all-day meeting. Members of the preliminary committee addressed the conference in the morning and the afternoon was given over to a thorough discussion of all angles of the program. It was voted to make the meeting an annual one hereafter.

Efficiency in Industry

The departmental committee of Great Britain, appointed in 1924, under the chairmanship of Sir Arthur Balfour, to inquire into "the conditions and prospects of British industry and commerce, with special reference to the export trade" have issued a third report dealing with "factors in industrial and commercial efficiency."

The present volume of more than 500 pages deals in great detail with factors affecting industrial structure, quality of production, the relation of the state and public authorities to industry and trade and certain aspects of the questions of industrial profits, burdens and costs.

Training and Recruitment.—In discussing this subject the Committee state that in order to attain the highest degree of productivity it is not only necessary that all grades of workers should work hard, but that they should work well. Thus skill in the widest sense is a factor in efficiency no less important than energy and application, and the problem of creating skill is one of the crucial problems of industry. One of the ways, sometimes insufficiently recognized, in which skill is acquired, the committee say, is the half-conscious absorption of knowledge and experience which takes place especially where an industry is highly localized, and generation after generation of workers of all grades are bred in the same industrial atmosphere.

The old traditional crafts, which are now fast being displaced by modern industrial production, propagated themselves at least as much in this way as by the definite training of apprenticeship. On a long-period view of world conditions as a whole, east as well as west, this element in the creation, preservation, and transmission of traditional skill is of the highest importance. Under modern industrial conditions, however, in a country like Great Britain, its relative range and potency have tended to diminish as compared with the more definite processes of school education and workshop training. Of these, the latter is still the more important single factor in the preparation for industry.

The prevailing types of recruitment of skilled or semi-skilled labour are classified under four main heads:—apprenticeship under indenture or written agreement; apprenticeship without written agreement; learnership; and promotion of youths engaged as labourers or attendants. With regard to agreements, for traditional and other reasons, some trades and districts and some firms within a trade adhere more than others to the old system of legal indentures, but over a large and probably increasing area of industry verbal or written agreements with their greater elasticity and greater appearance of freedom from legal restraint are now more customary.

An exhaustive memorandum on apprenticeship supplied by the Ministry of Labour shows that the principal industries in which apprenticeship is the predominant practice for the training of craftsmen include engineering and shipbuilding, building, furnishing and woodworking, pottery, vehicle-making, and certain of the distributive trades. In coal mining, heavy chemicals, and iron and steel manufacture, apprentices are only found in any number among the staff employed on maintenance work. In the textile trades and most branches of the clothing trades apprenticeship is rare. Altogether, it may be provisionally estimated that skilled industries as at present organized find places for about 300,000 lads who pass through, or at least are supposed to pass through, a more or less systematic course of workshop apprenticeship. As the most usual duration of training is five years, this appears to indicate that (if due allowance is made for wastage) skilled industry can absorb every year perhaps 80,000 such boys. The total number of boys who leave elementary schools annually in Great Britain at or about the age of 14 is in the neighbourhood of 320,000, so that it would appear that roughly one-quarter of the total number go to fill places in skilled industrial employment where they receive some form of progressive workshop training. The Committee say that it is impossible to test statistically how far the situation is normal, but it seems probable that the present annual intake is below the pre-war average. Among the factors tending to affect the intake of apprentices and learners in one direction or another the Committee note the declining birth rate, an effect which they consider will have increasing importance in the near future, and the tendency in large-scale industries towards a more and more minute sub-division of employments with a consequent decline in the proportion borne by all-round skilled craftsmen to semi-skilled or unskilled workers. It is believed that, in general, employers during recent years have had little or no difficulty in obtaining the number of apprentices whom they required. On the other hand, it is frequently stated that the number of apprentices engaged since the war has been restricted both by the hesitation of employers to engage apprentices and by the reluctance of boys to bind themselves as apprentices.

Technical Classes.—The Committee state that employers are evidently not satisfied with the existing methods of workshop training and that a substantial number of them are alive to the desirability of supplementing such training by technical classes. The memorandum states than an appreciable proportion of employers give positive encouragement by paying class fees or allowing time off; some give prizes, and a small percentage of firms, mainly in the printing trades, make attendance at classes compulsory. Others give preference to youths who have been technically trained. Facilities for instruction of some kind seem fairly well spread, but it appears that only a minority of apprentices and learners use these facilities.

Nearly 100 pages of the main report are devoted to a survey of the existing provision for education in Great Britain so far as it has the definite aim of preparing for industrial and commercial life. The Committee say that the number of boys and girls in England and Wales attending full-time junior technical schools, including pre-apprenticeship schools, before entering employment is about 12,000, and, assuming an average attendance of rather over two years, this would involve an annual intake of above 5,000. By far the greater number of ex-elementary school pupils who continue their education do so by means of part-time classes held mostly in the evening. At present there are over 4,000 evening schools (including the evening departments of technical schools) in England and Wales, attended by 680,000 pupils. These figures cover not only technical, but continuation, commercial, domestic, and other kinds of instruction, and no separate statistics are available as to the number of students studying technical subjects. It is estimated that 25 per cent of boys and 22 per cent of girls who leave elementary schools without passing on to any other full-time schools enter evening continuation schools.

So far as can be judged, the chief need at present is not merely to expand the scope and increase the number of technical classes, but to ensure the better adjustment of their relations with industry; and this can only be done by developing the co-operation between leaders of industry and educational authorities, and by thus heightening their interest in the work and increasing their feeling of responsibility therefor. In connection with commercial as distinct from technical education the Committee make special reference to the development of faculties or departments of commerce in the universities and the much more extensive arrangements of this kind to be found in Germany and the United States. It is pointed out that the present response of the commercial world in Great Britain to the educational efforts made to meet its higher requirements can at best be regarded as imperfect and uncertain.

Their review of the situation in respect of both technical and commercial education leads the Committee to remark that the process of co-ordination between the educational facilities provided and the ascertained needs of industry and commerce is in several respects imperfect. While referring, therefore, with satisfaction to the increasing amount of active co-operation which already exists in certain areas and trades, the Committee call particular attention to a suggestion that each important industry should establish machinery by which it may examine and formulate its own requirements with regard to industrial training and may co-operate with the educational authorities in ensuring that these requirements are suitably met. There is a reference to the testing of boys and girls with a view of discovering their "vocational" aptitudes in relation to the ascertained requirements of specific occupations, but it is considered too early to draw any definite conclusions from the experiments so far made either as to the validity or the utility of the tests.

The *International Labour Review* for February contains an article by Professor Erich Molitor, Leipzig, on the "protection of the workers against unfair dismissal in continental legislation." The writer points out that many European countries have already included in their legislation provisions for the protection of employed persons against unfair or unjustified dismissal, the law sometimes specifying the cases in which notice of discharge is provisionally forbidden (such as military service, sickness, accident, etc.), and sometimes the works council or other similar body being authorized to intervene. Other provisions are for the payment of wages for a minimum period from the date notice is given, or of a specified sum as compensation for possible injury suffered by the dismissed worker. The period of notice to be given, and the amount of wages or compensation which the employer is liable to pay, are usually graduated according to the worker's length of service, but there are wide differences in the systems and scales adopted for this purpose, as well as in the legal principles which underlie the choice of the solution adopted in each country.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Reduction of Accidents in Nova Scotia Collieries

At a recent "safety" meeting at New Waterford, Nova Scotia, at which the locals of the United Mine Workers were represented, Mr. Fraser, the provincial "Safety First" organizer, referred to the reduction in the number of mining accidents effected by the movement. He stated that accidents had been reduced fifty per cent in the Sydney steel works. The ratio of accidents in the Caledonia mine was only one per 10,000 tons of coal produced, while all the other collieries of the British Empire Steel Corporation had one for every 4,000 tons produced. The Caledonia record, he said, was due to insistent, honest and constant application of "safety first" principles. The New Aberdeen Mine No. 2, had had an entire month free of accidents. "No sensible man," he said, "could expect to completely eliminate accidents in coal mines. There would always be accidents peculiar to the prosecution of the industry, but they could be reduced, they had been reduced."

To further stimulate efforts along safety first lines in the Cape Breton collieries, a silver trophy will be awarded to the colliery maintaining the best safety record for the year 1927. Fourteen collieries operated by the British Empire Steel Corporation will compete for the trophy which will be awarded the colliery making the best accident prevention showing for the year as compared with its average record for the past three years. The average for the three years is taken as a basis and an index figure arrived at, taking into consideration all of the following factors: Number of accidents occurred; fatal accidents; severity of accidents; and the number of man-days the mine worked in the three years. The same factors will be taken into consideration in arriving at the 1927 records. A special committee will decide the award of the cup.

Safety Suggestion Competition for Nova Scotia Mines

A gold watch has been offered as a prize to any employee of the Dominion Coal Company, the Nova Scotia Steel & Coal Company, the Acadia Coal Company, or the Cumberland Railway & Coal Company, who sends in before June 30, the best three suggestions for the prevention of accidents to workmen in the mines. At each colliery there will be a safety suggestion box, wherein workmen are asked to report any dangerous conditions that they might come across in the mines. No officials of the corporation are eligible to enter.

The following judges will determine the first award, J. W. McLeod, president of the United Mine Workers, J. R. Dinn, manager of No. 4 colliery, D. H. McLean, superintendent of Acadia collieries, William Hayes, International Board Member, United Mine Workers, Springhill, and J. J. McDougall, superintendent of the Scotia Collieries, Sydney Mines. The members of this committee will not know the names of the makers of the suggestions until after the decision is made.

Safety in Canadian Pulp and Paper Mills

In the last issue of the Labour Gazette (page 289) it was noted that the *Pulp and Paper Magazine* was arranging for a renewal of the "Safest Mill in Canada" contest from July 1 to December 31, 1927. The standing of the mills in the 1926 contest was given by the *Magazine* in its issue of March 10. The following figures refer only to mills in Class A., i.e., those with more than 60,000 payroll hours per month, or approximately 200 employees. The accident index column does not include the effect of any fatal accident.

Name of Company	Accidents		Accident index	Average number of full time workers
	Fatal	Non-fatal		
Spruce Falls Power and Paper Company, Kapuskasing	.....	2	·040	312
Laurentide Company, Grand'Mere	.....	14	·112	1,099
Lincoln Pulp and Paper Company, Merritton	.....	7	·221	259

Textile Safety Association

The textile industry is one of the eighteen (out of a total of 24) industries in Ontario that have established accident prevention associations under section 101 of the Workmen's Compensation Act of the province. The textile class organized for accident prevention purposes on February 3, 1915, and since that time has carried on a campaign against accidents in the class, the organization being known as the Textile Manufacturers' Safety Association. A field force is maintained for the purpose of visiting the various plants and the usual plan of operation is outlined by Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations as follows:—

(*a*) The card of the representatives is sent in to the manager with a request for a few minutes discussion prior to going through the plant.

(*b*) The representative of the Accident Prevention Association discusses with the operating head of the plant the general experience of the industry and the particular experience of that plant during the past year.

(*c*) A tour of inspection is made through the plant, usually with the superintendent, and hazards that may be noted are discussed on the ground and a memorandum taken of these.

(*d*) The notes on hazards are discussed with the manager and a completion date for improvements agreed upon.

(*e*) The report is forwarded to the head office of the organization at Toronto where it is typed and sent to the manager of the plant.

In addition to the work of the field force, the head office of the organization at Toronto carries on through the mails a system of safety education.

It is the intention of the directors of the Textile Manufacturers' Association to carry on a campaign against accidents which will be based on the experience of the past.

Accidents and Compensation in Ontario during First Quarter of 1927

During March the Ontario Workmen's Compensation Board awarded a total of $497,818.24, which included $101,830.83 for medical aid. This brings the total benefits during the first quarter of 1927 up to $1,521,570, as compared with $1,380,306 for the first three months of 1926. In the first quarter of 1927 there were 16,121 accidents reported, or 1,799 more than in the same period in 1926. Fatalities in the first quarter of 1927 were 87, and 82 in the first three months of 1926. The increase in the number of accidents is due in part to improved business conditions with additional workers, and to the fact that many minor accidents of a type that were formerly not reported are now being reported to the Board. The total number of accidents reported to the Board last month was 5,597, including 31 fatalities.

Speaking of these figures, R. B. Morley, General Manager, Industrial Accident Prevention Associations of Ontario, said that cases of blood poisoning, in a number of instances, had resulted fatally, indicating that First Aid equipment was not up to the mark in some plants, or that it was not being used by injured workers. Mr. Morley called special attention to certain accidents reported, one of these being the case of a labourer who, while cleaning out a pit, was severely injured when his sweater coat caught on a shaft. This brings out the need of safe clothing for all industrial workers. Another very serious accident was the result of a leather finisher having his hand caught in an embossing machine, resulting in the loss of four fingers of the left hand. A third case was that of a foreman in a tanning plant who was caught in the belting and lost his thumb.

The reports received by the Industrial Accident Prevention Associations show a very high percentage of accidents that cannot be prevented by the installation of mechanical guards. This indicates the need for an increased campaign against accidents in many of the plants of the province. The reports from the Compensation Board prove that year by year the number of mechanical accidents are decreasing and those due to the human element are showing an increase, although, doubtless, as the workings of the Act are better understood, accidents of a minor nature that were overlooked in former years are now reported.

Deaths from Lead Poisoning in the United States, 1914-1924

The United States Bureau of Labour Statistics (Department of Labour) has published a bulletin (No. 26) on Deaths from Lead

Poisoning. Statistics are given showing the mortality from this cause by states and cities, this section including figures for foreign countries, including Canada. The statistics are further analyzed to show the industries in which the workers are exposed to the risk of lead poisoning.

The death rate from chronic lead poisoning in the United States showed a slight decline during the last seven years as compared with the seven previous years. This result, it is claimed, "obviously reflects the results of the efforts that have been made in the direction of improving factory and workshop hygiene on the one hand and the personal hygiene of the worker on the other." On the other hand the death rate among painters increased during the past ten years. This industry is credited with one-half the total mortality from lead poisoning.

The deaths in the United States registration area as distributed among the various lead-using occupations in the years 1914-1924 were as follows:—

OCCUPATIONAL DISTRIBUTION OF DEATHS FROM CHRONIC LEAD POISONING, UNITED STATES REGISTRATION AREA, 1914 TO 1924.

Occupation	Number of Deaths.
Lead workers	62
Metal miners	35
Painters	841
Paint mixers	15
Plumbers	25
Potters and tile workers	13
Rubber workers	3
Storage battery workers	5
Printers	67
Tin and coppersmiths	9
Glass industry	9
Metal workers	23
Carpenters and joiners	18
Labourers	93
Farmers	61
Professional	29
Miscellaneous	114
Unknown or retired	103
Women	48
Boys under 18	11
Girls under 18	8
Total	1,592

Protection of Longshoremen

The Vancouver Trades and Labour Council recently appointed a committee to take the necessary steps to have a tackle inspector appointed to safeguard the workers on the waterfront. The shipping Federation, it was stated, had a safety inspector, but the appointment of that official had not resulted in any reduction in the accident rate. It was claimed that the recent frequency of accidents was due to the speeding up of work, the use of faulty tackle, and the doubling of the loads formerly taken up on slings.

Safety Codes for Prevention of Dust Explosions

The United States Bureau of Labour has published in its Safety Code Series a bulletin of safety codes for the prevention of dust explosions. These standards have been adopted by the National Fire Protection Committee and the United States Department of Agriculture, and officially approved as "tentative American standards" by the American Engineering Standards Committee. A recent census of Manufactures in the United States shows that at least 28,000 industrial plants, employing over 1,324,000 persons and manufacturing products of an annual value in excess of $10,000,000,000, are subject to the hazard of dust explosions. It has been only in recent years that direct attention has been given to the determination of the causes of industrial plant dust explosions and the development of control measures. The present bulletin gives safety codes for starch factories, flour and feed mills, terminal grain elevators, sugar and cocoa factories and for the installation of pulverized fuel systems.

Accident Prevention and First Aid Suggestions

The Industrial Commission of the State of Ohio (Division of Safety and Hygiene) has published a useful bulletin under the above title, suggesting the best methods to be followed by large and small industries for promoting safety among the employees. Definite safety organization is the first essential. "Organizing for safety involves more than simply providing guards. It means that the management places the objective of accident prevention alongside of other objectives such as the maintenance of production schedule, lowest possible costs, etc., and in order that this work shall be carried on intelligently and systematically, the management makes definite provision to make accident prevention an integral part of routine operation by either placing the responsibility on an individual known as a safety inspector, or on a group of individuals known as a Safety Committee (Safety Committees), or on a combination of these two."

The bulletin points out that even in a small plant some person can be assigned as a safety inspector in addition to his other duties, such

time being allowed as may be necessary to do the work outlined above. This same person may also administer the first aid, handle the compensation, employment, etc., or his work can be confined to narrower limits. "In the small as in the large plants there can and should be a safety committee, whose chairman should be one of the highest operating officials and in addition there should be a foreman and a worker or two on the committee, these being changed from time to time in order to draw as many of the workers as possible into direct contact with the problem of safety. The duty of the committee as in a large plant, would be to review the work of the safety inspector and pass on whatever reccommendation had been made since the previous meeting for improving the safety of the plant."

The bulletin contains a First Aid section intended as a guide in emergencies when medical attention is not present or immediately available.

Achievements of Organized Safety Movement

A pamphlet published by the Pennsylvania Department of Labour and Industry under the title "Safety Organizations and Accident Statistics," summarizes the general results that have been obtained through the safety movement. "Organized safety work," it is stated, "was started about 1905. Since that time industry after industry has started a safety organization in its plant, until to-day the safety movement is actively endorsed by nearly all large and many small private corporations and companies and by many municipalities. The outstanding facts demonstrated by experience in accident prevention are: (*a*) Organized safety work pays financially; (*b*) Three-fourths of all deaths and serious injuries in industry can be prevented; (*c*) Mechanical guards in themselves alone will prevent only a small precentage of the accidents that happen in industry. The great majority can be prevented only through an organized educational effort to reach every worker, foreman, superintendent and executive."

The pamphlet points out that the value of safety organizations can only be fully realized when the present day accident records of some of the leading industries are compared with the similar records existing at the time safety records were first organized.

Voluntary Rest Pauses in Heavy Work

The Industrial Fatigue Research Board (Medical Research Council) of Great Britain has published the results of a study of rest pauses in heavy and moderately heavy industrial work. During the past few years, it is stated, much attention has been paid by the Industrial Fatigue Research Board to the effects of breaking up the usual spells of work by means of short rest pauses of definite duration and interpolated at definite intervals within the spell. The results obtained strongly suggest that in many industrial processes the judicious introduction of short pauses is not only much appreciated by the workers, but may also be followed by an increase in output of the order of 5 to 10 per cent in spite of the diminution of working time.

The chief conclusions reached are, first, that in uniform work the alternation of activity and rest naturally adopted by the worker is approximately regular; secondly, that, as would be expected, a direct relation exists between the total length of rests spontaneously taken and the arduousness of the particular work; and lastly, that, from the point of view of recuperation, rests brought about by circumstances outside the control of the subject (such as waiting for material) are ineffective in comparison with rests taken voluntarily.

"If the work is of a regular character, the men spontaneously take rests with considerable regularity, usually at about six-minute intervals; but with more varied work the rests become more and more irregular in frequency and duration. Piece-rate workers employed on work requiring a similar degree of physical energy probably take shorter rests than day-rate workers, but even in them the rests are frequent. The colliers take rests with extreme irregularity, owing to the very varied nature of their work. It would be quite impracticable to devise an artificial scheme of rest pauses for them."

The Bureau of Labour Statistics of the State of New York recently published a special bulletin giving an analysis of 100 accidents in the pulp and paper industry, with corresponding suggestions for safe practice. The bulletin states that the largest percentage of compensated injuries of any of the manufacturing groups in the State are to be found in this industry, but that it has a lower proportion of permanent disabilities than some other groups.

DRAFT CONVENTIONS AND RECOMMENDATIONS OF INTERNATIONAL LABOUR CONFERENCE BROUGHT BEFORE THE DOMINION AND PROVINCIAL GOVERNMENTS

REFERENCE was made in the July, 1925, issue of the LABOUR GAZETTE (pages 695 and 710, to certain draft conventions and recommendations which were adopted by the International Labour Conference (League of Nations) at its Seventh Session in Geneva, Switzerland, between May 19 and June 10, 1925.

The following is a list of these draft conventions and recommendations: draft convention concerning Workmen's Compensation for Accidents; recommendation concerning the minimum scale of Workmen's Compensation; recommendation concerning jurisdiction in disputes on Workmen's Compensation; draft convention concerning Workmen's Compensation for Occupational Diseases; recommendation concerning Workmen's Compensation for Occupational Diseases; draft convention concerning equality of treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents; recommendation concerning equality of treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents; and draft convention concerning Night Work in Bakeries.

The authentic texts of these draft conventions and recommendations were subsequently communicated officially to the Dominion Government and were submitted to the Law Officers of the Crown for examination and report as to whether the proposals contained therein were within Federal or Provincial jurisdiction. An Order in Council was adopted on March 9, 1927, on report of the Minister of Justice, dealing with these subjects and embodying the findings of the Law Officers, which were to the effect that the subject matters were primarily within provincial jurisdiction.

Hon. Peter Heenan, Minister of Labour, laid on the table of the House of Commons on March 31 the authentic texts of the draft conventions and recommendations in question, also the text of the Order in Council. Copies of the draft conventions and recommendations and of the Order in Council have also been forwarded officially to the respective provincial governments.

Text of Order in Council

The following is the text of the Order in Council C.P.C. 413 of March 9, 1927:—

Report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 9th March, 1927.

The Committee of the Privy Council have had before them a report, dated 1st March, 1927, from the Minister of Justice, submitting that he has had under consideration, upon reference from the Honourable the Minister of Labour, the authentic texts of the draft conventions and recommendations adopted by the International Labour Conference at its seventh session (19th May-10th June, 1925) with a view to determining whether and to what extent the subject matter of these several draft conventions and recommendations lies within the competence of Parliament or of the provincial legislatures, in order that the said draft conventions and recommendations may be brought by the Dominion Government (in discharge of its obligation under Article 405 of the Treaty of Peace with Germany and the corresponding article of the other treaties of peace) before the authority or authorities within whose competence the matter in each case lies for the enactment of legislation or other action.

The different subjects dealt with by the several draft conventions and recommendations above mentioned are indicated by their respective captions, as follows:—

I. Draft Convention concerning Workmen's Compensation for Accidents.

II. Recommendation concerning the minimum scale of Workmen's Compensation.

III. Recommendation concerning jurisdiction in Disputes on Workmen's Compensation.

IV. Draft Convention concerning Workmen's Compensation for Occupational Diseases.

V. Recommendation concerning Workmen's Compensation for Occupational Diseases.

VI. Draft Convention concerning equality of treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents.

VII. Recommendation concerning equality of treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents.

VIII. Draft Convention concerning night work in Bakeries.

1. The Conventions and recommendations numbered I, II, IV and V, seeing that they all relate to the provision of compensation for workmen or their dependents for personal injury or death due to industrial accidents or occupational diseases and matters incidental thereto, may conveniently be dealt with together. These draft conventions and recommendations look to the creation, by compulsory legislation, of certain rights or benefits for workmen and their dependents, as incident to the contracts of employment made with the workmen, in accordance with the various principles and rules set forth therein. Such, in effect, is the nature of the subject-matter of the said conventions and recommendations.

The Minister is of the opinion that, although legislation upon that subject-matter might perhaps be enacted by the Parliament of Canada in an ancillary way in relation to works and undertakings subject to its exclusive legislative authority legislative jurisdiction touching that subject-matter is primarily vested in the provincial legislatures. The Minister observes that provincial workmen's compensation laws have been held to be within the competence of the legislatures as directly engaging the subject of civil rights in the provinces and incidentally other classes of subjects assigned exclusively to the provincial legislatures by Sec. 92 of the British North America Act, 1867. *(Workmen's Compensation Board v. Canadian Pacific Railway Co.* (1920) A.C. 184, 191, 192. *McColl v. Canadian Pacific Railway Co.* (1923) A.C. 126, 135. *The Canada Southern Railway Co. v. Jackson,* 17 S.C.R. 316. *Kowhanko v. Tremblay* (1920) 50 D.L.R. 578). These legislatures are, consequently, competent to enact legislation on the subject-matter of these conventions and recommendations generally and comprehensively, subject to these qualifications; that the Parliament of Canada is exclusively competent to enact legislation giving effect to the provisions of the said draft conventions ad recommendations with relation to the officers and employees of the Dominion Government and as regards those parts of Canada which are not included within the limits of any province.

Parliament has already enacted a workmen's compensation law applicable to the officers and employees of the Dominion Government and their dependents (Chapter 15 of the Statutes of 1918 and the amendments thereto) and in view of the terms of that statute, the Minister is of the opinion that no additional legislation by Parliament will be required for the purpose of giving effect to the provisions of the said draft conventions and recommendations in relation to such officers and employees.

2. The Recommendation Concerning Jurisdiction in Disputes on Workmen's Compensation contains two articles. By the first, it is recommended that every dispute relating to workmen's compensation should preferably be dealt with by a special court or board of arbitration comprising, with or without the addition of regular judges, an equal number of employers' and workmen's representatives appointed to act as adjudicators, etc., etc.; by the second, it is recommended that where disputes relating to workmen's compensation are dealt with by the ordinary courts of law, such courts shall be required, on the request of either of the parties concerned, to hear employers' and workmen's representatives as experts in any case where the dispute involves a question of an occupational character, and in particular the question of the degree of incapacity for work.

The Minister is of the opinion that it is within the competence of the provincial legislatures to give general effect to these proposals, subject, however, to these qualifications, viz.:—

(*a*) That if a special court be constituted in pursuance of the first article above mentioned with jurisdiction or powers which are such as to make it in essence a Superior Court, then, while the constitution of such a Court is within the competence of the provincial legislatures, the appointment and payment of members or judges of the court engages exclusively the powers of the Dominion under Secs. 96 and 100 of the B.N.A., 1867; and

(*b*) That Parliament alone is the competent authority to give effect to these proposals in relation to the officers, servants and employees of the Dominion Government and as regards such parts of Canada as are not included within the limits of any province.

In view of the terms of the Dominion Act (Chap. 15 of Statutes of 1918 and amendments thereto), the Minister is further of the opinion that no additional legislation on the part of Parliament is required to give effect to the proposals of this recommendation in relation to disputes as to compensation affecting the Dominion's own officers or employees, within the several provinces.

3. With regard to the Draft Convention and Recommendation Concerning Equality of Treatment for National and Foreign Work-

ers as regards Workmen's Compensation for Accidents, the Minister is of the opinion that it is within the competence of the provincial legislatures to give general effect to the proposals thereof subject, however, to the following qualifications:

(*a*) That the Parliament of Canada is the competent authority to give effect to the undertaking mentioned in Article 1 of the convention as well as the other proposals of the convention and recommendation for such parts of Canada as are not within the limits of any province;

(*b*) That, should it become necessary to make any special arrangements with other members of the International Labour Conference regarding payments outside Canada, in application of the principle mentioned in Article I of the convention, any such arrangement would, of course, have to be made, for and as regards any province, through the Dominion Government.

(*c*) That the special agreements mentioned in Article 2 of the convention would have to be negotiated and concluded, for and as regards any province of Canada, by the Dominion Government; and

(*d*) That the Dominion Government is the proper channel of communication, for and as regards any province, with any other member of the International Labour Conference or with the International Labour Office for any of the purposes mentioned in Article 4 of the convention.

4. The Minister is of the opinion that it is within the exclusive competence of the provincial legislatures to give effect to the Draft Convention concerning Night Work in Bakeries within the provinces but that the Parliament of Canada is alone competent to legislate upon this subject-matter for such parts of Canada as are not included within the limits of any of the provinces.

The Committee concur in the foregoing, and, on the recommendation of the Minister of Justice, advise that a copy hereof, together with authenticated copies of the said draft conventions and recommendations, be transmitted to the Lieutenants-Governor of the respective provinces, for the consideration of their respective governments, with a view to the enactment of legislation or such other action upon the parts of the subject-matter of the several draft conventions and recommendations within the provincial sphere of jurisdiction, as each Government may be advised to take.

E. J. LEMAIRE,
Clerk of the Privy Council.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Tenth Session of International Labour Conference

UNDER the title "Minimum Wage-Fixing Machinery," the International Labour Office has just issued a report and draft questionnaire relating to Item II of the agenda of the Tenth Session of the International Labour Conference, which opens in Geneva on May 25. The agenda of the Tenth Session, it may be recalled, as fixed by the Governing Body of the Office in January, 1926, comprises:—

Sickness insurance.
Freedom of association.

Minimum wage-fixing machinery in trades in which organization of employers and workers is defective and where wages are exceptionally low, with special reference to the homeworking trades.

The present report and draft questionnaire have been prepared in accordance with the new procedure, known as the "double discussion" procedure, adopted by the Eighth Session of the Conference. The several stages of this procedure are as follows:—

The Governing Body places an item on the agenda of a session of the Conference. At this session the Office submits a documentary report setting forth the law and practice, followed by a draft questionnaire. The Conference holds a general discussion on the substance of the question and decides whether the matter may suitably form the subject of a Convention or Recommendation. If its decision is in the affirmative, it draws up the questionnaire to be sent to the Governments. The Conference decides by a two-thirds majority to place the item on the agenda of the following session. The questionnaire, put into form by the Office as a "Red Book," is sent to the Governments within one month. The Governments' replies reach the Office as early as possible, and in any case so that the Office can despatch the final or "Blue Report"

about four months before the Session of the Conference. At the following session, the Conference has before it the report in question, and deals with it according to the usual procedure.

Sickness Insurance.—The Eighth Session decided that, in view of the general discussion on general problems of social insurance which took place at the 1925 session, that question should be deemed to have completed the first stage of the new procedure, and the 1927 Conference might therefore, if it so desired, adopt a Draft Convention or Recommendation on the subject forthwith. A questionnaire in the ordinary form was issued on that item some time ago. A report has since been distributed by the International Labour Office containing the replies which were made by the various governments to the questionnaires. This report contains the following observations on the subject matter of the questionnaire which were submitted by the Minister of Labour of Canada in a letter dated December 29, 1926:—

> There is no legislation in existence in Canada at present establishing compulsory sickness insurance, except in respect of certain industrial diseases enumerated in the provincial Workmen's Compensation Acts. On the other hand, voluntary sickness insurance has been developed to a very considerable extent. Among the agencies which are employed with the provision of sickness insurance are the following: insurance companies which issue policies applicable to cases of sickness, frequently in conjunction with accident insurance (many of the life insurance policies now being sold also provide for payments in case of disability); fraternal benefit societies, some of which operate under federal license and others under license from the provincial authorities; sickness benefit features of trades unionism established in connection with many of the larger labour organizations; and sickness benefit schemes which have been introduced in many industrial and commercial establishments for the assistance of those employed therein.

The last mentioned report on sickness insurance proposes the adoption at the approaching session of the International Labour Conference of two draft conventions and a draft recommendation. The proposed draft conventions deal in the one case with industry and commerce, and in the other case with agriculture. The draft recommendation contains the general principles which the replies of the various governments and the experience gained in different countries have shown to constitute the best bases for the organization of a system of sickness insurance.

Wage-Fixing Machinery.—As regards minimum wage-fixing machinery and freedom of association, the general discussions are to be held this year and the final discussions and decisions are to be taken, if the Conference so desires, next year. The report and questionnaire now issued form a volume of 160 pages of a kind which may possibly become known —from the colour of the cover—as "Grey Reports." It begins by recounting briefly how this item came to be placed on the agenda in its present form. The provision of an adequate living wage, it points out, is mentioned in the Preamble to Part XIII of the Treaty of Peace as one of the problems of urgent importance which require solution. Further, the general guiding principles set out in Article 427 of the Treaty include "the payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their (the Member States') time and country."

The report goes on to survey the existing systems of minimum wage fixing and regulation in various countries; it examines the bases or principles adopted for fixing minimum wages under these several systems; it describes the methods of grouping individuals for minimum wage purposes; and it considers the problems of inspection and enforcement. This general section is followed by a succinct summary of minimum wage legislation, country by country (this is further summarized in convenient tabular form as an appendix). The general conclusions to which the Office has been impelled by the consideration of the subject are indicated in the draft questionnaire, which suggests a Draft Convention and Recommendation on minimum wage-fixing machinery in general, and a Recommendation on its application to homework trades.

Eight pages of the report are devoted to a synopsis of the minimum wage laws which have been passed in seven of the nine provinces of Canada, namely, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The first application of the principle of minimum wages was that included in the Alberta Factories Act of 1917. Legislation in the other six provinces already named followed during the next three years.

Reference is also made in the report to the investigation of the subject of minimum wages which was made by a committee of the House of Commons in 1926. This committee recommended that a conference of provincial and Dominion representatives intimately in touch with labour conditions throughout Canada should be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions of the Treaties of Peace.

The Eight-Hour Day Convention

Discussion in the British House of Commons

In the British House of Commons on February 28, it was moved by Mr. Hayday (Labour) that the salary of the Minister of Labour be reduced by £100 in order to call attention to the non-ratification by Great Britain of the Washington Hours Convention. Fourteen members, drawn from all parties, were opposed to the Government's policy and gave expression to various reasons for urging the Government to ratify this convention. One member considered that the industrial future of Great Britain depended largely upon ratification, and that the standardization and reduction of hours of labour would, moreover, do something to mitigate the problem of unemployment.

On the other hand, it was thought by some that the Minister of Labour was right to approach the question very carefully since Great Britain already had shorter hours and higher wages than any other European country. One member considered that economics would fix what hours would give the best production but that Great Britain should not be bound by any convention, while another thought that, before ratifying, the Government should have some definite understanding that Continental countries would also ratify and abide by the convention not only in the letter but in the spirit.

A Labour member said that the Government had made its position more difficult by passing the Miners' Eight Hours Act and that he saw no hope of their ratifying the convention. The Parliamentary Secretary to the Ministry of Labour stated that mining came under the convention and that, if the Government legislated to ratify the convention, the arrangements made under the Act of last year would be subjected to the new legislation.

In reply, the Minister of Labour, Sir Arthur Steel-Maitland, said that what truly mattered was not primarily ratification, but identical interpretation and adequate enforcement after ratification. There was clearly wide variation in interpretation, and for that reason the Government had invited the representatives of Belgium, France, Germany and Italy to the London Conference. An agreement was reached, but it was made clear that the powers which met did not arrogate to themselves the right of interpreting the convention, and that the British Government did not consider that the agreement necessarily fell within the four corners of the Washington Convention, though some of the other powers did hold that view. It was, however, an erroneous idea that the other nations—except Belgium—were ready to ratify immediately. The German Bill, for instance, contained material, such as the amount of payment for overtime, which, from the point of view of the British Government, was inconsistent with the Convention and inconsistent with ratification. Again, in France they had a different attitude towards many of the most important points, such as the distribution of hours and the recovery of lost time. The French employers' representative on the Governing Body of the International Labour Office had detailed a number of difficulties with which French industry would be faced if the Convention were applied; yet the French Minister of Labour had informed the Senate that, if the Convention were ratified, there was no intention of introducing any amending legislation. The British Government had proceeded in the only possible way, but it had lost six months' time owing to the late industrial dispute. The London Conference was the first real attempt to get down to the facts as regards interpretation and enforcement. As for the moral obligation, the number of Conventions for which Great Britain had voted and which she had not ratified was far less than in the case of the other European countries. The Government wished to get at the actual facts and to reach the basis of an agreement; but the German Bill and the proceedings in the French Senate had not made things easier, but more difficult. The question of ratification was under active consideration of the Cabinet at that moment, but he was not prepared to give the House a final statement. It was only by proceeding with caution that a really solid basis could be reached.

In reply to a question as to the possibility of a provisional ratification, the Minister of Labour said, in deciding whether ratification should be by an enabling Bill or by some other provision making ratification conditional upon the other nations ratifying, the Government would take into consideration the question of provisional ratification.

On a division, the motion was rejected by 199 votes to 108.

The following statement was published in the *Times* of March 8, 1927:—

It is understood that Lord Cecil has been appointed chairman of the Cabinet Committee which is considering the whole question of the Washington Forty-eight Hour Week Convention. It is hoped that, as a result of this inquiry, the decision of the Government on the question of ratification will be announced soon after Lord Cecil's return from Geneva. The general feeling among members of the House of Commons is that, as a result of last week's debate, the decision of the Government will cer-

tainly be in favour of early ratification, provided that a few technical difficulties can be overcome.

Ratification by France and Other Countries

The Bill introduced by the French Government in July, 1924, to authorize the ratification of the Hours Convention was before the Senate on February 10, 1927. The Bill consisted of two clauses, the first authorizing ratification, and the second providing that this ratification should take effect only when the Convention had been ratified by Germany. In this form, it was unanimously adopted by the Chamber of Deputies in July, 1925, and sent to the Senate. The Senate has now adopted it by 279 votes to 1, with an amendment (approved by the Government) providing that ratification shall take effect only when the Convention has been ratified by Great Britain as well as Germany. The Bill has therefore to be returned to the Chamber of Deputies, with a view to its concurrence in this amendment.

In view of the frequent reference made during the discussion to the London Conference of last year on the Convention, it may be of interest to set out the position with regard to ratification by the other states represented at that Conference. Unconditional ratification of the Eight-hour Day Convention was registered on behalf of the Government of Belgium in September, 1926. Ratification, conditional on unreserved ratification by Germany, Belgium, France, Great Britain and Switzerland, was registered by the Government of Italy in October, 1924. The Minister of Labour of Great Britain announced in the House of Commons in February, 1927, that he was not yet in a position to make any statement on the subject of hours legislation, the matter being still under consideration. Ratification by the Government of Germany will be possible after the passing of the Labour Protection Bill and the Mines Bill, which are now before the German Parliament, but will only be effected at the same time as ratification by other industrial countries of Western Europe.

EMPLOYMENT STATISTICS FOR THE UNITED STATES

THE Department recently received a book published by the Russell Sage Foundation of New York under the title of "Employment Statistics for the United States." This work is the outcome of the efforts of a committee of the American Statistical Association appointed to deal with the subject of governmental labour statistics. Under the chairmanship of Miss Mary Van Kleeck of the Department of Industrial Studies, Russell Sage Foundation, the committee, composed of representative official and unofficial statisticians of the United States, gave considerable thought and effort to the matter of employment statistics, and throughout its work had as collaborator the Russell Sage Foundation. The findings of the committee were drafted into book form under the editorship of Messrs. Ralph G. Hurlin, Director, Department of Statistics, Russell Sage Foundation, and William A. Berridge, Associate Professor of Economics, Brown University.

The volume begins with the recital of eleven specific recommendations of the committee with regard to the collection and publication of employment statistics for the United States. These recommendations may briefly be summarized as follows:—

1. That the co-ordinating centre for employment statistics in the United States should be the Federal Bureau of Labour Statistics in the Department of Labour at Washington, but that the initial responsibility for the collection of the figures should be upon the several states, such samples as are found necessary to be sent to the Bureau. Other federal departments or bureaus collecting employment figures are recommended to send them to the Bureau of Labour Statistics.

2. The data to be secured should consist of (*a*) the total number of employees on payrolls, and (*b*) the total of wages paid in one payroll period, both answers to be supplied by employers. It is recommended that data be secured at monthly periods for the payroll period including the 15th of the month, and that the following industries be covered: (1) manufacturing; (2) mining and quarrying; (3) communication; (4) building construction; (5) wholesale trade; (6) retail trade; (7) logging and lumbering; and (8) agriculture, published reports to show these main divisions of industry, together with their respective subgroups. The committee further recommends that the principle of "sampling" be employed in securing returns in order to facilitate collection and tabulation, and that separate figures for states and important cities be compiled.

3. A further recommendation suggests co-ordination with other statistics which show the trend of business activity, this co-ordination to

be secured by (*a*) promptness of publication of results, and (*b*) publication of continuous index numbers.

4. Special studies, such as employment reports divided by sex, labour turnover, total hours of employment, etc., to be made from time to time, are also recommended.

The need for and uses of employment and unemployment statistics are dealt with in considerable detail, and if it is necessary at this late date to justify the compilation of such statistics the committee's statement of the case will be found to be adequate.

Dealing with the various classes of statistics on employment and unemployment, and explaining the reason for the selection of figures based on employers' reports as the most valuable index to employment conditions, the committee treats at some length of the several classes of these statistics and their chief characteristics. In this connection it is stated:—

"Statistical measurements of employment are obtained from three main sources: (1) counts or estimates of the number unemployed; (2) statistics of demand for labour, and applications for work as registered in employment bureaus; and (3) periodic counts of the numbers of persons employed, as shown by payrolls."

While submitting that (3) is the most practical and reliable system of statistics to encourage, the committee deals concisely, and adequately, with counts of the unemployed and public employment offices returns. Experiences in the United States and other countries (including Canada) are related, and the judgment of the committee is stated to be that the collection of statistics from these two sources should be encouraged, though the results should be considered as only supplementary to those obtained from reports on the volume of employment.

In passing, it is interesting to note the views of the committee on that class of statistics known as trade union unemployment statistics. Statistics of this class it is stated, constitute one of the divisions of the general class designated "counts or estimates of the number unemployed." The committee holds the opinion that accurate trade union figures are difficult to secure, and that they are not even reliable in disclosing the unemployment situation among the classes of workers which they purport to cover. The finding of the committee in this regard is summed up in the following statement:—

"Although this committee considers these statistics distinctly more difficult to collect and less valuable for general purposes than payroll statistics, it advises their collection because among other reasons they afford a valuable check upon data on unemployment."

The question might be asked how statistics based on trade union reports, if they are not so reliable as employers' reports, can be held to be a valuable check upon the latter. The report points out in this connection that very frequently charts based on the two classes of statistics have been found to be in agreement; and if this be taken as reason for believing that one class of the statistics reflects conditions accurately, it would seem to follow that the same must be true of the other. When the trends of employment demonstrated by the two figures vary, it is not clear why one particular figure should be assumed to be accurate, and the other less accurate. However, this point does not in any sense invalidate the main finding of the committee regarding the general reliability of payroll statistics.

The last two-thirds of the book enlarge upon the procedure which is recommended for the collection, tabulation, and publication of employment statistics based on employers' reports. This section is most informative, and it makes the report a valuable hand-book for anyone whose duty it is to undertake work in connection with payroll statistics. The publication should have as its result a greater standardization of methods in the United States.

While the volume deals specifically, as the title implies, with employment statistics for the United States, and while the problem of co-ordination caused by the distribution of governmental powers in that country weaves itself intimately into the work of the committee, it is not to be thought that the findings of the committee will be useful only in the United States. In large part the sections dealing with the more general aspects of the collection and publication of employment statistics apply equally in Canada, and it is interesting to observe that throughout the committee has made use of Canadian experience, especially in the fields of employers' and trade union reports. The report is most interesting to anyone desirous of becoming fully acquainted with the precise significance of employment statistics, and it will no doubt prove itself a worth-while contribution to the not inconsiderable literature which has already accumulated on this subject. As the committee was composed of representative statisticians, the mistake of divorcing of practice from theory, which has been encountered too frequently in this field, has been obviated.

EMPLOYMENT SITUATION AT THE BEGINNING OF MARCH, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

ACCORDING to the monthly statements furnished to the Dominion Bureau of Statistics by 5,813 of the larger employers of labour throughout Canada, and analysed in the Bureau by localities and industries, there was a moderate gain in employment at the beginning of March, the upward movement being rather more extensive than in earlier years of the record. The working forces of these firms aggregated 795,163 persons, as compared with 788,148 in the preceding month. This increase of slightly over 7,000 workers caused the index number to rise from 95.4 on February 1, 1927, to 96.3 at the beginning of March, as compared with 91.5, 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The largest increases took place in manufacturing and construction, while logging, mining and trade were seasonally slacker.

Employment by Economic Areas

The trend was upward in Quebec, Ontario and British Columbia, while in the Maritime and Prairie Provinces curtailment was indicated.

Maritime Provinces.—Further but smaller declines were shown in the Maritime Provinces, where 498 employers reduced their staffs from 64,873 persons on February 1 to 64,281 at the beginning of March. Improvement was registered in manufactures, particularly in iron and steel works, and construction and transportation were also rather busier. Logging and mining, however, recorded seasonal losses. Employment on March 1, 1926, had shown an increase, which was chiefly due to the gains in railroad maintenance staffs caused by the exceptionally heavy snowfalls then reported. The index number was slightly higher than on the date under review.

Quebec.—Employment in Quebec was at a higher level than in the early spring of any other year since 1920, although the gains indicated on March 1, were smaller than on the same date last year. Statements were tabulated from 1,269 firms, whose staffs aggregated 225,063 employees, as compared with 223,515 at the beginning of February. Manufacturing, especially of iron and steel and textile products, and construction were considerably more active, while there were losses in logging and trade.

Ontario.—Further expansion on a larger scale than in previous years of the record was shown in Ontario, where the 2,674 co-operating establishments enlarged their forces by 6,074 persons to 334,100 on March 1. The situation continued to compare favourably with that noted on the corresponding date of the years, 1921-1926. Manufacturing, notably of iron and steel products, recorded considerable recovery, and construction was also more active than on February 1, 1927, as were transportation and communication. Logging, on the other hand, was seasonally slacker.

Prairie Provinces.—The curtailment shown in the Prairie Provinces involved fewer workers than the losses registered on the same date in the four preceding years, while the index was higher than on March 1, in any other year since 1920. Data were tabulated from 764 firms, who had 102,068 employees, as compared with 103,536 in the preceding month. Iron and steel, coal mining and railway transportation showed the greatest declines, while construction, lumber and pulp and paper reported improvement.

British Columbia.—Manufacturing, particularly of lumber products, recorded important increases in employment, while only small changes were noted in other industries. The working forces of the 608 reporting employers aggregated 69,651 persons, as against 68,198 in the preceding month. Reductions in personnel had been indicated on March 1, last year, when the index was somewhat lower.

Index numbers of employment are given by economic areas in Table 1.

Employment by Cities

Employment advanced in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and Vancouver, but in Winnipeg contractions were shown.

Montreal.—Continued and more pronounced gains were indicated in Montreal, chiefly in manufactures, within which iron and steel plants recorded important recovery. Construction was also busier, while trade and transportation showed curtailment. Statements were tabulated from 690 firms employing 107,741 workers, as compared with 106,280 in the preceding month. The tendency on March 1, last year was also upward, but the index then was several points lower.

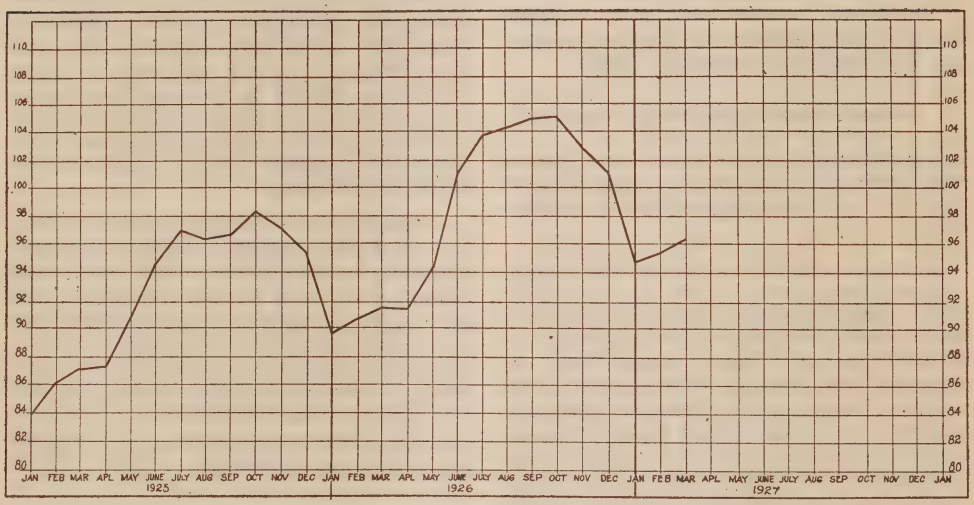
Quebec.—The improvement in Quebec, mainly in manufactures, was on practically the same scale as on the corresponding date of 1926, when the situation was not so favourable. The working forces of the 90 co-operating employers totalled 9,031 persons, or 145 more than on February 1, 1927.

Toronto.—Iron and steel and construction reported moderate gains and there were smaller increases in many other groups, while the only significant declines were in printing and musical instrument works and in local transportation. According to returns received from 772 firms, they enlarged their staffs from 96,478 persons in the preceding month to 96,706 at the beginning of March. Rather greater gains were noted on the same date last year, but the index then was lower.

Ottawa.—Employment in Ottawa showed a general advance, 137 workers being added to the payrolls of the 125 co-operating employers, bringing them to 9,555. All groups were somewhat more active than in the preceding month. The volume of employment was greater than on March 1, 1926, when losses had been indicated.

Hamilton.—Iron and steel and other manufactures registered heightened activity; 203 firms employed 28,760 workers, as compared with 28,381 in their last report. Although more marked improvement had been recorded on the corresponding date last year, the situation then was less favourable.

Windsor and other Border Cities.—Further expansion was indicated in the Border Cities; automobile factories registered most of the gain, while only small changes were shown in other industries. Data were received from 90 firms employing 11,580 persons, or 534 more than on February 1. Employment was at a higher level than at the beginning of March, 1926.



Winnipeg.—There was another, but smaller reduction in employment in Winnipeg, where 286 employers reported 27,266 workers, as against 27,415 in the preceding month. The bulk of the decline took place in manufacturing, though the changes in all industries were comparatively slight. Employment was more active than on March 1, 1926.

Vancouver.—Manufacturing, especially of lumber products, recorded substantial improvement, while trade was seasonally slacker. Returns were compiled from 223 employers, whose staffs were increased by 733 workers to 24,767 at the beginning of March. Contractions had been shown on the corresponding date a year ago; the index then was several points lower.

Index numbers of employment by cities are given in Table II.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Note.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

Table I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS AND OF DOMINION EMPLOYMENT IN MANUFACTURING

Manufacturing Industries

The trend of employment in this group continued to be upward, according to statistics furnished by 3,729 manufacturers employing 454,991 operatives, as compared with 447,406 at the beginning of February. The most pronounced recovery took place in iron and steel factories; lumber mills showed further seasonal gains on a larger scale than in previous years of the record, and there were also important increases in vegetable food, textile and non-ferrous metal works. Pulp and paper and animal food establishments, however, regis-

[1]Note.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

tered reductions in employment. Although the general increase in manufactures was rather less extensive on March 1, 1926, the index number then, and also on the same date in the years 1921-1925, was lower than at the beginning of March, 1927.

Animal Products, Edible.—Employment in this industry showed a further though smaller decline, which, however, involved a larger number of workers than that recorded on the corresponding date last year. The index number then stood at 84.1, as against 88.0 on the date under review, when the 152 reporting establishments employed 14,081 workers, or 265 less than in the preceding month. The most pronounced decline was in meat packing establishments in Quebec and the Prairie Provinces.

Leather and Products.—There was an insignificant change in employment in this industry at the beginning of March, according to statistics from 194 manufacturers, whose staffs, at 17,972, included only 31 persons more than at the beginning of February. There was a considerable increase in employment on March 1, 1926, but the index number then was between three and four points lower. Leather tanneries and glove factories were slightly busier, while boot and shoe works showed no general change. Improvement was indicated in Quebec, but Ontario firms reported some curtailment.

Lumber and Products.—Further additions to payrolls on a larger scale than in earlier years of the record were made in the lumber group, saw mills, furniture and vehicle factories reporting most of the gain. Statements were tabulated from 671 employers, whose staffs rose from 40,280 workers on February 1, to 42,034 at the beginning of March. The index number on the corresponding date a year ago was slightly lower.

Musical Instruments.—The trend of employment continued to be downward, chiefly in Ontario, but employment was in greater volume than on the same date in 1926, although gains were then recorded. The 39 co-operating establishments had 3,028 employees, as against 3,141 in their last report.

Plant Products, Edible.—Considerable improvement was reported in the edible plant product group, particularly in biscuit, confectionery and sugar factories. The firms making returns to the Dominion Bureau of Statistics, 309 in number, had 25,765 workers in their employ, or 558 more than at the beginning of February. This increase, which took place chiefly in the Maritime Provinces and Ontario, contrasts with the decline recorded on March 1, 1926, when the index number was lower.

Pulp and Paper Products.—There was a reduction in employment in pulp and paper mills at the beginning of March, and printing and publishing establishments were also somewhat slacker. On the other hand, there was a small increase in paper product factories. A combined working force of 55,224 persons was reported by the 451 co-operating manufacturers, who had 55,921 employees on February 1. Although the shrinkage registered on the corresponding date in 1926 was smaller, the situation then was less favourable than on the date under review. The greatest falling off took place in Quebec, while in the Western Provinces an upward tendency was in evidence.

Textile Products.—Garment and personal furnishing factories registered an increase in employment that exceeded the gain indicated on the same date last year, when the level of employment was slightly lower. The payrolls of the 514 co-operating establishments aggregated 74,347, as compared with 73,521 employees on February 1. Considerable improvement was shown in Quebec and Ontario, while elsewhere only small changes took place.

Clay, Glass and Stone Products.—Moderate seasonal gains were shown in building material factories, in which a high level of employment was indicated during the greater part of last year. The index number on March 1 stood at 90.2, as compared with 79.7 on the same date in 1926. Statements were compiled from 108 manufacturers employing 8,910 workers as against 8,722 on February 1. The largest increases were in Quebec and Ontario.

Iron and Steel Products.—Continued improvement on a smaller scale than on the corresponding date last year was recorded in iron and steel factories, in which the level of employment continued to be higher than on the corresponding date in earlier years of the record. Automobile and railway car shops reported the greatest gains, but there was also an upward movement in rolling mills, heating appliance and other iron and steel factories. Returns were tabulated from 639 establishments having 128,823 persons in their employ, or approximately 5,000 more than in the preceding month. The most notable increases took place in Ontario, but considerable advances were also noted in Quebec and the Maritime Provinces.

Non-Ferrous Metal Products.—Smelting and refining and lead, tin, zinc and copper works showed heightened activity; 105 firms making returns reported 15,541 workers on their pay-

rolls, as against 15,234 at the beginning of February. The bulk of this gain took place in Ontario. A rather more pronounced increase in personnel was noted on March 1 a year ago, but the index number then was over 10 points lower.

Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 228 firms had 32,063 men in their employ, or 2,710 less than in the preceding month. This decline rather exceeded that recorded on March 1 a year ago, when the index was slightly higher. There were losses in all provinces except British Columbia, but the most noteworthy decreases were shown in Ontario and Quebec.

Mining

Coal.—Employment in coal mining in both eastern and Prairie coal fields showed a falling off involving the release of a much smaller number of workers than the decreases registered on March 1, 1926; the index number then was between seven and eight points lower. Eighty-nine operators reduced their payrolls from 27,473 workers on February 1 to 26,498 at the beginning of March.

Metallic Ores.—There were moderate decreases in employment in this group, in Ontario, Quebec and British Columbia. Data were received from 47 mines employing 11,047 workers, as against 11,234 at the beginning of February. Rather greater shringage was reported on March 1 last year, and the index number then was some 14 points lower.

Communication

Telephones and telegraphs afforded slightly more employment, according to returns from 187 companies with 24,182 employees, compared with 24,025 in the preceding month. There were rather small changes in all provinces. Reductions were indicated at the beginning of March, 1926, when employment was not so active.

Transportation

Street Railways and Cartage.—Statistics tabulated from 115 employers in this division showed that they had reduced their payrolls by 175 persons to 19,014 at the beginning of March. Quebec and Ontario recorded declines, but in the Western Provinces increased employment was shown. Small additions to staff were noted on the corresponding date a year ago, when employment was in practically the same volume.

Steam Railway Operation.—Partial recovery from the seasonal losses registered in the preceding month were shown on steam railways, on which 319 more workers were employed by the co-operating companies than on February 1. They had 75,640 employees. Curtailment was indicated on March 1 last year, and the index number then was nearly four points lower. On the date under review, there were increases in Ontario, Quebec and the Maritime Provinces, while the tendency in the Prairie Provinces was retrogressive.

Shipping and Stevedoring.—A further but small contraction in the number employed in water transportation was registered on March 1, the decrease being much smaller than that indicated on the corresponding date last year. The situation then was not so favourable. Statements were tabulated from 45 firms with 10,450 men in their employ, as against 10,605 at the beginning of February.

Construction and Maintenance

Building.—The 344 co-operating building contractors reported the largest increase shown on March 1 in any year of the record; they employed 27,196 persons, or 786 more than in the preceding month. Quebec registered most of the advance. The index number was 31 points higher than on March 1, 1926, when contractions were noted.

Highways.—Shrinkage in employment on a smaller scale than in earlier years of the record was indicated in this group on March 1, when 96 employers reported 3,294 workers, as compared with 3,610 on February 1. A considerable share of this contraction took place in Quebec and the Prairie Provinces, while elsewhere there were moderate gains.

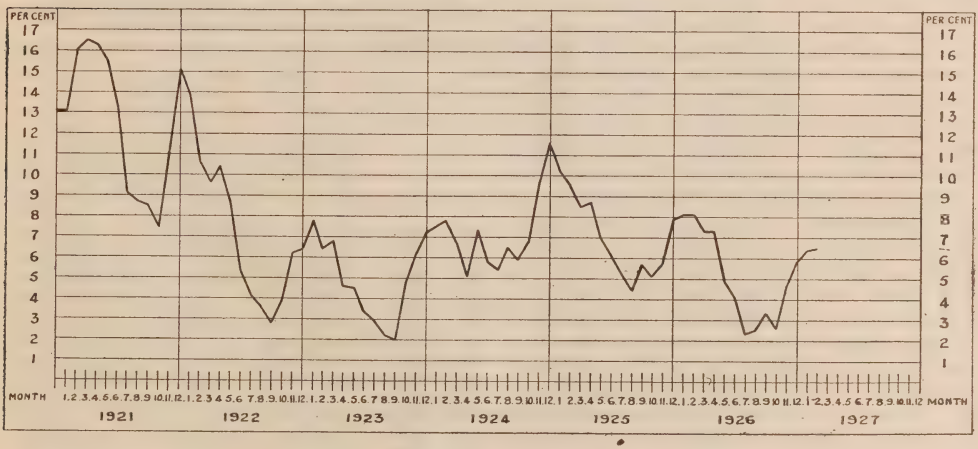
Railways.—Employment on steam railways showed an increase, which, however, was smaller than that recorded on the corresponding date last year, when the index number was several points higher. This was largely due to the fact that there were unusually heavy snow storms about that date in 1926, causing the employment of a considerable number of extra workers. Data were received from 32 concerns and divisional superintendents employing 30,499 workers, or 2,980 more than at the beginning of February. The most extensive increase was in Ontario, while in Quebec also there was improvement.

Services

The gains made in the service group were smaller than on the corresponding date last year, but the index number then was lower.

Statements were received from 167 establishments with 14,238 workers, as compared with 14,064 on February 1. There were comparatively small increases in all groups coming under this heading, the largest taking place in Quebec and Ontario.

Trade



Continued, though less extensive seasonal declines were indicated in retail trade, but the losses were smaller than at the beginning of March, 1926; employment was higher than on March 1 in any year of the record, which was instituted in 1920. The forces of the 571 stores and wholesale houses furnishing data totalled 60,341 persons, or 514 less than on February 1. Quebec registered the bulk of the reduction.

Tables I, II, and III, give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on March 1, 1927.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF FEBRUARY, 1927.

UNEMPLOYMENT as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Practically no change in the trade union situation was indicated at the end of February, as compared with that of the previous month, there being 6.5 per cent of idleness reported at the close of February in comparison with 6.4 per cent on January 31. The percentage for February was based on returns tabulated from 1,571 labour organizations with a combined membership of 162,042 persons, 10,596 of whom were out of work. Conditions prevailing during February this year were somewhat better than in the corresponding month last year when 8.1 per cent of unemployment was registered.

The accompanying chart shows the curve of unemployment as reported by trade unions by months from 1921 to date. It will be noted that the curve continued the upward trend which has been in evidence since July last year except for the month of October reflecting a slightly greater volume of unemployment. It has, however, remained on a

lower level this year than in the corresponding period last year, showing a better situation.

Of the various provinces, Nova Scotia, Ontario, Manitoba, Alberta and British Columbia reported slightly less favourable conditions among their members than in January, while in the remaining provinces the increases were also slight. Neither the gains nor the contractions in any one province were particularly noteworthy, the most substantial being the decline in Manitoba of 1.8 per cent. In making a comparison with the returns for February last year employment in the Province of Nova Scotia was in much greater volume during the period under review, due to better conditions existing in the coal mining areas of the province. Gains of much lesser volume were indicated in Ontario, Manitoba, Saskatchewan and Alberta, while in the remaining provinces there were minor declines.

A separate tabulation is also made of trade union conditions in the largest city in each province except Prince Edward Island. Of these cities Halifax and Winnipeg reported the most unemployment in February with percentages of 10.9 and 10.0 respectively, while the situation in Edmonton, where 4.4 per cent of idleness was reported, was the most favourable.

Unemployment in the manufacturing industries, as registered by 432 unions with 42,898 members, was in slightly less volume during February than in January, 6.8 per cent of the members having been unemployed as compared with 7.8 per cent in the previous month. Woodworkers reported nearly 7 per cent increase in employment, and slightly more work was afforded cigar makers, iron and steel workers, papermakers and textile and garment workers. On the other hand, leather workers were much slacker, and lesser declines were indicated among brewery and glass workers. In comparison with the returns for February last year, a lower level of employment was maintained in the manufacturing industries as a whole, due for the most part to a less favourable situation in the iron and steel trades.

Reports were tabulated from 33 unions of coal miners, with 15,010 members, and showed an unemployment percentage of 1.6 as against .4 per cent in January and 19.5 per cent in February last year. British Columbia coal miners registered a nominal change for the better in comparison with January, but in Nova Scotia and Alberta the situation was slightly adverse. As compared with the returns for February last year, Nova Scotia conditions improved greatly; the gains in Alberta were slight and the British Columbia situation remained almost unchanged. Quarry workers in Nova Scotia were slacker than in January, but slightly better employed than in February last year.

The percentage out of work in the building and construction trades, as indicated by 180 organizations having an aggregate membership of 17,364 persons was 24.3 as compared with 22.6 per cent in January and 26.6 per cent in February last year. Tradesmen in this group continued to be affected largely by the severe winter weather, which retarded building operations to some extent. Steam shovel and dredgemen, and painters, decorators and paperhangers reported a considerable amount of slackness, as compared with January, and employment for bricklayers, masons and plasterers, plumbers and steamfitters, and hod carriers and building labourers also declined. Bridge and structural iron workers, tile layers, lathers and roofers, and granite and stone-cutters, on the other hand, were afforded considerably more work, and the situation for carpenters and joiners improved slightly. In comparison with the returns for February last year, bricklayers, masons and plasterers, painters, decorators and paperhangers, hod carriers and building labourers,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

and tile layers, lathers and roofers all registered greater unemployment, but improvement, especially among carpenters and joiners, was indicated in the remaining trades.

Reports from 636 unions of transportation workers, having a total membership of 57,222 persons, reported 4.0 per cent of the members unemployed as compared with 3.5 per cent in January. There was scarcely any change in unemployment among steam railway employes, whose returns constitute over 81 per cent of the entire group membership reporting, but navigation workers were slack, especially in British Columbia, and street and electric railway employes reported the same percentage of idleness as in January. In comparison with February, 1926, when 5.0 per cent of the members were out of work, employment for steam and street and electric railway employees was in greater volume, but there were contractions among navigation workers.

Among longshore workers, for whom a separate tabulation is made, reports were received from 12 organizations, comprising 6,476 members, 8.6 per cent of whom were idle at the end of February, as compared with 11.3 per cent in the previous month.

In the public employment group with 134 unions reporting a membership of 12,293 persons, the percentage out of work stood at 1.5 as compared with an unemployment percentage of 1.3 in both January, 1927 and February, 1926. Civic employees were not quite so fully engaged as in either of the months used for comparative purposes.

In the group of miscellaneous workers, where reports were tabulated from 97 unions with 5,287 members, 6.5 per cent of the members were idle, as compared with 6.6 per cent in January. Increases in the percentage of unemployment were reported by hotel and restaurant employees and theatre and stage employees, but more work was afforded barbers and stationary engineers and firemen. In comparison with February last year the situation among hotel and restaurant employees and stationary engineers and firemen was better, but theatre and stage employees and barbers were slightly less active.

Lumber workers and loggers reported no unemployment, as compared with 1.6 per cent of idleness in January. Fishermen were afforded slightly less work.

Table I on page 432 summarizes the returns by provinces for February of each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and table II on page 433 represents the percentages of unemployment reported in the different groups of industries for the same months.

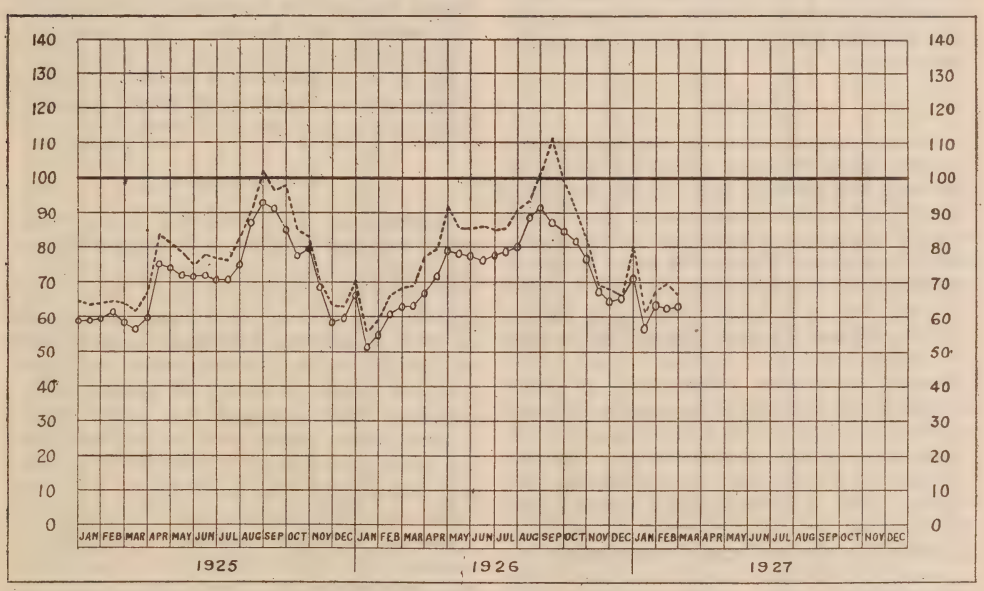
EMPLOYMENT OFFICE REPORTS FOR FEBRUARY, 1927

THE volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1927, as indicated by the average daily placements effected, showed a decline of 8 per cent from that of the previous month, while an increase of 2 per cent was shown when compared with February, 1926. The changes in both comparisons, both adverse and favourable, occurred for the most part in the logging industry, though the February, 1927, records also showed increased placements in the farming industry, which, however, were partly offset by declines in the construction and maintenance group.

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies in relation to applications showed a slight rise during the first half of the month, but declined somewhat during the latter half, while the curve of placements in relation to applications showed practically no variation throughout the month. The ratio of vacancies to each 100 applications was 69.7 and 66.4 during the first and second half of February, in contrast to the ratio of 66.2 and 68.6 during the same periods in 1926. The ratios of placements to each 100 applications during the periods under review were 62.5 and 63.1 as compared with 60.7 and 62.8 during the corresponding month of 1926.

The summary of the reports from the offices showed that the average number of applications reported during the first half of February, 1927, was 1,241 daily as compared with 1,282 daily during the preceding period, and with 1,249 daily in the corresponding period of 1926. Applications for work during the latter half of the month registered 1,234 daily, in contrast with 1,203 daily during the latter half of February a year ago.

Employers notified the Service of a daily average of 864 vacancies during the first half, and 819 during the latter half of the month under review, as compared with a daily



average of 827 and 826 vacancies during the month of February, 1926. Vacancies offered to the Service during the latter half of January, 1927, averaged 867 daily.

The Service effected a daily average of 775 placements during the first half of February, of which 498 were in regular employment and 277 in work of one week's duration or less as compared with a total average placement during the preceding period of 813 daily and with 758 daily during the first half of February, a year ago. During the latter half of the month under review placements averaged 778 daily (497 regular and 281 casual) as compared with an average of 756 daily during the corresponding period of 1926.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927 (2 months)	26,356	13,588	39,944

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

During the month of February, 1927, the offices of the Service referred 19,920 persons to vacancies and effected a total of 18,633 placements. Of these the placements in regular employment were 11,932, of which 9,106 were of men and 2,826 of women, while the placements in casual work totalled 6,701. The number of vacancies reported by employers numbered 13,170 for men and 7,018 for women, a total of 20,188, while applications for work totalled 29,678, of which 20,848 were from men and 8,830 from women.

Nova Scotia

The demand for workers as indicated by orders listed at offices in Nova Scotia during February was nearly 3 per cent greater than in the preceding month, but over 15 per cent less than during the corresponding month last year. Placements were 6 per cent higher than in January, but over 12 per cent less than in February, 1926. Mining, services and trade were the only groups in which more placements were made during the month under re-

view than in February last year. Construction and maintenance showed the most noteworthy decline under this comparison. Industrial groups in which most of the placements were effected during the month were manufacturing 57; trade, 80; and services, 342, of which 193 were of household workers. Placements in regular employment numbered 77 of men and 81 of women.

NEW BRUNSWICK

During February orders received at employment offices in New Brunswick called for nearly 25 per cent less workers than in the preceding month and nearly 51 per cent less than in the corresponding month of 1926. Placements showed approximately the same percentage of decline in each comparison, Reduced activity was general in all industrial groups. Nearly 70 per cent of the placements effected during the month were in the services group, and of these the majority were household workers. During the month 96 men and 62 women were placed in regular employment.

QUEBEC

Orders listed at offices in the Province of Quebec during February called for nearly 23 per cent less workers than in the preceding month, but showed an increase of over 13 per cent in comparison with the corresponding month last year. Placements were nearly 18 per cent less than in January, but over 25 per cent in excess of February, 1926. The logging industry showed the most noteworthy increase in placements over February last year, although gains were recorded in all other groups except manufacturing, construction and maintenance and trade. Industrial groups in which most of the placements were effected during the month were: manufacturing, 96; logging, 458; construction and maintenance, 347; and services 390, of which 313 were of household workers. Regular employment was procured for 820 men and 411 women during the month.

ONTARIO

Opportunities for employment and placements effected by offices in Ontario during February were less than in the preceding month by nearly 13 per cent and 14 per cent respectively, but showed a nominal gain for both when compared with February last year. Placements in all industrial groups showed a small change from February 1926 and for the month under review included: manufacturing, 1,040; logging, 1,621; farming, 435; transportation, 215; construction and maintenance, 1,874; trade, 321; and services, 2,649, of which 1,765 were of household workers. During the month 3,992 men and 1,012 women were placed in regular employment.

MANITOBA

There was a decline of over 16 per cent in the number of positions offered through offices in Manitoba during February when compared with the preceding month but a gain of 29 per cent in comparison with the corresponding month last year. Placements were nearly 15 per cent less than in January, but nearly 22 per cent higher than in February, 1926. All industrial groups except manufacturing and transportation participated in the gains in placements over February last year, and in these the reductions were nominal only. The most note worthy gains were in logging and farming. Industrial groups in which most of the placements were effected during the month included: manufacturing, 70; logging, 646; farming, 512; construction and maintenance, 119; trade, 138; and services, 1,246, of which 920 were of household workers. Placements in regular employment numbered 1,262 of men and 462 of women.

SASKATCHEWAN

Employment opportunities as indicated by orders received at offices in Saskatchewan during February were over 2 per cent less than in the preceding month, but over 20 per cent greater than during the corresponding month of 1926. There was a decrease in placements of nearly 3 per cent in comparison with January, but a gain of nearly 28 per cent when compared with February last year. All industrial groups except services participated in the gains over February, 1926, those in farming, construction and maintenance and trade being the most pronounced. Placements by industrial divisions included: logging, 98; farming, 550; transportation, 81; construction and maintenance, 215; trade, 99; and services, 614, of which 419 were of household workers. During the month 873 men and 310 women were placed in regular employment.

ALBERTA

During the month of February positions offered through employment offices in Alberta were nearly 13 per cent less than in the preceding month, but nearly 8 per cent higher than during the corresponding month last year. There was a decline of 13 per cent in placements in comparison with January but a gain of nearly 13 per cent when compared with

*5 placements effected by offices since closed.

February, 1926. Logging and manufacturing showed the most substantial gains in placements over February last year; the only declines worthy of note were in construction and maintenance and services. Industrial groups in which most of placements were effected during the month were manufacturing, 181; logging, 672; farming, 331; construction and maintenance, 113; and services, 457, of which 250 were of household workers. Placements in regular employment during the month numbered 1,294 of men and 245 of women.

British Columbia

There was a decline of nearly 8 per cent in the number of positions offered through offices in British Columbia during February when compared with the preceding month, and of over 15 per cent in comparison with the corresponding month last year. Placements were nearly 9 per cent less than in January, and nearly 18 per cent less than during February, 1926. The reductions in placements from February last year were general; all groups except transportation and trade showing declines, and in these the gains were small. Placements by industrial divisions included: manufacturing, 182; logging, 285; farming, 98; transportation, 112; construction and maintenance, 225; trade, 99; and services 607, of which 374 were of household workers. During the month 692 men and 243 women were placed in regular employment.

Movement of Labour

During February, 1927, the offices of the Employment Service of Canada effected 11,932 placements in regular employment of which 6,950 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,449 were granted the Employment Service reduced transportation rate, 984 going to points within the same province as the despatching office and 465 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices granted special rate certificates to 183 persons, 158 of whom went to employment within the province and 25 to other provinces. Of those travelling within the province Montreal sent 157 bushmen and Quebec one blacksmith to lumber camps in their respective zones. The interprovincial transfers were from Hull, including 22 bushmen for the regions around North Bay and 3 bushmen for Cobalt logging districts.

The certificates issued by Ontario offices numbered 392, of which 332 were provincial and 60 interprovincial. Fifty-nine of the interprovincial transfers were for bushmen going to th Hull zone, 31 from North Bay and 28 from Sudbury, while from North Bay also, one bushman travelled to employment in the Montreal zone. Of those going within the province 268 were bushmen, the greater number of whom went to the logging districts around Port Arthur, Fort William, Timmins and Sudbury. From Fort William 25 construction labourers and from Port Arthur 2 construction labourers were despatched to points within their respective zones and from North Bay 8 construction men travelled to Timmins. The Port Arthur office despatched one machinist to Hamilton and 3 miners within its own zone, the Sudbury office 2 miners to Cobalt, 6 miners to Fort William, one carpenter to Timmins and one miner and one cook to Ottawa, and the Windsor office sent 2 die makers to Oshawa. Niagara Falls received 2 steam shovel engineers and Fort William one farm labourer from Pembroke, Ottawa 7 machinists from Timmins and Port Arthur one surveyor and Sudbury one chef both from Toronto.

In Manitoba 537 transfers at the reduced rate were effected, all by the Winnipeg office and of these 167 were for provincial points and 370 for other provinces. Within the province the transfers to the Brandon zone included 112 farm labourers, 4 farm generals, 2 cleaners, 2 cooks, one chambermaid and one kitchen maid, to the Dauphin zone 7 farm labourers, 9 bushmen, one cook and one porter, while those going to employment within the Winnipeg zone were 24 farm labourers, one ranch cook, one hotel cook and one housekeeper. The Port Arthur zone received the bulk of the interprovincial transfers including 316 bushmen, 7 carpenters, one pipe fitter, 2 bakers, 2 cooks, 18 building labourers, one hoisting engineer, one blacksmith and one maid, while Estevan received 8 farm labourers, one farm general and one chambermaid, Regina and Yorkton 6 and 4 farm labourers respectively and Moose Jaw one farm housekeeper.

In Saskatchewan 97 persons benefited by the reduced rate, 96 of whom were for provincial points. Of these 57 were bushmen, practically all for parts around Prince Albert and 29 were farm labourers, 14 for the Saskatoon zone and the remainder scattered throughout various parts of the province. In addition, Regina sent

one stationary engineer, one labourer and one cook to employment in the Prince Albert zone and the remaining 7 were hotel and household workers. The one interprovincial transfer was for a tailor despatched by the Regina office to employment in Brandon.

The offices in Alberta transferred 188 persons at the reduced rate, 184 to points within the province and 4 to other provinces. The latter were farm labourers, Edmonton sending 2 to Saskatoon and one to North Battleford and Calgary one to the Regina zone. Provincially the transfers from Edmonton included 130 bushmen, 9 miners, one handyman, 2 sawyers, one hotel cook, one maid, 7 farm labourers, 7 mill hands and 2 mine labourers, all of whom were going to points within the Edmonton zone and one plasterer, one carpenter and one handyman to Calgary. The movement from Calgary included 9 bushmen and one farm labourer for Edmonton, one bushman and one farm labourer for Drumheller, 2 building construction labourers for Lethbridge, 2 bushmen for Medicine Hat and 4 bushmen and one farm labourer for the Calgary zone.

Workers taking advantage of the Employment Service reduced rate in British Columbia numbered 52, of whom 47 were for provincial points and 5 for other provinces. Within the province Vancouver transferred one engineer and one sawyer to Prince George, one waitress, one cook, one millwright, one sawyer, one setter and 8 miners to Penticton, one carpenter, 2 bricklayers and one cook general to Nelson, one tool sharpener, one orderly, one machine miner and one farm hand to Kamloops, one cook to Cranbrook and 3 miners within the Vancouver zone. Nelson despatched 5 miners to Cranbrook and one tie maker within its own zone, Prince Rupert 4 miners and 2 samplers and Prince George 8 tie makers to employment within their respective zones. Of those going outside the province New Westminster transferred one farm hand and one farm cook to the North Battleford zone and Vancouver one farm hand to each of the Saskatoon, Edmonton and Lethbridge zones.

Of the 1,449 persons who benefited by the Employment Service reduced rate 1,007 travelled by the Canadian National Railways, 352 by the Canadian Pacific Railway and 90 by the Temiskaming and Northern Ontario Railway.

BANKING POLICY AND UNEMPLOYMENT

THE annual report submitted by Mr. McKenna, Chairman of the Midland Bank, to a meeting of shareholders in January, contained much of interest for the question of unemployment.

The task which Mr. McKenna set himself in the report was to answer the question: "Why is it that for the past six years we have suffered from trade depression and unemployment of almost unparalleled severity, while America has enjoyed great and increasing prosperity?"

The report deals at length with the manner in which monetary and banking policies have influenced the trade situation in the one country favourably, in the other unfavourably, from 1921 onwards. "Monetary conditions," it states, "exercise such an all-pervading influence that in investigating a matter of this kind (differences in trade activity) we are forced to turn our attention to them and, as we find that from 1921 onwards there was a wide divergence between English and American monetary policy, we have in this fact at least a partial explanation of the phenomenon."

The chief difference exhibited in the policies in the two countries, in Mr. McKenna's view, was that, whereas in the United States bank credit has since 1921 been expanded freely and continuously to carry an increasing volume of trade, there has been no such expansion in Great Britain. On the contrary, although there has been no actual restriction of credit in the latter country, the basic circumstances have been such as to make its condition one of continuous deflation. In explanation, the report adds:

"For close upon seven years we have had an army of unemployed in this country, never less than a million, at one time over two millions, and at present nearly a million and a half. Every year the normal growth of population adds roughly 200,000 to the number of our people capable of productive labour of one kind or another. In order fully to occupy our people, an immediate increase of banking credit—that is, of money—is indispensable for carrying the larger volume of commodities which the unemployed and the new recruits to labour will produce. To check the growth of credit when the population is steadily increasing, and vast numbers of men and women are out of employment, is obviously to cut off all hope of trade expansion, unless prices are continuously lowered. But we all know what

falling prices mean to trade in these conditions. They spell stagnation, from which the sole means of recovery is a reduction in wages. It may be true that, with falling prices, the reduction would be in nominal more than in real wages; but I think our experience has taught us sufficiently the difficulty of effecting any reduction at all, and that what actually ensues when the volume of money decreases is long-continued trade depression. Stationary or even insufficiently expanding money supplies, with a growing population struggling to find employment, represent in truth a condition of deflation."

Mr. McKenna's final conclusion is that the urgent need for the present is for the thorough investigation of the British monetary system with a view to its careful adaptation to the requirements of trade and employment.

"The vital need for the future is to ensure that the maintenance of prosperity, with a growing population and ever-improving standard of living, both requiring an expansion in the volume of trade, shall not be hampered by false restrictions on the quantity of money. We need careful and expert consideration of the theoretical basis and practical technique of our credit and currency system, including the position of the Bank of England as the central institution and custodian of our monetary resources."

Unemployment Relief in Winnipeg

A report of the Winnipeg committee on unemployment relief has been received, giving details of the work carried on during the winter months of 1925-6. The report calls attention to the exceptional position of Winnipeg on account of the large numbers of men employed on the land during summer, who come to the city to spend the winter months. The following resolution on this subject was submitted by the committee to the Dominion government in this connection:—

> That the attention of the Minister of the Interior of the Dominion Government be called to the large number of experienced, unemployed, farm workers who are located in Winnipeg, urging consideration of the matter, with a view to adopting an effective "Back to the Land" assistance plan, which would aid these men to the general good of the country. If there are any means whereby the above recommendation can be put into effect, advantage should be taken of them.

The report states that beginning in November the city was confronted with the problem of relieving men who were physically unfit for heavy work, which was only available outside the city. The Social Welfare Commission relieved 22 families for that reason in November. Later the men returning from work in the country were unable to secure work in the city, and most of their past earnings were expended on immediate needs, leaving them nothing for the winter months. Towards the end of November the city unemployment committee was obliged to request the Social Welfare Commission to relieve cases of need. The provincial minister of public works announced that the province would participate in the cost of relief on the same basis as in the previous year, this being one quarter of relief and one half of administration and transportation. Later the province, in order to comply with the terms of the federal government policy, increased its share to one-third of the total expenditure for relief. By Privy Council Order No. 315 the federal government agreed to pay for the first three months of 1926 one-third of the cost of supplying food, shelter, clothing and medical assistance providing the provincial government would bear an equal proportion (Labour Gazette, March, 1926, page 232).

Some features of the work are described in the report. In December, the Improvement Committee recommended that consideration be given to the spreading of crushed stone on streets and lanes. This work, if feasible, would provide work for the unemployed and benefit the city. Following the report from the city engineer, work commenced on streets used as approaches to the city. At the same time a display advertisement was placed in the papers and petitions circulated for streets and lanes where the citizens desired the work done. The number of hours worked by the applicants for relief was governed by the quantity of supplies required, and the plan proved very satisfactory; the only difficulty being that there was not sufficient work to keep all the men engaged. The much better feeling towards this plan by the men was very noticeable and it eliminated the degrading effect of accepting doles without doing any work. In addition to this, the committee had on the staff a man whose work it was to secure every available job in the city and country. By personally interviewing employers of labour, many were placed in work for the rest of the season, and more valuable still was the securing of permanent work for some who had been on unemployment relief for several winters. Several

families who had come from farms for various reasons were sent back to them. One man, with his family, was placed on a homestead of his own choosing, and repairs for the shack supplied and a cow purchased. This man realized his opportunity to be self-supporting was on the farm.

During the winter 4,662 persons were relieved, as compared with 12,395 in the previous winter. Single men and married men without children were not eligible for assistance, as formerly. Rent was paid only where the family was threatened with a bailiff seizure or where a notice of eviction was served. Several applicants received only one order, further relief being refused when they refused to comply with the condition that they must work for their supplies.

The policy of the Social Welfare Commission of referring all applicants less than one year in Canada to the Dominion Immigration Office, by letter, was carried out, giving that Department an opportunity to establish these applicants who, in most cases, came into the country with the intention of going on the land.

The report concludes as follows:—"If the co-operation of the federal government in establishing on farms those who came to Canada to farm could be secured, and an active campaign carried on to that end during the winter of 1926-27, some constructive work, which would benefit the country in proportion to the benefit to the individual family, could be done. Is it not as important to establish as self-supporting, self-respecting citizens those who are in our country and know conditions, as it is to bring immigrants to Canada and establish them on farms? 550 of these registered declared their knowledge of farm or bush work."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

St. John, N.B.—St. John Printing and Publishing Association and International Typographical Union, No. 85.

Agreements to be in effect from April 30, 1926 (newspaper), and June 30, 1926 (job offices), until June 30, 1928, allowing up to thirty days thereafter for negotiation of new agreement.

Only union members are to be employed, provided the union endeavours to secure competent help. Failing such help, other help may be employed, subject to approval of union, until places can be filled by union members.

Job offices: overtime and holidays, time and one-half. Sundays, double time.

Newspaper offices: overtime and holidays (Dominion Day, Labour Day and Christmas Day), time and one-half; Sundays, double time.

Hours: book and job offices, 44 per week; newspapers, day work, 8 hours; night work, 7½ hours. No piece-work to be allowed.

One foreman to an office, who shall consider applications.

Differences not settled by an employer and a committee of two from the office shall be referred to an arbitration committee of three, one from each party and a third selected by them, the decision to be final and binding. Local union laws not affecting wages, hours or working conditions, and laws of the International Union shall not be subject to arbitration.

Wages: day work, book and job, all foremen, linotype operators and machinists, not less than $34 per week; floor hands and monotype keyboard operators, $31.80. Newspapers—all foremen, linotype operators and machinists, not less than $35 per week; floor hands, $33 per week. Night work, all foremen, operators and machinists, not less than $38 per week, floormen, $36.

Apprentice Scale: Third year, two-fifths journeyman's pay; fourth year, one-half; fifth year, two-thirds. One apprentice to six journeymen on newspapers; one to four in job offices, with not more than three in an office.

Apprentices must serve five years before being admitted to journeyman membership in Union. Registered apprentices shall be given same protection as journeymen, and shall be governed by the same rules, working conditions and hours of labour.

Beginning with the third year, apprentices shall be enrolled in and complete the course of lessons in printing.

Offices shall confer with a committee on health and sanitation appointed to act for the union when occasion requires.

Ottawa, Ontario.—Ottawa Newspaper Publishers and Ottawa Typographical Union, Local No. 102.

Agreement to be in effect from October 1, 1926, until September 30, 1928, and thereafter (up to 30 days) until a new agreement has been negotiated.

Only union members are to be employed.

Wage per week—Assistant foremen, compositors, make-ups, operators, copy cutters, bankmen, typecasters, machinists and machine tenders, not less than $42 per week, day work, and $44.50 per week, night work, from October 1, 1926, until September 30, 1927; $43 per week, day work, and $45.50 per week, night work, from October 1, 1927, until September 30, 1928. Hours, 46½ per week, day work; 43½ hours, night work.

Overtime, time and one-half.

Work on Sundays and holidays, double time, men to be guaranteed at least two consecutive hours' work. This does not apply to morning newspapers after 7 p.m. or before 5 a.m. Day men on morning newspapers shall work on holidays five hours, and another hour if required to complete work, and shall receive a regular day's pay. Morning newspaper staffs working Saturday after completion of Friday night shift, time and a half for first four hours; double time thereafter.

Night shift in an evening newspaper office shall work under morning newspaper scale, and day shift in a morning newspaper office shall work under evening newspaper scale. Where three shifts are employed, two shall be considered night work.

No compulsion to work more than five hours without time for lunch.

No member shall act as operator-machinist in an office where over three machines are in operation unless regular operator fails to supply a substitute.

Only journeymen members or final year apprentices to be eligible as learners on machines in working hours. Term for learners, six months; compensation (except apprentices): first two weeks, $15 per week; next two weeks, $17; next eight weeks, $19; next six weeks, $22; remaining 8 weeks, $30. Journeymen members employed in the office may practise up to two hours per day on machines outside of regular working hours.

Members shall be paid weekly.

An employee may secure a substitute approved by the foreman when he desires.

An "extra" put to work within half an hour of starting time shall have a full day's pay. If starting after regular time and working less than 5 hours, overtime rates.

For call-back, half an hour or later after completing day's work, guarantee of three hours' overtime.

Foreman to be judge of competency.

Complaints against foreman as to discharge shall be referred to a local joint standing Committee of both parties to agreement.

Arrangements may be made between foremen and various chapels to have Saturday as a half holiday when possible.

Foremen are not to be fined by union for action taken under the agreement.

A joint apprentice committee shall be formed of two from each party. For four journeymen or less in a news room, one apprentice; one for each additional four or fraction thereof; not more than four on a shift. Beginning with the second year, each apprentice must attend at least one session per week at the Ottawa Technical School. Beginning with the third year apprentices shall enroll in and complete the union course in printing, paying 50 cents per week. Office boys may be employed, but not for regular printing work. They may be registered as apprentices if vacancies occur. Apprentices shall be under the supervision of the foreman. They shall be not less than sixteen years of age; shall be registered, and shall serve five years. Applicants shall be examined by the foreman and the joint apprentice committee. They shall undergo yearly examination.

Scale for apprentices, per week—First six months of 3rd year, $15; 2nd six months, $16; 4th year, $19 and $20; 5th year, $22 and $23. Night rate $1 above day rates.

There shall be a standing committee of two from each party to settle disputes as to scale of prices and interpretation or violations of agreement. Committee shall meet when any question of difference shall have been referred to it. If committee is unable to agree, the matter shall be referred to a board of arbitration of five members, decision to be final and binding. Local union laws not affecting wages, hours or working conditions, and laws of the International Union shall not be subject to arbitration.

Hamilton, Ont.—Hamilton Newspaper Publishers' Association and the Hamilton Typographical Union, No. 129.

Agreement to be in effect from April 1, 1925, until December 31, 1927, and up to thirty days thereafter, for negotiation of a new agreement.

If union can furnish competent help, only union members are to be employed. Otherwise, the employers may choose their employees. Non-union men, if employed, may be retained when competent, if they join the union.

There shall be a joint standing committee of two from each party to decide questions about scale of prices, interpretation or violations of the agreement. If committee cannot agree, matter shall be referred to a board of arbitration whose decision shall be final and binding. Whenever any difference arises, parties must at once appeal to the joint standing committee.

In event of general or sympathetic strikes being called, union will make effort that there shall be no interruption of publication of the local newspapers. The parties to the agreement will not enter any combinations to injure each other.

Minimum wages per week—Evening newspapers, journeymen members, from April 1, 1925, to November 30, 1925, $40; December, 1925, to December 31, 1926, $41; January 1, 1927, to December 31, 1927, $41.50.

Scale for morning papers, $3 per week over that for evening papers. Machinist-operators are to receive at least $2 over minimum scale for operators on the same shift.

Hours—evening newspapers, 8 per day; morning newspapers, 7½ per day. Members may work 1½ hours extra on Friday at regular rates. Saturday afternoon extra edition work to be at overtime rates. Evening papers may run a night shift between 3.30 p.m. and 3.30 a.m. of following day, at morning newspaper scale. Journeymen put to work after regular starting time shall receive at least 5 hours' work and a full day's pay. If an agreement is reached

and adopted by the Canadian Daily Newspapers' Association, regarding a shorter work week, the conditions shall apply to this agreement.

Overtime, time and one-half. Overtime must be given in rotation. Work on Sundays and holidays double time.

Employees laid off for reduction of staff to receive not less than 24 hours' notice except in mechanical breakdowns, failure of power, fire or flood.

Foremen shall have the right to employ help and to discharge for certain reasons.

The agreement provides various rules regarding sanitation.

There shall be not more than one apprentice to each five journeymen. Apprentices must be 16 years of age and have completed the public school course. A joint apprentice committee shall examine applicants. Apprentices shall be registered and serve five years. In third year, apprentices must enroll in union course of lessons in printing, and must complete the course. They shall be given one half day with pay every two weeks to attend a technical school printing course, and shall also attend six nights per month.

Wages, per week—first year, $8; second year, $11; third year, $15; fourth year, $19; fifth year, $23.

No overtime work for apprentices under 18 years.

Two machine (beginner) apprentices or learners, may be employed to every fifteen typesetting machines and these must be journeymen members (exclusive of apprentice member serving last six months). Term shall be 13 weeks at 75 per cent of journeyman's scale. Extension of time shall not exceed thirteen weeks.

Journeymen or apprentices in last six months may practise on machines when the product is not used.

Calgary, Alberta-Calgary Herald, Limited, and Printing Pressmen and Assistants' Union, No. 201.

Agreement to be in effect from May 27, 1926, until May 27, 1929.

Minimum wages per week, journeymen, May 27, 1926, to May 27, 1927, day, $43.20; night, $46.20; May 27, 1927, to May 27, 1928, day, $44.10; night, $47.10; May 27, 1928, to May 27, 1929, day, $45; night, $48.

Apprentices, 1st year, ¼ journeyman's scale; 2nd year ⅓; 3rd year, ½; fourth year, ⅔; fifth year, ¾.

Hours, on day shift, 45; on night shift, 42.

Construction: Buildings and Structures

Kingston, Ontario.—Certain Building Contractors and United Brotherhood of Painters, Decorators and Paperhangers of America, Local No. 114.

Agreement in effect from March 1, 1927. For provisions of this agreement, see article entitled "Strikes and Lockouts in Canada during March, 1927," page 369.

COLLECTIVE BARGAINING IN THE UNITED STATES OF AMERICA

THE February issue of *The International Review*, published by the International Labour Office, Geneva, contains a survey of the subject of collective bargaining in the United States by Lindley D. Clark, LL.M., of the United States Bureau of Labour Statistics.

The writer points out that the movement for collective agreements is a natural outcome of the substitution of mass for individual production, and as such presents a problem of particular interest in the United States. A collective agreement normally connotes a labour organization. There is a very considerable amount of legislation relating to such organizations, or at least recognizing their existence; such as laws declaring the legality of labour organizations, protecting them in the proprietary use of the union label, union card, badge or button, and giving them representation on boards for the arbitration of labour disputes. But none of these laws makes legal entities of such organizations, or bestows on them that status or capacity that is essential to the full exercise of power and responsibility in making contracts.

The writer states that a study of the subject of collective bargaining in the United States from a legal standpoint is confronted with at least two initial difficulties: one, the paucity of legislation on the matter; the other, the divergent and even conflicting attitudes of the courts of the various States. In the absence of a contract for a fixed term, the employer has absolute power to discharge and the employee to leave his work, and the specific performance of a contract for personal service cannot be enforced under existing law. Labour organizations are not legal entities, though some States have legislation providing for suits at law to which voluntary organizations can sue and be sued. The organizations themselves express a preference for determinations arrived at by the parties, an attitude which has restricted the volume and importance of court decisions and discouraged legislation on the subject.

On the other hand there has been a tendency in recent years towards practical recognition of collective agreements. The Anthracite Coal Commission appointed by President Roosevelt declared in 1903 that, if it were

within the scope of its jurisdiction, the demand for collective bargaining and a trade agreement might reasonably be granted. The National War Labour Board, functioning during the war, recognized the right of workmen to make such agreements through their chosen representatives, and took ground against the discharge of employees on account of their membership in labour organisations; while the report of the Director-General of Railroads, relating to the same period, stated that "the principle of collective bargaining was frankly recognized"; and quite a number of years earlier, a Federal court directed a receiver of a railroad to make an "appropriate contract" with an organization of railway employees on the subject of the employment conditions of its members. Again, in an order of June 14, 1919, the Postmaster-General declared that the employees of telephone companies should have the right to bargain, individually or collectively, through their chosen representatives. In March, 1924, the United States Railway Labour Board, in its decision No. 2305, ruled that "the Transportation Act, 1920, in substance and effect, guarantees to every railway employee the right to participate in the selection of his representatives in the conferences, negotiations, and general procedure under the law"; while the Congress of the United States, at the request of representatives of the railroad officials and their employees, has lately enacted into law a "Railway Labour Act" which is an agreed plan for the adjustment of differences as to wages and working conditions, such plan being the product of full and free conference between representatives of the two groups, and urgently advocated by both—a conspicuous example of an attempt on the part of employers and workmen to secure statutory recognition of an agreement fostered by them in joint conference. The National Association of Manufacturers, an active organisation of quite considerable influence, and often classed as conservative in this field, in a declaration adopted in 1919 said that "employees have the right to contract for their services in a collective capacity," but that employment contracts must be formed "without interference or dictation on the part of individuals or organisations not directly parties to such contracts"; nor may they stipulate "that employment should be denied to men not parties to the contract." In other words, dealings are to be with employees only, and no provision for the closed shop is acceptable. In 1925, this association declared that "collective agreements should be the voluntary act of both parties" which must be recognised as a valid statement, and renewed its statement in opposition to the closed shop.

No statistics of an inclusive nature as to the extent of actual adoption of collective agreements are in existence, although the State of Massachusetts has made local studies of considerable completeness. Reports of these were issued covering the years 1911 and 1916. In 1911 the more important unions in that State had trade agreements, 259 reporting agreements signed with all firms within their jurisdiction. In 1916, 1,354 unions with 239,580 members reported and of these 61 per cent, embracing 76 per cent of the membership, reported having agreements. Many of these were for fixed terms of years, while a large number were subject to termination on notice of from 30 to 90 days. Some reported as effective in 1916 had had initial formation as far back as 1886, 1889, etc.

In some industries, as coal mining and, within narrower geographical bounds, the building trades, textile industries, clothing trades, and the boot and shoe industry, the system of collective bargaining has been for several years either dominant or largely influential. The last-named industry was one of the earliest to take steps towards the adoption of this system, such efforts dating from the late 'sixties and early 'seventies of the last century. Important agreements covering a wide range of industries have been reproduced in the publications of the Bureau of Labour Statistics in the United States Department of Labour and its predecessors, from 1902 to the present, though not continuously and with no purpose of covering the field in detail. It is calculated that more than 4,000 agreements have come to the attention of the Bureau within the years 1924 and 1925, while it is believed that the number of informal but accepted agreements is even larger than that of formal signed agreements. Agreements are on file representing national organisations of bakers, barbers, brewery workers (including yeast, soft drinks, grain elevators, etc.), clothing trades, diamond workers, electrical workers, moving picture operators, painters, plumbers, pottery workers, printers, stove founders, window-glass blowers, and many others.

The United States Shipping Board has agreements with longshoremen's organisations at the principal ports, also with the seamen and officers on their vessels. The longshoremen of New York City also have an agreement with the lighter captains of that port and the sailors of the Great Lakes with the Lumber Carriers' Association operating there-

on. The employees of the railroads of the country are widely organised and their employment conditions are very generally determined by collective agreements. A publication of the American Federation of Labour, 1925, entitled "Wage Negotiations and Practices," gives an account of agreements of various ranges—national, regional, local under central supervision, and local—embracing many thousands of workers in some 70 odd categories.

Recent tendencies have made recourse to the courts more frequent and less undesirable, and there are indications that the enforcement of contracts not violating public policy will have the support of the courts. A growing sense of the responsibility of both parties to the contract, combined with respect for the rights of the consuming public, characterises recent judicial decisions, which are fully surveyed and analysed by Mr. Clark.

BUILDING PERMITS ISSUED IN CITIES IN CANADA DURING FEBRUARY, 1927

THE value of the building permits issued by 63 cities during February, as compiled by the Dominion Bureau of Statistics, was higher by $2,349,253 or 43.3 per cent than in the preceding month, and by $639,003 or 9.0 per cent than in February of last year; the total stood at $7,778,552 during the month under review, as compared with $5,429,299 in January, 1927, and $7,139,549 in the corresponding month of 1926. The February total was the highest for that month in the record for the 63 cities, which goes back to 1920. Building costs, however, were lower in 1927 than in any other year of the record.

Some 50 cities furnished detailed statistics, showing that they had granted over 750 permits for dwellings, valued at more than $3,300,000, and nearly 1,100 permits for other buildings, estimated to cost in excess of $4,000,000. In January, authority was given for

*The 35 cities for which records are available since 1900 are marked with asterisks.

the erection of some 500 dwellings and 950 other buildings, estimated at approximately $1,980,000 and $3,150,000, respectively.

Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan reported increases in the value of permits issued as compared with January, 1927, while in Alberta and British Columbia there were comparatively small declines. The largest gain, of $1,971,946 or 81.5 per cent, took place in Ontario.

As compared with February, 1926, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia registered improvement, that of $2,322,415 or 112.3 per cent in Ontario being especially noteworthy. Quebec reported the greatest decline, of $1,615,410, or 52.0 per cent.

Montreal recorded an increase in the value of the permits issued as compared with January, 1927, but a decrease as compared with February of last year. In Toronto and Vancouver, on the other hand, there was a falling off as compared with the preceding month, but a gain over the same month in 1926. In Winnipeg, the aggregate was higher than in either January, 1927, or February, 1926. Among the smaller cities there were increases in both comparisons in Halifax, Moncton, Shawinigan Falls, Brantford, Fort William, Galt, Guelph, Kingston, Kitchener, London, Niagara Falls, Oshawa, Ottawa, Stratford, St. Catharines, Sault Ste. Marie, York and East York Townships, Windsor, Ford, Sandwich, Walkerville, Moose Jaw, Calgary, New Westminster, Point Grey and North and South Vancouver.

Cumulative record for first two months, 1927.—The following table gives the value of the building authorized by 63 cities during February and in the first two months of each year since 1920. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1913 = 100).

Year	Value of permits issued		Average indexes of wholesale prices of building material in first two months
	In February	In first two months	
	$	$	
1927	7,778,552	13,207,831	147·3
1926	7,139,549	11,859,083	152·7
1925	5,902,118	11,349,388	153·5
1924	4,093,800	8,554,379	167·5
1923	5,679,671	9,819,169	164·3
1922	4,738,165	8,064,642	161·6
1921	3,683,359	6,278,923	209·7
1920	6,156,287	10,173,311	205·2

The aggregate for the first two months of this year was thus greater by $1,348,768, or 11.4 per cent, than in 1926, the previous high level of the record. The average index numbers of wholesale prices of building materials continued to be lower than in any other year since 1920.

BUILDING PERMITS ISSUED IN THE UNITED STATES IN 1925

IN a study made in 274 cities by the Bureau of Labour Statistics of the United States Department of Labour it is estimated that in 1925 64.7 cents out of every dollar expended for new building construction were spent for residential buildings, including hotels, as against 35.3 cents spent for new non-residential buildings. One-family dwellings made up 41.7 per cent of the total number of new buildings and 28.2 per cent of the total building costs. Two-family dwellings constituted 6.9 per cent of all buildings and 8.5 per cent of all costs. Apartment houses, each built to accommodate three or more families, were 3.0 per cent of all new buildings but made 20.6 per cent of all costs. One-family dwellings had an average cost each of $4,567, two-family dwellings $8,369, and apartment houses $46,928. The 342 hotels had an average cost of $502,333 each.

Private garages comprised 37.1 per cent of all new buildings erected, but only 2.3 per cent of the total cost of all buildings, the average cost being only $422. A total of 1,248 churches and 1,047 amusement buildings were built, but $63,457,806 were spent for churches and $116,283,961 were spent for theaters and other amusement buildings. Schools and libraries were built in these 274 cities to the number of 1,038, with a total cost of $163,027,827.

Based on the costs of material and labour, the bureau found that in 1925 building in general cost two and one-eighth times as much in 1925 as in 1914. Permit figures are available for 130 cities back to 1914. In these cities two and one-fourth times as much building was done in 1925 as in 1914. This means physical construction, not valuation. In the same interval population in these cities increased 24 per cent. It is believed that the building shortage of the War period has more than been made up with more new building being done than necessary to meet normal needs, this conclusion being based on the assumption that the building done in 1914 supplied the needs of that year.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. In five of these contracts (Group "A") the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

The remaining contract contained a schedule of rates and hours based on the current standards of the district in these respects. This schedule is given below.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and

the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contract containing the general Labour Conditions and Schedule of Wages and Hours

Repairs to wharf at Nootka, B.C. Name of contractors, McDonald Pile Driving Company Limited, Victoria, B.C. Date of contract, March 2, 1927. Amount of contract, unit prices—approximate expenditure, $4,952.31.

Trade or Class of Labour	Rates of wages not less than	Hours per day
	$ cts. per day	
Foreman	9 50	8
Pile driver engineer	8 50	8
Derrick engineer	8 50	8
Firemen	7 50	8
Boommen	7 50	8
Derrick men	7 50	8
Bridgemen	7 50	8
Pile driver men	7 50	8
Common labourers	3 60	8
(All 8 hours per day—48 hours week)		

Contracts in Group "A" (Construction)

Construction of Boat House, Torpedo Depot and Boat Slips, H.M.C. Naval Dockyard, Esquimalt, B.C. Names of contractors, Parfitt Brothers, Limited, Victoria, B.C. Date of contract, March 25, 1927. Amount of contract, $52,717.00. Following prices to apply for any change which may be made in this contract. Price for excavation—per cubic yard, $2.50; price for concrete, including forms per cubic yard, $15.

Construction of a new chain of buckets, with spares, for dredge, P.W.D., No. 2. Name of contractors, J. W. Cumming Manufacturing Company Limited, New Glasgow, N.S. Date of contract, March 23, 1927. Amount of contract, $6,596.

Reconstruction of wharf at St. Gédéon, P.Q. Names of contractors, Geo. E. Fournier and Naz. Létourneau, Montmagny, P.Q. Date of contract, March 26, 1927. Amount of contract, approximate expenditure, $10,988. Cribwork, $4.75 per cubic yard, concrete, $8.75 per cubic yard; stone backfilling, $1 per cubic yard; gravel surface, $1.25 per cubic yard; placing mooring posts, $9 each; ladders, $10 each; handrail 60c. per lineal foot.

Docking, repairing, etc., of steel Hopper Scow No. 107 (at Pictou Harbour, N.S.). Name of contractors, Halifax Shipyards, Limited, Halifax, N.S. Date of contract, February 2, 1927. Amount of contract, $3,110.

The equipment of cold storage and incubator rooms and the supply and installation of refrigerating apparatus in the Research Station Laboratory, Hull, P.Q. Name of contractor, Louis Gendron, Hull, P.Q. Date of contract, March 23, 1927. Amount of contract, $8,100.

Post Office Department

The following is a statement of payments made in March, 1927, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 577 64
Making and repairing rubber stamps, daters, etc.	647 38
Making up and supplying letter carriers' uniforms, etc.	3,120 93
Stamping pads, ink, etc.	242 02
Bag fittings	7,628 14
Cotton duck for mail bags	445 26
Scales	236 25
Letter carriers' satchels	1,633 58

The annual report of the Superintendent of Insurance of Canada, recently published, states that 44 accident companies transacted employers' liability and workmen's compensation insurance in 1925, including 11 Canadian, 24 British, and 9 foreign companies. The total premiums for this class of business were $2,320,074. The claims incurred amounted to the sum of $1,911,036, and at the close of the year there were unsettled claims amounting to $991,513.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods, for an average family of five in terms of the average retail prices in some sixty cities was $11.05 at the beginning of March, as compared with $11.23 for February; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $16.92 for June, 1920 (the peak); $15.98 for March, 1920; $12.66 for March, 1918; and $7.68 for March, 1914. Besides a substantial seasonal decline in the price of eggs, potatoes were also considerably lower, while less important declines occurred in the prices of bacon, lard and butter. Prices of beef, veal, mutton, salt pork, beans and evaporated apples were slightly higher. Including the cost of fuel and rent with that of foods the total budget was $21.29 at the beginning of March, as compared with $21.46 for February; $21.77 for March, 1926; $21 for March, 1925; $21 for March, 1924; $21.42 for March, 1923; $20.96 for March, 1922; $23.87 for March, 1921; $25.01 for March, 1920; $26.92 for July, 1920 (the peak). $20 for March, 1918; and $14.35 for March, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was again lower at 148.7 for March, as compared with 150.1 for February; 160.1 for March, 1926; 161.6 for March, 1925; 154.4 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; 256.7 for May, 1920 (the peak); and 194.3 for March, 1918. Thirty-eight prices quotations were lower, thirty-one advanced, and one hundred and sixty-seven were unchanged.

In the grouping according to chief component material five of the eight main groups declined, while the other three were practically unchanged. The groups which declined were: the Vegetables and their Products group, higher prices for wheat, western barley, foreign fruits and rubber being more than offset by declines in the prices of other grains, tea, straw and potatoes; the Animals and their Products group, due to lower levels for hogs, mess pork, eggs and tallow, which more than offset advances in the prices of cattle, sheep, beef and butter; the Fibres, Textiles and Textile Products group, due to declines in the prices of cotton fabrics and in silk, and in spite of higher prices for raw cotton and jute; the Non-Ferrous Metals group, due to lower prices for copper and silver, which more than counterbalanced increases in the prices of tin, lead and spelter; and the Non-Metallic Minerals and their Products group, due mainly to lower prices for coal, coal oil, gasoline and cement. The Iron and its Products group, the Wood, Wood Products and Paper group, and the Chemicals and Allied Products group were practically stationary.

In the grouping according to purpose consumers' goods declined substantially, mainly because of declines in the prices of potatoes, eggs, flour and tea. Producers' goods were unchanged, advances and declines counterbalancing each other. Materials for the textile and clothing industries, for the fur industry, for the metal working industries, as well as miscellaneous producers' materials, were lower, but these declines were offset by advances in the prices of materials for the meat packing industries and for the milling and other industries.

In the grouping according to origin raw or partly manufactured goods declined, increases in the prices of grains, rubber, cattle, sheep, beef, lead and zinc being more than offset by declines in the prices of potatoes, eggs, tea, silk, coal, silver and copper. Fully or chiefly manufactured goods also declined, due mainly to lower prices for flour, cotton fabrics, coal oil, gasoline and turpentine. Domestic farm products, articles of marine origin and articles of mineral origin were somewhat lower, while articles of forest origin were unchanged.

Professor Michell's index number of forty articles, with prices during 1900-1909 as 100, continued to decline, due mainly to seasonal decreases, being 164 for March, as compared with 167.7 for February; 179.5 for March, 1926; 264.0 for March, 1920; and 116.3 for March, 1914. The index of twenty food stuffs was down from 182.6 in February to 175.4 in March, due to lower prices for cheese, sugar, tea, flour and eggs. The index for twenty manufacturers' goods was practically unchanged at 152.6 for March, as compared with 152.7 for February.

A new index number of wholesale prices in Canada has been published by the Canadian Bank of Commerce, replacing the one first published in 1922 and continued monthly down to the end of 1926. The old index was unweighted and was based upon the average prices for the period 1908-1913. Its purpose was to indicate the relative movement of prices of commodities in the import and the export trade of Canada and included forty-eight commodities, twenty-four mainly imported and twenty-four mainly exported. The new index includes about eighty commodities and is based upon prices in 1923 and weighted mainly according to the physical volume of production of each commodity included, in the year 1923. The grouping is similar to that adopted in the Dominion Bureau of Statistics index in the classification according to chief component materials. The figures have been published monthly back to 1919 and are given for certain dates in the table in the next following article. The index number for the month of March, 1927, was 98.34, as compared with 96.42 for February; 98.34 for March, 1926; 105.5 for March, 1925; 94.89 for March, 1924; and 164.47 for March, 1920.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the Labour Gazette for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the Labour Gazette for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the Labour Gazette was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used

chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the Labour Gazette a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the Labour Gazette for January on Prices in Canada and in Other Countries, page 9. This table gives figures for June and December each year from 1914 to 1926, inclusive. Figures are now available also for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly figures 1918 to 1926, and monthly figures for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of

Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2, 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices showed a slightly higher tendency, sirloin steak being up from an average of 28.9 cents per pound in February to 29 cents in March; round steak from 23.5 cents per pound in February to 23.8 cents in March; rib roast from 21.6 cents per pound in February to 22 cents in March; and shoulder roast from 15.8 cents per pound in February to 16.1 cents in March. Veal and mutton also were slightly higher, the former being up from an average of 20 cents per pound to 20.2 cents, and the latter from 28 cents per pound to 29.2 cents. Increases occurred in most localities. Salt pork advanced from an average of 26 cents per pound in February to 26.9 cents in March, while bacon was down from 40.7 cents per pound to 39.8 cents. In fresh fish cod steak and halibut were somewhat lower, while whitefish advanced slightly. Lower prices for lard were reported from many localities and the price again averaged lower, being down from 22.8 cents per pound in February to 22.3 cents in March.

Eggs showed a substantial seasonal decline in practically all localities, the price of fresh averaging 50.9 cents per dozen in March, as compared with 58.4 cents in February and 66.5 cents in January, and cooking averaging 44.7 cents per dozen in March, 50.1 cents in February and 52.7 cents in January. The price of milk was unchanged in the average at 12.2 cents per quart. Lower prices, however, were reported from Hull, Ottawa, Peterborough, Prince Albert and Edmonton. Butter was slightly lower, dairy averaging 43.4 cents per pound in March, as compared with 43.6 cents in February, and creamery averaging 48.6 cents per pound in March and 49 cents in February. Declines occurred in many localities but these were partly offset by advances in others. Cheese was steady at 30.7 cents per pound.

Bread was unchanged at an average price of 7.6 cents per pound. Soda biscuits were slightly higher, averaging 18.6 cents per pound, as compared with 18.4 cents in February. Flour and rolled oats were steady, increases in some localities being offset by declines in others. Rice and tapioca showed little change. Canned vegetables showed a slightly lower tendency, tomatoes averaging 16.2 cents per 2½-pound tin, peas 16.9 cents per 2-pound tin, and corn 16.4 cents per 2-pound tin. Onions showed a seasonal advance from 5.1 cents per pound in February to 5.5 cents in March. Potatoes were substantially lower in the average, the price being down from $1.84 per ninety pounds in March, as compared with $2.01 in February. Lower prices were reported from practically all localities in Ontario and Quebec, while in the Maritime and Western provinces the changes were slight. Evaporated apples and prunes were slightly higher, the former averaging 20 cents per pound and the latter 15.1 cents. The price of sugar was unchanged, granulated averaging 8.4 cents per pound and yellow 8 cents per pound. Coffee and tea were steady. The prices of anthracite and bituminous coal were practically unchanged, the former at an average price of $16.85 per ton, and the latter at $10.32 per ton. Coke was steady at an average price of $13.40 per ton. No changes were reported in rent.

Wholesale Prices

The following is a summary of wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices fluctuated within narrow limits during March, the average for No. 1 Mani-

toba Northern cash wheat, Fort William and Port Arthur basis, was $1.42¾ per bushel, as compared with $1.39¾ in February. The high price for the month was $1.46 reached on the 5th, and the low $1.39½ on the 22nd. The movement in the prices of coarse grains was mixed, Western barley at Winnipeg being up

cord from price quoted. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In British Columbia coal oil is sold per month. m. For new tenants $30-$35 a20-$25. n. Houses with conveniences not extensively occupied by working men, livered from mines.

Continued from page 453

from 69½ cents per bushel to 71¼ cents, and Ontario peas from $1.40 per bushel to $1.45. The price, however, of Ontario barley at Toronto fell from 97½ cents per bushel to 97 cents; flax seed from $1.90½ per bushel to $1.89½; Western oats from 61½ cents per bushel to 60½ cents; and rye from 97½ cents per bushel to 97 cents. Raw sugar at Montreal declined from $4.52 per hundred to $4.33. Ceylon rubber advanced from 37 cents per pound to 41 cents. The price of potatoes was generally lower, due, it was said, to mild weather and to the marketing of supplies which had been stored. Quebec grades at

Montreal were down from $1.27½ per 80-pound bag to $1.10; and Ontario potatoes at Toronto from $1.52½ per 90-pound bag to $1.47. The price at St. John fell from $3-$3.25 to $2.50 per barrel. Turpentine fell from $1.33 per gallon to $1.27. Western cattle at Winnipeg advanced from $6.59¼ per hundred pounds to $7.12½, and choice steers at Toronto from $7.18¾ per hundred pounds to $7.59. Hogs at Toronto declined from $11.78 per hundred pounds to $11.21. Sheep were scarce and the price advanced from $6.50 per hundred pounds to $7.25. The price of beef reflected the trend prevailing in cattle, forequarters at Toronto advancing from $9 per hundred pounds to $9.75, and hindquarters from $13.50 per hundred pounds to $14.63. Creamery butter at Montreal rose from 42 cents per pound to 46 cents. At Toronto creamery prints advanced from 46 cents per pound to 47 cents, and solids from 44 cents per pound to 45 cents. Eggs showed a substantial seasonal decline, new laid at Montreal being down from 52-54 cents per dozen to 38-40 cents, and storage at Toronto from 43¼ cents per dozen to 37 cents. Whitefish was 2 cents per pound lower at 10 cents. Raw cotton at New York was slightly higher at 14.3 cents per pound in March, as compared with 14.1 cents in February. Several lines of cotton fabrics declined, denim being down from 48 cents per pound to 46 cents, ticking from 53.2 cents per pound to 49.4 cents, and saxony from 73.7 cents per pound to 58.5 cents. In non-ferrous metals copper declined from $14.87 per cwt. to $14.55, and silver from 56⅝ cents per ounce to 54¼ cents, while lead rose from $7.55 per cwt. to $7.70; zinc from $8.23 per cwt. to $8.28; tin from 69¼ cents per pound to 70 cents; and solder from 39 cents per pound to 41 cents. Coal oil at Toronto was down from 24 cents per gallon to 23 cents, and gasoline from 24½ cents per gallon to 23½ cents. Anthracite coal fell from $13.32 per ton to $13.02.

Dissolution of the Italian General Confederation of Labour

The Italian General Confederation of Labour has been dissolved by the Management Committee, this decision being unanimous save for a single vote. In an official communication issued by the Management Committee and published by the International Labour Office in its issue of *Industrial and Labour Information* for February 21st, an account is given of the events which led up to this decision.

On November 1, 1926, the headquarters of General Confederation of Labour at Milan were occupied and ransacked. On the same day the headquarters of the Italian Federation of Metal Workers at Turin and those of the International Secretariat of Tramway Employees at Rome, suffered the same fate. The following day the editorial department of the trade union journal *Battaglie Sindicali* was notified that, by decree of the Prefect of Milan, the publication of this paper was suspended.

On November 9, 1926, the headquarters of the General Confederation of Labour and the Federation of Metal Workers were restored to the Secretariat of the Confederation, but as a result of the damage done, the tramway workers' headquarters at Rome could no longer be used.

A week later the Secretariat of the Confederation made a communication to the press with a view to contradicting rumours of the dissolution of their organization but the same was not published in any paper. All non-Fascist papers have been suppressed, and all non-Fascist political parties dissolved. Thus, the situation of the Confederation, which no longer had its own organ and could no longer count on the daily press to publish the simplest communiques to its members, tended to become more and more precarious and it was practically impossible for it to undertake any useful action in the social sphere.

A request was made to the Prefect to raise his embargo on the appearance of the trade union journal but this was refused. Meanwhile the Secretariat of the Confederation was informed that two members of the Management Committee, the secretary of the Federation of Agricultural Workers, the secretary of the Federation of Wood Workers and the Federal Representative Liguria had been condemned to reside in certain specified localities.

In view of the existing situation the Management Committee adopted a resolution declaring its work at an end and instructed the Executive Committee to proceed to wind up the General Confederation of Labour.

The city council of Edmonton, Alberta, has adopted a group insurance plan for civic employees. The insurance is on a 60-40 basis, the former percentage being paid by the city and the latter by the individual. The amount of insurance is limited to $2,000 for the staff with a $4,000 maximum for superintendents or heads of departments. The insurance company is responsible for securing the business from the employees direct.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The downward trend of prices, in evidence since the middle of 1925 in industrial countries, except those that have not returned to the gold standard or stabilized their currency, was still noticeable in wholesale prices and in the cost of living. Rents have not shown the same decline as other elements of cost of living budgets, and manufactured articles have not declined to the same extent as raw materials.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) was 124.1 at the end of February, showing a rise of 0.8 per cent during the

month. Foodstuffs, which declined by 1.7 per cent in January, fell by 0.8 per cent in February, while materials remained unchanged in January and rose 1.7 per cent in February.

The Board of Trade index number, on the base 1913=100, was 142.6 in February, as compared with 143.6 in January. Foods declined 0.8 per cent, the principal change being a decline in meat and fish. Non-food articles declined on the whole by 0.7 per cent, with a considerable advance in cotton, and declines in iron and steel, other metals and minerals, and the miscellaneous group. On the base average for 1924=100, the index number for February was 85.8.

Cost of Living.—The index number of the Ministry of Labour, on the base July, 1914=100, was 171 at the beginning of March, being one point below the level of one month earlier. Foods declined 2 points to 162, fuel and light declined from 210 to 200-205; rent, clothing and sundries were unchanged at 151, 215 and 180 respectively.

published in two forms, the one given in a column of the accompanying table being on the base of prices in kronen, with the first half of 1914=1. This index in February, 1927, was 18,765, foods being 17,922, and industrial materials, 20,652. The other form in which the index number is published is as an index of gold prices or schillings, first half of 1914 = 100. The schilling was first used in March, 1925, and, having a par value of 14.07 cents, comprised 10,000 paper kronen, of the exchange value of that date. The krone had a parity of 20.26 cents. The gold index has been calculated by months back to January, 1922, for the two groups, food and industrial materials, and for the total. For February, 1927, the total index was 130, foods being 124 and materials 143.

Cost of Living.—The index number of cost of living in kronen which was published to begin in January, 1926, on the base July, 1914=1, is also published, but only as a total (not by groups), on the base of prices in gold (July, 1914 = 100). For February it was 105.

France

Wholesale Prices.—The index number of *Statistique Générale*, on the base July, 1914= 100, was 645 for February, showing a rise of

10 points for the month. Imports rose more than native products and attained the level 650 as against 643. Foods rose 11 points to 616, all groups contributing to the rise; industrial materials rose 9 points to 671, with a decline of one point in the miscellaneous group and slight advances in the others.

Cost of Living.—The official index number of cost of living, Paris, on the base 1914=100, was 545 for the last quarter of 1926, a rise of 6 points over that for the third quarter. Foods and heat and light rose considerably. Clothing declined, and rent and sundries showed no change.

Germany

Wholesale Prices.—The index number of the Official Statistical Office, on the base 1913=100, was 135.6 for February, a decline of 0.2 per cent, due to seasonal declines in cattle prices and foodstuffs of animal origin. These prices declined still more early in March. Foodstuffs of vegetable origin and fodder rose in February and were fairly stationary in March. The group "provisions" declined one per cent in February. Industrial materials and semi-manufactured goods rose 0.4 per cent, with declines in rubber, metals, hides and leather, iron and coal, and advances in textiles; artificial fertilizer, chemicals,

technical oils and fats, paper and paper products, and building materials advanced. Manufactured goods on the whole showed no change.

Cost of Living.—The official index number of cost of living was 145.4 for February, thus being 0.6 per cent above the figure for January, 144.6. This increase was due to an advance of 1.1 per cent in the foods group, which was not compensated by declines in the groups heat and light, clothing and sundries. The index for rents showed no change.

Poland

Wholesale Prices.—The index number of the Central Statistical Office given in the accompanying tables is now calculated both in zlotys and in gold. As shown in the table the index down to January, 1924, was of prices in the greatly inflated currency. From July, 1924 (1914 prices being taken as 100), prices used were on the basis of the zloty, a coin which was 19.30 cents at par, but which fell by February, 1927, to 58.75 per cent of par or 11.34 cents. The index number of gold

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of month up to of month. (h) Four chief cities. (i) January 1913–December 1920, 22 foods. (k) Cost of food budget. (l) Index prices on the base 100 hereafter. (p) Index discontinued. New Index number in 1926. (q) Figures for following month.

prices has been calculated back to February, 1926, when it was 97.2 as against 146.1 for zloty prices. In November, 1926, the gold index was 102.8 as against 178.6 in the zloty prices.

Cost of Living.—The above remarks also apply to the cost of living and foods indexes. The index of zloty prices is shown from January, 1924. The Statistical Office has published the cost of living index figures for prices in gold since August, 1925, when the cost of living was 133.1 as against 148.5 in zlotys. In November, 1926, the index number of cost of living, gold prices, was 112.3, and in zlotys 195.0. The food element was 140.4 in gold prices and 243.8 in zlotys for the same month.

New Zealand

Wholesale Prices.—The index number of the Census and Statistics Office was 1585 in January, on the base average annual aggregate expenditure, four chief centres, 1909-13=1000, showing a decline of 1.8 per cent from

end of 1920; beginning of month thereafter. (*e*) Beginning of month. (*f*) Base is average for six capital towns. (*g*) 15th number of prices in zlotys, 1914=100. (*m*) From Jan., 1925, end of previous month. (*n*) No figures published. (*o*) Gold (*r*) Monthly figures hereafter.

the December level. Foods declined 4.4 per cent, with marked declines in agricultural produce and milled agricultural products and a slight advance in other foods. There were slight declines in textile manufactures and metals and their products and non-metallic minerals and their products. Chemicals and manures and wood and wood products advanced slightly and animal products were almost unchanged.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics declined 0.3 per cent in February to 146.4, on the base 1913=100.

"In all groups of commodities included in the comparison, except clothing materials, house-furnishing goods, and miscellaneous commodities, there were decreases in the price level ranging from less than one-tenth of one per cent in the case of chemicals and drugs to 1½ per cent in the case of fuels and 1¾ per cent in the case of metals. Clothing materials and miscellaneous commodities averaged slightly higher than in January, while practically no change was shown in house-furnishing goods."

Dun's index number (showing the cost *per capita* of a year's supply of commodities) was $183.087 on April 1, being thus 0.1 per cent below the $183.269 of March 1. Four of the seven groups were lower for the month, namely, breadstuffs, "other food," metals, and miscellaneous. Metals declined 1.9 per cent; breadstuffs, 0.7, and "other food" 0.5 per cent. All foods together rose 0.3 per cent due to increases in meats and dairy and garden products. Clothing advanced 0.1 per cent.

Bradstreet's index number (showing the cost of 106 commodities) was $12.5309 on April 1, a decrease of 0.2 per cent from March 1, after an advance of 0.3 per cent from February 1. Nine groups contributed to the decline, all fractionally, and these were breadstuffs, live stock, provisions and groceries, textiles, metals, coal and coke, oils, naval stores, and building materials. Hides and leather and miscellaneous products advanced and fruits and chemicals were unchanged.

York has commenced to publish an index of prices, on the base average 1923-25=100. The level for March was 88.8, showing a slight decline from the previous month. Non-ferrous metals were higher. Of the twenty-three quotations used in the index, thirteen were lower and ten showed no change. There was a drop of one-third in the price of mid-continent petroleum. Domestic farm products were slightly lower, and rubber advanced.

Cost of Living.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 165.2 in February

as compared with 166.9 in January. The change during the month was the result of slight declines in rents, clothing and coal prices, and of a decline of 2 per cent in food prices.

The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, fell slightly in February, to 160.3, as against 161.2 for January. The foods index decreased about 1½ per cent, and there were little or no changes in the other elements of the budget.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Question of Lawfulness of Picketing Employers' Premises

THE last issue of the Labour Gazette contained the judgment rendered in the British Columbia Court of Appeal on January 4, by Chief Justice Macdonald, together with the dissenting judgment of Mr. Justice M. A. MacDonald, in the case of *Schuberg versus Local 118, International Alliance of Theatrical Stage Employees, et al.* This case involves the question of the lawfulness of picketing the premises of an employer under such circumstances that injury to the employer's business results. Another dissenting judgment was given on the same date by Mr. Justice Archer Martin. The text of this judgment is given below:—

Dissenting Judgment of Mr. Justice Martin

In this case the learned Judge has found that "there is practically no dispute about the facts" and that there was "no evidence of personal malice against the plaintiff," but that the defendants had "watched and beset" the plaintiff's place of business (which he took over on 15th July, 1925) so to force him to continue to employ a "crew," so-called, of seven stage hands who were formerly employed "for a long period" of years, 18 in fact, the reduction of which crew to five (made by him about five months later, on 28th December, 1925, to take effect on 11th January thereafter) caused a trade dispute between the parties hereto with the result that the Defendants, after all the stage hands had left the plaintiff's employ and he had engaged five outsiders to take their places on said 11th January, took certain steps beginning on the 18th of January, and lasting until 24th February, which the learned judge below describes thus:—

"The defendants thereupon placed men at the entrance to the theatre who distributed handbills addressed to 'The Theatre-Going Public of Greater Vancouver' stating *inter alia* in large type, that 'the Empress Theatre is unfair to organized labour.' Defendant also caused motor cars and sandwich men, displaying signs and banners bearing the same statement, to parade before the entrance to the theatre, they watched and beset the Plaintiff's place of business."

These are all the allegedly wrongful acts that are found against them, and they are no more than are admitted in the defence which justifies them as being done for the sole purpose of lawfully furthering defendants' interest in a trade dispute, but they undoubtedly had the result of diminishing the profits of plaintiff's business and so the learned judge awarded him $1,750 as damages therefor, though he claimed that his receipts had fallen off $700 per week for the five weeks of the said disturbance.

Since much stress was laid upon the handbill its full text should be given, viz.:—

It is illegal to boycott but this is to
Inform the
THEATRE-GOING PUBLIC
OF
GREATER VANCOUVER
THAT
THE EMPRESS THEATRE
IS UNFAIR
TO
ORGANIZED LABOR

Conditions enjoyed by the Stage Employees for eighteen years are now denied them by the present management. Local No. 118, I.A.T.S.E.

It is to be noted that the learned judge has not found, nor is there evidence to support a finding, that the plaintiff was boycotted or that there was violence or intimidation or that any disturbance involving a breach of the peace was created by defendants' actions, nor was there any breach of contract. The extent of the number of defendants' men at the entrance to the plaintiff's theatre is thus limited by the plaintiff himself:

"There was always during the boycott period one to three of our former stage employees or other stage employees, standing out on the curb during the whole time after the doors were open to the public."

In addition he relies on one particular incident, but that was explained satisfactorily and the learned judge below properly attached no importance to it, and on p. 32, plaintiff admits that (except that one incident) he had no complaints from patrons, "most of it was joking and making fun." In my opinion all that happened could not properly be said to constitute a nuisance at common law and at most it was a case of peaceful picketing.

The defendants largely rely upon the rights acquired under our "Act relating to Trades Unions," cap. 258, R.S.B.C., secs. 2 and 3, which it is submitted are essentially the same (but with additions) as those acquired by the effect of the provisions of the English Trades Disputes Act, 1906, cap. 47, amending the Conspiracy and Protection of Property Act, 1875, cap. 86. Section 2 of our Act extends not only to trades unions and their officers, members, agents or servants, but also to "any other person" and frees them

from liability "for communicating to any workman, artisan, labourer, employee, or person (i.e., to all the world) facts respecting employment or hiring by or with any employer or producer, etc., of the products of labour, or for persuading or endeavouring to persuade by fair or reasonable argument, without unlawful threats, intimidation or other unlawful acts, such workman, employee or person" not to renew expired contracts, or to refuse to become the employee or customer of any such employer or producer. This goes very far, but the next sec. 3 goes still further and relieves the same person from liability "for publishing information with regard to a strike or a lockout . . . or other labour grievance or trouble, or for warning workmen, artisans, labourers or employees or other persons against seeking employment in the locality affected" or "from purchasing, buying or consuming products produced or distributed by an employer being a party to the . . . . labour grievance or trouble during its continuance." The producing and the staging of plays and the sale or purchase of tickets of admission thereto are unquestionably within this section; and what was done by the defendants herein is equally, to my mind, within its three expressions viz., (a) "publishing information with regard to . . . . a labour grievance or trouble;" (b) "warning workmen . . employees or other persons not to seek employment in the locality affected;" and (c) warning the same "from purchasing, buying, or consuming products produced or distributed by said employer." The much relied on hand-bill is, in effect, a direct and unmistakable "warning" to the "theatre-going public" against "buying" the "product" that the plaintiff was offering to the public and it is the falling off in the sale of his tickets that he complains of. It must also in practice be the case that the publication of the "information" and "warning" will be primarily given "in the locality affected." Otherwise it would be largely ineffective and the specific rights conferred by the statute would be considerably frustrated if it were unwarrantably, as I think, construed to authorize only acts done outside of that locality; these authorized appeals to the members, friends and supporters of organized labour, or the uninformed public in general, must in reason be intended to be addressed to them where they will be most effective, i.e. on the very scene of the "labour grievance or trouble" itself—its locus or locality and its surrounding neighbourhood. Furthermore, there is no limitation set upon the means used to "publish" the "information" or "warning" (which may be set by hand-bills, signs, bill-boards, banners or other forms of advertisement) or the number of persons who may act in concert to that authorized end and in such case I am, with all respect, unable to see how the element of criminal conspiracy enters into the matter, and, as already noted, no intimidation, threats or other unlawful acts have been found. The general intention of the section might almost be summarized as one to authorize the resort to means which will induce the public at large to interest itself in the trade dispute and so bring pressure to bear upon one or both of the disputants; that it is intended to be remedial to and confer important rights upon "labour" is evident from the fact that the rights of "publishing" and "warning" and freedom from liability for their consequences, are bestowed upon "labour" alone and not upon the employer, and so the section must be construed in that significant light.

Such being my view of sec. 3, there is no necessity of giving here the full results of the elaborate study of sec. 2, that I have made, and therefore I shall content myself with observing, with all due respect to other opinions, first: that the expression "communicating facts" is a loose one and does not require the full statement of all relevant facts pro and con, nor with that exactness which is required in legal proceedings; such a requirement would be obviously beyond reasonable contemplation in the course of a trade dispute with its unavoidable creation of heated minds and acrimonious feelings; second: that a statement that an employer is "unfair to organized labour" is not necessarily "an opinion merely," as was found below, but if it is established by evidence it becomes a fact ab initio and one of paramount consequence; third, that this view is supported by the permission given to resort to persuasion by fair or reasonable argument, and once the door is opened to persuasion and argument it is an extremely difficult, if not manifestly impossible thing to say what constitutes a fair and reasonable limitation to set thereto; I do not think any two minds could be got to agree upon the application of an exact boundary to argument and persuasion upon the rights or wrongs of a labour dispute; and fourth, that I regard the statement that "conditions enjoyed by the stage employees for eighteen years are now denied them by the present management" as one of fact in substance, though indefinite in detail, which was established by evidence at the trial.

I have not overlooked the submission of defendants' counsel that it was proved at the trial that the theatre was "unfair to organized labour," and on this there is no finding by the learned judge below, he not passing upon

it as being "one of opinion merely," as already noted. I have, however, felt it to be my duty to consider carefully this allegation, with the result, after a close perusal and re-perusal of all the evidence in the case that I think it has been established; the reason given by the plaintiff for reducing his stage "crew" from 7 to 5 is not satisfactory to me in view of the evidence adduced by the defendants in support of their feeling of "unfairness," which is something more than the assertion of or reliance by either side upon strict legal rights. The testimony of several witnesses shows that the reduction of the staff threw additional burdens upon the reduced members of it, and that the retention of the full crew was a necessity for the proper production of the plays that were then being produced in a stock theatre of that description, and the fact that these conditions had been recognized for eighteen years as fair and just between master and servant and adopted by other theatres in Vancouver of a like class strengthens this view. Simply for an employer to reduce a very long existing staff so as to make more money by cutting down expenses in a business which he says was paying before the dispute, is not a sufficient reason to prevent the defendants from reasonably maintaining that such an act was "unfair" to them in its oppressive results, in the wide and true sense of the term as applied to the relations that ought to exist between employer and employed, even though strictly within the letter of the law. It is the recognition indeed of higher rights than mere strictly legal powers under labour contracts that caused the legislature of this Province to pass in 1918 the Minimum Wage for Women Act, cap. 56, cap. 173, of R.S.B.C., to prevent the oppression of working women by "sweating" and otherwise, sec. 5, thereof providing in part:

"It shall be the duty of the Board to ascertain the wages paid and the hours and conditions of labour and employment in the various occupations, trades, and industries in which females are employed in this Province, and to fix the minimum wage, the maximum hours, and such conditions of labour and employment as in the opinion of the Board seem necessary or expedient for the welfare of employees..."

And since then, the Male Minimum Wage Act of 1925, cap. 32, has been passed, and both of these statutes are aimed at remedying conditions in labour which while legal as a matter of contract between master and servant were yet felt to be so "unfair" in the wider interest of the public that they called for the intervention of Parliament; and that there are other conditions which would become unfair in a popular and yet true sense by the unjustifiable assertion of legal rights is beyond question. Such words, indeed, as "intimidate," "wrongful," "legitimate" and also, obviously I think, "unfair," are not words of art but "of common speech and every day use, and must receive therefore a reasonable and sensible construction according to the circumstances of the case as they arise from time to time," and "looking at the course of legislation and keeping in mind the changing temper of the times on this subject," as the Court of Crown Cases Reserved put it in Connor vs. Reston, 1891, 7, T.D.R. 651, and considering also the observations of Lord Dunedin in Sorrell vs. Smith (1925) A.C. 700, at 717, pointing out that a judge is not always "able to give a strict legal definition" of words to a jury, yet they may decide between two alternatives by "that inner standard of right and wrong which is not exactly conscience but which I think is best expressed by the French term for 'intérieur.'"

The conclusion I have reached after a lengthy consideration of the matter is that the defendants are justified in what they did by said sec. 3, apart from their additional invocation of sec. 2, and I prefer to base my opinion upon our statute, which is not the same in important respects as the English statutes and is more favourable to the defendants than they are; but even if they were identical the general and main effect of the many English cases which have been cited, and which I shall not attempt to review (because as Lord Dunedin says in Sorrell vs. Smith (1925) A.C. 700, at 717 "it would be an impossible task to reconcile either the decisions or the dicta") would be to sustain, in my opinion, the clear and able submission of the appellants' counsel. Out of respect to the learned judge, however, I shall refer to a recent decision of the House of Lords in said Sorrell vs. Smith and Rex vs. Blachsawl (1925) 21, Alb. 580; 3 W.W.R. 344; which are specially relied upon by him, and to Rex vs. Reners (1926) S.C. 499, which was pressed upon us by respondent's counsel. As to the Sorrell case wherein all relevant authorities are considered, Lord Cave, at p. 712 (Lord Atkinson concurring) after referring to "the famous trilogy of cases" there cited Mogul S.S. Co. vs. McGregor; Allen vs. Flood and Quinn vs. Leathem, deduces these two propositions:

1. A combination of two or more persons wilfully to injure a man in his trade is unlawful and, if it results in damage to him, is actionable.

2. If the real purpose of the combination is, not to injure another, but to forward or defend the trade of those who enter into it, then no wrong is committed and no action is committed and no action will lie, although damage to another ensues.

The distinction between the two classes of cases is sometimes expressed by saying that in cases of the former class there is not, while in cases of the latter class there is, just cause or excuse for the action taken.

Lord Buckmaster, at p. 748, says that "the onus is not on the defendant to justify but on the plaintiff to prove that the act was spiteful and malicious."

Since the case at bar comes within the second proposition on the facts before us, the decision of the House of Lords assists the defendants and not the plaintiff.

Then as to the Blachsawl and Reners cases, the first being a decision of the Appellate Court of Alberta and the latter of the Supreme Court of Canada* on sec. 501 of the Criminal Code, I am unable to apprehend what assistance is to be derived in this civil case from decisions on criminal offences in which very different considerations arise, and in which the accused did not have the benefit of any statute similar to our said Trade Unions Act (cap. 258) which is conceded to be intra vires of the powers of this province under the B.N.A. Act. At p. 356 of the Blachsawl case, Mr. Justice Beck points out the distinction between that case and Sorrell vs. Smith, noting thereon (1) "That it was a civil case" and (3) the existence of a "special statutory enactment" therein, which is exactly what we have here, and it supplies here, on the facts, that defence of "lawful authority," which the same learned judge contemplated on p. 355, and which the said section of the Code in its opening provisions is careful to preserve by only striking at acts done "wrongfully and without lawful authority," thereby recognizing the effect of provincial statutes dealing with the property and civil rights of master and servant.

The Reners case is based upon the existence of a common nuisance or an unlawful assembly both of which elements are absent from the case at bar, and one has only to read the facts set out in the judgment to see how greatly they differ from those herein, quite apart from the existence of our said special Act; the omission from our Criminal Code of anything corresponding to the English statute is noted on p. 505, but in this civil action we have a statute which goes further than the English one to justify the defendants; and at the same page the Supreme Court noted the concurrence of certain great judges—in England—"that it was necessary to establish, in one way or another, that the watching and besetting was done wrongfully and without legal authority."

And at p. 508 it is said:—

". . . . The present question . . . depends upon its own facts, except insofar as they affirm, what is evident by the statute itself, that if picketing be carried on in a manner to create a nuisance, or otherwise unlawfully, it constitutes an offence within the meaning of the statute.

The facts upon which these defendants were convicted are thus recapitulated at the close of the judgment, p. 508:—

"The numbers of men assembled, their distribution about the premises, including the company's property, their attendance there by day and by night, the fires, the shouting, their reception of the police, their threats and conduct when the police approached, afford cogent evidence, not only of a nuisance, but also of an unlawful assembly."

How such a case, so far removed in its facts from the restrained conduct of the defendants herein can assist the present plaintiff, I confess I am unable to apprehend.

The result is that in my opinion this appeal should be allowed, because the defendants have lawfully made use of the rights conferred upon them by our said statute in furtherance of their business interests, i.e., the sale of their commodity, so-called labour, as to which it is well observed by Sir James Stephen in his History of Criminal Law of England (1883) Vol. iii. p. 212, after considering, pro and con, some objections that had been raised in certain quarters against the rise and operation of trade unions:—

"However this may have been, two acts were passed in 1824 and 1825, which set the whole of the law on the subject on an entirely new basis."

They represented and were based upon the view that labour, like other commodities, was to be bought and sold, according to the ordinary rules of trade, every one was to be free, not only to buy and sell as he chose, but to consult with others as to the terms on which he would do so. This was the essence of the act 5, sec. 4, c. 95.

If the subject of labour trouble be approached in this historic light, it will be freed from much difficulty, especially if the wise injunction of the Court of Crown Cases Reserved hereinbefore cited be not overlooked.

Guarantee Company not Discharged from Liability by Informal Procedure of Municipality

An insurance company agreed to reimburse to the City of Halifax, to the extent of $10,000, any losses it might sustain through the

* Labour Gazette, June, 1926, page 618, etc.

theft of its money by a certain collector of taxes. Subsequently, losses from this cause were alleged by the city in excess of the amount for which the company had become surety. The company having denied liability under the circumstances attending the theft, the city took action for recovery in the Supreme Court of Nova Scotia, which gave judgment against the company for $10,000. The company appealed to the Supreme Court of Canada, which confirmed the judgment of the lower court, Chief Justice Anglin however dissenting. Judgment was delivered by Mr. Justice Newcombe. Justices Duff, Mignault and Rinfret concurred with Mr. Justice Newcombe.

It appeared that the collector had received cheques to the value of $11,701.54 from two large taxpayers. Only a part of this sum was credited to the two taxpayers or used by the collector for the purpose for which it was paid in. The balance he applied in payment of other taxes which had already been paid, and for which he had already issued receipted bills.

In other words, the collector deposited most of the money paid in by the two taxpayers referred to above in such a way that it was made to appear that other taxes than those of the two taxpayers had been paid by these cheques, the collector suppressing the evidence that their taxes had been paid. The appellant company admitted that these facts constituted proof of embezzlement and contended that no evidence existed as to the time when the offense took place; and further that, inasmuch as the cheques of the two taxpayers were actually delivered to the city treasurer, who deposited them to the credit of the city in the bank account, these cheques having reached their intended and proper destination, were not misappropriated. It was contended further that the city authorities had not performed their statutory duties by requiring the collector to make monthly returns and that the surety was thereby discharged. The majority judgment of the court however, was to the effect that an insurer who has guaranteed the honesty of an employee of a municipality, is not discharged from liability by acts or omissions of statutory duty by the municipality not conducing to the defalcations of the employee guaranteed.

(*Supreme Court of Canada—London Guarantee and Accident Company versus Halifax*)

Question of Legality of Private Employment Offices

The question of the constitutionality of the Employment Bureau Act of Manitoba (Statutes of 1918, chapter 25) was considered in the magistrate's court at Winnipeg in March in a case in which the defendant was charged with operating an employment bureau in contravention of the provisions of the act. Section 9 prohibits the operation of any employment agency for gain. The defendant through his counsel contended that the act was *ultra vires* of the provincial legislature, and that it was in restraint of trade. Magistrate Sir Hugh J. Macdonald held however that the subject of this legislation was within the powers of the province as defined by section 92 of the British North America Act, being one of the "matters of a merely local or private nature in the province" which are assigned to provincial jurisdiction. The defendant was fined $10 and costs. It was stated that an appeal would be entered against this decision.

Compensation for Loss of Eye in Quebec

The Superior Court at Montreal recently awarded $2,054.94 to a stone-cutter employed by the Quinlan Cut Stone Company for the loss of one of his eyes while at work. The employee was working at a stonecutting machine when suddenly one of the knives broke at the point and a flying splinter of steel lodged in his right eye causing total loss of sight.

In another industrial accident involving the loss of an eye an indemnity of $5,582.80 was granted by the Superior Court. The amount of the indemnity however was reduced on appeal by the employer to $3,000. The workman in this case was employed by the Montreal Light, Heat and Power Consolidated, and was at work on an excavation. In the previous shift dynamite had been used to blow out rocks, and the accident resulted from an explosion caused by a blow of the workman's pick. The company offered $2,315 in compensation, but the court of appeals held that that amount was not sufficient indemnity.

Hernia Compensable in Quebec

An employee of an electric plating company in Quebec sustained a rupture while lifting machinery in the course of his employment. He claimed compensation, including $3,000 for permanent reduction of his earning capacity, with $700, being half the amount of his wages covering the period of total permanent disability. The court found that the plaintiff had sustained a total temporary disability for a period of at least six months and was entitled to compensation on that count to the extent of $346. The evidence also proved that the permanent disability of the plaintiff would vary in degree from 30 or 40 per cent if he did not undergo an operation, to 20 per cent if an operation were performed. In these cir-

cumstances, the court, having regard to the indecision of the plaintiff with respect to an operation, decided that it could not declare the defendant liable for the whole of the permanent disability and accordingly fixed the amount of such incapacity at 25 per cent, entitling the plaintiff to compensation amounting to $3,000. Judgment was accordingly given for the sum of $3,346 with interest and costs.

Workmen's Remedies under Compensation Unaffected by Employer's Default

A number of points in connection with the New Brunswick Workmen's Compensation Act were raised in a recent case of a workman who was injured while employed as a general "help"; his employer carried on building operations on a small scale, but had not paid any assessment to the Workmen's Compensation Board. The employer in this case was himself employed with a telegraph company, but in addition to this occupation he was a builder of houses, having built about fifteen houses in as many years. From 1921 to 1925 inclusive he paid assessments to the Board, his industry being classified as "building construction," "building repairs" and "house repairs" in different payroll estimates during these years. In connection with the Board estimate for 1925 he made the following statement to the Board:—

"I am at present having a house built by contract. It is not at all certain that any material part of the work will be done by day work. The only man in my employ is a handy man doing odd jobs about and caring for the furnaces."

The "handy man" referred to in the statement, while doing work by the hour, fell from a staging, sustaining serious injuries, his fall, as he afterwards contended, being caused by the unsafe condition of the flooring of the staging. He applied first to the Workmen's Compensation Board for compensation, but was informed that the builder in this case was not an employer under Part 1 of the Act. He then brought an action claiming to recover at common law, and in the alternative under Part 2 of the Workmen's Compensation Act (which permits of actions being taken against an employer for personal injuries caused by defective plant, machinery, etc., in industries not coming under Part 1). The trial judge ruled that the case was one within the scope of Part 2 (not Part 1), and on that assumption framed certain questions addressed to the jury, all of which were answered by the jury in a sense favourable to the injured workman. Judgment was accordingly given in favour of the plaintiff for $1,046 with costs.

On appeal by the employer, the New Brunswick Supreme Court set aside the decision of the lower court and ordered a new trial. The appellant submitted that the workman's rights, if any, were against the Board under Part 1 of the Act and that these rights were in lieu of all claims and rights of action otherwise. The Board however had decided that the workman had no claim under Part 1, and the action had been taken therefore under the provisions of Part 2. Part 2, however, excludes "domestic servants" from its scope. In this case the workman lived in one of his employer's houses and did different odd jobs such as shovelling snow, attending furnaces, and as he himself said, he was "just a general servant doing small menial jobs." On this point the appeal court held that the question of the workman's occupation should have been determined by the trial judge and not left to the jury as a mixed question of law and fact.

As to the finality of the Board's decision, namely, that the employer's occupation was not within Part 1, the court pointed out that under certain conditions section 35 of the Act allowed appeals from decisions of the Board on points of law. The judgment concluded:—

"In this case the employer filed his statement for the year 1925. His occupation was that of a builder and constructor. He failed to file one when he decided to carry on the work by day's labour. If he failed to file I do not see why the employee under the act should suffer. A penalty is provided for neglect or refusal to file, and there is an additional penalty, the employer being compelled to pay the board the full amount of capitalized value as determined by the Board of Compensation payable with respect to any accident to a workman in his employ which happens during the period of such default.*

"I do not think it is material whether the employer is assessed or not, and his failure to file a statement should not deprive a workman of his right to compensation."

A new trial was ordered in this case.

—*(New Brunswick—Blackburn versus McIntosh).*

*Section 61 of the N.B. Workmen's Compensation Act, as re-enacted in 1924, reads as follows:—"Any employer who refuses or neglects to furnish any estimate or information as required by section 48, or refuses or neglects to pay any assessment or the provisional amount of any assessment or any instalment or part thereof, shall in addition to any penalty or other liability to which he may be subject, pay to the Board the full amount or capitalized value as determined by the Board, of the compensation payable with respect of any accident to a workman in his employ which happens during the period of such default and the payment of such amount may be enforced in the same manner as the payment of an assessment may be enforced."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] MAY, 1927 [NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of April continued better than at the same period in any year since 1920. A small decline however was shown as compared with the preceding month, this decline involving a somewhat larger number of workers than were reported as released at the same period last year, although smaller than usual for the period of the year. This statement is based on statistics tabulated by the Dominion Bureau of Statistics from returns received from 5,931 of the larger employers, each with a minimum of fifteen employees, in industries other than agriculture and fishing. The working forces of these firms aggregated 795,727 persons, compared with 797,289 in the preceding month. The employment index number (based upon the number of employees of the reporting firms in January, 1920, as 100) stood at 96.2 on April 1, compared with 96.3 on March 1, and with 91.4, 87.2, 89.3, 87.6, 80.8 and 84.1 on April 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed that the volume of business transacted during March, as indicated by the average placements daily of applicants for employment was nearly 5 per cent greater than in the preceding month, but over 10 per cent less than that recorded for March, 1926. All groups except logging showed gains over February, while the decline as compared with last year was attributed mainly to a reduction in placements in farm work. At the beginning of April the percentage of unemployment among members of local trade unions stood at 5.7, as compared with percentages of 6.5 at the beginning of March, 1927, and 7.3 at the beginning of April, 1926. The percentage for April is based on the returns received by the Department of Labour from 1,509 local trade unions with an aggregate membership of 156,664 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $10.80 at the beginning of April, as compared with $11.05 for March; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for June, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower at 148.5 for April, as compared with 148.9 for March; 160.6 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); 198.1 for April, 1919; and 195.0 for April, 1918.

The time loss due to industrial disputes in April, 1927, was greater than during March, 1927, and also greater than during April, 1926. Twelve disputes were in existence at some time during the month, involving 853 workpeople, and resulting in the loss of 10,082 working days. Corresponding figures for March, 1927, were: ten disputes, 520 employees, and 7,312 working days, and in April, 1926, 14 disputes, 924 employees and 8,773 working days.

Industrial Disputes Investigation Act, 1907

During March the Department received reports from two boards of conciliation and investigation, the first being the final report in connection with a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships Limited, and their checkers, coopers, etc. The second report was from the board appointed to deal with a dispute between the Canadian National Railways and the clerks, freight handlers, etc. Four new applications for the establishment of Boards were received during the month. A full account of the recent proceedings under the Act is given on page 491.

International Economic Conference at Geneva

The International Economic Conference under the auspices of the League of Nations was held at Geneva early in May. The program of the conference was given in the January issue of the LABOUR

GAZETTE, in connection with the report of the Preparatory Committee presented to the Council of the League. The agenda included general consideration of the world's economic position, and of international problems in the fields of commerce, industry and agriculture. While the whole program was of interest to labour, special consideration was given to labour problems in the detailed study of world industrial conditions and of better methods for the organization of production. All countries of the world were invited to send delegates to the conference and the invitation was accepted not only by state members of the League, but also by countries still remaining outside the League, including the United States, the Russian Soviet Republics, and Turkey. Canada was represented at the conference by Messrs. Albert Matthews, Joseph Daoust, Dr. Adam Shortt, W. A. Wilson and Dr. W. A. Riddell.

An account of the proceedings, in so far as they are of special interest to labour, will be given in the next issue.

Women's wages and hours in British Columbia

The Minimum Wage Board of British Columbia, at a meeting held at Vancouver in April, considered the question of revising the existing regulations governing the wages of women and girls employed in wholesale and retail stores in the province. Before any change is made the Board will hold a public inquiry at which representatives of the employers and employees may present their views. When the present minimum weekly rate of $12.75 was established in 1918 the Board had no power to limit the hours of work. This power however was conferred upon it by the legislature under an amendment to the Minimum Wage Act in 1922, and it is anticipated that the result of the forthcoming inquiry will be that a definite limit will be placed upon the working hours of female employees in stores.

Another of the Board's orders now being re-examined is that relating to the fruit and vegetable industry, the text of which was given in the issue of this GAZETTE for October, 1926. Conditions in this industry are exceptional owing to its seasonal nature, the irregular supply of fruit and vegetables creating difficulties in regard to steady employment. It is stated that the Board intends to send a representative to study conditions in California, where the system of wage regulation in this occupation is believed to be satisfactory. According to the Vancouver *Province*, "preliminary investigations show that in California the weekly wage for women fruit packers is $16, $2 higher than the legal wage here. On the other hand the California packers are forced to pay this minimum only to fifty per cent of their employees. In this way they are enabled to pay smaller wages to women who are not considered thoroughly efficient workers. Some such plan may be adopted here."

Minimum wages in fruit and vegetable industry

As stated in the preceding note the Minimum Wage Board of British Columbia is reported to be sending a representative to California to study the methods followed in connection with the fixing of minimum wages in the fruit and vegetable canning industry. The Department lately received the fifth report of the Industrial Welfare Commission of the State of California. The report states that fruit and vegetable canning is one of the basic industries of the state and the one in which the largest number of female workers is employed. Approximately 45,000 women and minors were employed in the industry during the peak of the 1925 season. This number was made up of adult women who are attracted from other industries, the regular fruit workers who "follow the fruit," housewives and others who are not regularly employed, and minors who are employed during the school vacation period only.

The basic minimum wage for experienced workers is 33⅓ cents an hour. Adult women and minors are deemed experienced when they have completed two weeks of work in an establishment. In weeks in which the piece-rates paid do not yield 33⅓ cents an hour to 50 per cent of the women working upon them during the hours or regular time worked, a percentage of increase sufficient to make them yield that amount is added to the total earnings of all women and minors.

In time rate canneries, which number 52 out of the total 178 active plants in the State, the commission's minimum time rate for experienced workers is 33⅓ cents an hour. Rate and a quarter, or 41⅔ cents, is the least that can be paid for overtime or work performed after the basic eight-hour day. For all work performed after twelve hours, double the basic rate, or 66⅔ cents an hour, must be paid. Time rate establishments are mostly small specialty or preserving plants.

Although the Industrial Welfare Commission establishes the basic piece rates for the cutting or preparation of the most important varieties of fruit and vegetables, the basic minimum piece rates are not, in themselves, sufficient protection to the women. The great variation in the conditions of production in the individual plants, the size and degree of

ripeness of the fruit, the quality of the work required, the efficiency of the plant in keeping the worker supplied with fruit—these and other factors necessitate a system which will insure the yielding power of the minimum piece rates in the individual plants.

The yielding power of the piece-rates is controlled through a co-operative arrangement with the canning industry, whereby the industry itself pays the expense of weekly payroll inspections (called audits). In 1919, regional auditors were chosen by the commission, under regulation of the State Civil Service, and were directed by and solely responsible to the Commission. These auditors made weekly inspections of payrolls of all canneries electing to operate on this piece rate method of payment. Funds from which auditors were paid were collected from these employers, deposited with the State Treasurer, and audited by the State Board of Control in the same manner as all other state funds. Since 1919 this arrangement has existed each year.

Progress of union label registration

The Trades and Labour Congress of Canada has published a pamphlet on Union Labels, Shop Cards and Union Buttons, being the report of the Union Label Committee to the 1926 convention. Trade unionists are urged to give preference to goods bearing union labels, which signify the existence of industrial peace and mutual understanding between employers and employees. The pamphlet gives a partial list of unions which furnish this guarantee of labour performed under approved labour conditions, as follows:

The cigar makers and tobacco workers (blue label).
The United Garment Workers' Union label (on shirts, collars, suits and overcoats).
The Journeymen Tailors' Union label (on suits and overcoats).
The Boot and Shoe Workers' Union.
The Bakery and Confectionery Workers' Union.
The Hatters' Union.
The Ladies' Garment Workers (Pro-Sanos label).
The Allied Printing Trades.
The Photo Engravers' Union.
The Book-binders' Union.
The Moulders' Union.

Union shop cards are displayed in establishments such as barber shops, retail stores, etc., and union buttons are carried by numerous groups of union members. The last issue of the Labour Gazette (page 378) contained the text of the Act passed at the recent session of the Parliament of Canada amending the Trade Mark and Design Act so as to permit of the registration of union labels. Such labels may be placed upon goods or otherwise displayed with the consent of the proprietor, the use of the label being subject to cancellation only after 12 months' notice, unless otherwise specified in the agreement. The enactment of this legislation meets the request made to the Dominion Government this year and on many previous occasions (Labour Gazette, April, 1926, page 341). It is the culmination of a series of attempts, beginning in 1895 to secure to unions the right to register the labels of their several trades.

Family budget of working-man at Montreal

The Montreal Council of Social Agencies recently appointed a committee to study the "cost of living" at Montreal (an account of the activities of this organization was given in the Labour Gazette, May, 1925). The committee's report is summarized in the April issue of *Social Welfare,* published by the Social Service Council of Canada. The report suggests that every community should estimate the extent to which conditions necessitating relief prevail in their own district. It was in order to ascertain the number of people below the minimum standard that the Montreal Council appointed the committee to investigate the cost of living at Montreal. "We believe these figures constitute a correct, fair, and conservative estimate, and we are prepared to stand by them," the report states; "If the business world will tell us how many families are living below this minimum standard we can estimate the inevitable increase in the amount needed to maintain our social agencies, for in the low income group must lie a great proportion of the clients of the hospitals, sanatoria and relief-giving agencies of years to come."

A "reasonable standard of living" for a family consisting of a man, wife, and three children aged 13, 11, and 9 years, is estimated at $91.81 a month, or $1,101.72 per annum. If, however, the family is to be a self-supporting one, provision should be made for expenditure on health, and for insurance and savings. On a wage of $91.81, in the event of death or disability of the owner, the family would have no provision for the future, and would fall into the class of pensioners of some charitable agency. Moreover, no provision is made in the budget for recreation and amusement, or for replenishing

household furniture, etc. The items included in the estimated budget are as follows:—

Housing.—Rental $18 per month, with water tax $1.08 per month (this is for a 4-roomed house or flat, with minimum requirements of air-space, sanitation, etc., including Montreal and outlying districts).

Food.—The minimum amount on which the family could be well nourished was estimated at $44 per month. This estimate was based on a list of articles in a typical menu, which was submitted to the dietitians of three hospitals at Montreal, and of one in another city.

Fuel, Light and Gas.—The sum of $7.55 monthly was allowed, to be divided according to the requirements and cooking facilities.

Clothing.—A complete yearly outfit was priced for each person, to comprise the lowest amount needed as determined by the climate, necessities of labour, education and neighbourhood standards. This list was priced at departmental stores, lowest prices were not always taken, as durability was taken into consideration. It was realized that this level was barely acceptable in a decent standard, and that below this a family must rely on gifts of clothing or purchase at rummage sales, neither of these methods being approved by the committee. The amount arrived at for the family was $15.20 a month.

Considerations favouring shorter working week

The decision of the Commonwealth Arbitration Court of Australia, establishing a standard working week of 44 hours for "normal industries" of an interstate character was noted in the last issue. A similar decision was delivered in 1926 by the Court of Arbitration of Western Australia, by Mr. Justice Dwyer, in establishing a 44-hour week for sawmill employees in the State. The judge pointed out that Australia has for many years held the lead in the limitation of working hours and in the regulation of other working conditions, but that other countries are now moving in the same direction, largely through the influence of the League of Nations International Labour Organization and its 8-hour day Draft Convention. The judgment discusses the effects of industrial fatigue on health and output, and considers the difficulties arising from competition with industries in other states or countries, as placing the industries with shorter working hours in a relatively unfavourable position. It is pointed out that "the trend of modern machinery, particularly in factory work, is to increase the monotony of employment, and with it, fatigue. The old-time tradesman is to a large extent disappearing. In the old days an artisan was an artist. He made a complete work, a finished design. Now, however, he no longer paints a picture—he draws a line. The effect of this monotony is to produce, to an extent hitherto unknown, a feeling of mental weariness. This reduces the worker's efficiency in productive power.

"It may perhaps be said," the judgment continues, "that if the hours of work are reduced to 44 per week, why not reduce them still further? This is an argument which can be used on both sides and produce an absurdity and may, therefore, be cast aside. There is, however, no doubt that in this question as in many others, there is a point of maximal efficiency. There is also no doubt that what that point is will only be known after a long series of experiments and investigations. But with the knowledge before us that there is a tendency, not only here in Australia but throughout the world, for a shorter working day, that the limit for each day is towards eight hours, that with the introduction of new machinery, output may be many times multiplied, and that it is only fair that the worker should share in the blessings produced by the introduction of such machinery, there seems little argument left why it is not safe to make the experiment, where circumstances permit, of a reduction of the hours of labour so as to make the day a clean eight-hour working day.

"This much, however, might be added, that so far as output is concerned, it seems economically unsound, in view of the experiments and deductions of the authorities on industrial psychology, to work the 44 hours in five days. The extra three-quarters of an hour each day is a period of lessened activity and exhaustion, whilst the four hours on Saturday morning are, except towards the end, hours of high production. It may be of course that there are occupations and industries when there are countervailing advantages which would go to equalize the lessened output. . . . Before the Saturday is dropped as a working day I would urge the greatest caution to be taken by experimental tests of output and efficiency. Moreover, it seems to me the real reform should be towards the clean eight-hour day."

The judgment concluded by ordering "that the 44-hour week should obtain in this industry, distributed as follows: namely, eight hours on each day, Monday to Friday, inclusive, and four hours on Saturday. In other words, a clean eight-hours day with a half-holiday on the Saturday, with the proviso that it shall be optional with the respondent in this case—

though such course I do not recommend—to work the 44 hours on the Monday to Friday, inclusive."

Working hours of women in United States

On March 31 Governor Alfred E. Smith signed a 48-hour bill which represents the result of 14 years of effort to reduce the legal working hours of women in New York industries. The new law, which becomes effective in January, 1928, embodies the recommendations of the Industrial Survey Commission. It permits 49½ hours a week if a half holiday is granted on one of the six working days, and allows 78 hours overtime during the year. The bill passed the senate with only one dissenting vote, while in the assembly the vote was 122 to 22.

In Arizona, a new 8-hour law enacted by the 1927 legislature was approved by the Governor on March 9. Under this law not only are the daily hours of women restricted to eight, but the working week is limited to six days. The old law permitted a 7-day week and therefore 56 hours of work per week. Women in manufacturing establishments, places of amusement, and railroad restaurants or eating houses on railroad property, none of whom was covered by the old law, are included in the new one. Girls working in telephone or telegraph offices or exchanges where less than three are employed, nurses, women working in the fields during the harvest season, or in the fields, packing sheds or factories where perishable produce is grown or handled, and women working six hours or less each day, may work seven days a week.

The Massachusetts legislature, on March 19, rejected by an overwhelming vote the amendment to the 48-hour law proposed by the textile interests whereby women in the cotton mills would have been allowed to work ten hours a day and 54 hours a week, with an annual weekly average of 48 hours.

Similar legislation is in progress also in other States. A bill is before the California legislature to extend the existing eight-hour day law so as to include clerks and certain other classes of employees. In Illinois a women's eight-hour day bill was favourably considered by a committee of the House. A Senate bill in Nevada would provide for an eight-hour day and 6-day week for women. A similar bill is pending in North Carolina.

On the other hand, the House of Representatives of New Hampshire rejected a bill providing a 48-hour week for women, while in Connecticut the lower house rejected bills providing shorter working hours for women in manufacturing, mechanical and mercantile establishments. In North Carolina a bill to reduce the working hours of women in factories to 35 a week was defeated, and in Minnesota a bill to establish a maximum working week of 54 hours also met with defeat.

"Dictator" for American coat and suit industry

Dr. Lindsay Rogers, associate professor of government in Columbia University, New York, was appointed during April by the National Wholesale Women's Wear Association as executive director of the Association, with full power to co-ordinate and stabilize the coat and suit industry. It is stated that his position in this industry will resemble that of Mr. Will H. Hays in the motion picture industry, and that of Judge Landis in organized baseball.

Leading coat and suit manufacturers have been considering for the last year and a half some method of obtaining co-operation among the manufacturers and establishing a better understanding among manufacturers, jobbers and retailers.

The coat and suit manufacturing business, which during the last forty years has developed in haphazard fashion, is one of the largest industries in New York City, with a total annual output worth more than $300,000,000.

Dr. Rogers became known to the industry through his membership in Governor Smith's Advisory Commission, appointed in 1924, to devise a method of settling labour troubles in the industry. The efforts of this commission were successful. Dr. Rogers' analysis of conditions at the time making a deep impression on many of the leading men in the industry.

In announcing the appointment, the president of the Association said: "The remarkably rapid growth of the coat and suit industry is largely responsible for the comparative chaos that exists at present. A bureau of research will be formed under Dr. Rogers' direction. It will delve deeply into such major subjects as marketing and distribution, transportation, fashion development, credit extension and the general amelioration of the relationship between manufacturers, retailers and consumers."

Accident prevention in British Columbia

The Workmen's Compensation Board of British Columbia, in coöperation with the provincial boiler and electrical energy inspectors, has been making for some time a sustained effort to reduce the number of

industrial accidents in the Province. Employers are supplied with accident statistics of their industry, based on the unusually full records kept by the Board during the past ten years and published in their annual reports. This information is found to be of material benefit to employers who take a real interest in the work of accident prevention. In its report for 1926 (reviewed on another page of this issue) the Board states that "more intensive and thorough 'follow-up' work has been done to ensure the elimination of dangers found on inspection to exist. Circular letters have been prepared and distributed to employers, showing that certain types of work may be done in a safer manner. Illustrations were given of a group of concrete cases in which serious maiming or death resulted. Whether due to the combined efforts of those engaged in safety work or not, the fact remains that fatal accidents have annually shown a gratifying decrease during each of the past three years." The Board finds it necessary to add however, that "that cannot be said of the less serious yet costly time-loss cases. The whole accident record of the Province is convincing evidence to safety workers that much still remains to be done."

Experience of Massachusetts Conciliation Board

The report of the Board of Conciliation and Arbitration of the State of Massachusetts for the year 1926 states the following general conclusions that have been reached after a survey of the work of the year:

"As a result of another year's experience the Board is more firmly convinced that industrial problems involving differences between employers and employees, such as hours, wages and working conditions, are recognized by both parties as of mutual concern. This generally results in a willingness on both sides to take up these matters for discussion and consideration and to coöperate in reaching a determination as to what is fair and reasonable. This method is always recommended by the Board. Where such a course is followed, opportunity is afforded for adjustment of differences by the parties themselves without cessation of work; and, if the parties are unable to reach an adjustment, for the Board through its good offices to assist them in doing so. The work of the Board along these lines has not only broadened, but has resulted in the advice and assistance of the Board being sought relative to the provisions and forms of agreements; and also in making arrangements between employers and employees whereby labour controversies can be adjusted without cessation of work. It has been demonstrated that under such arrangements opportunity has been afforded the employer to develop his business, resulting in advantage to all concerned."

Nova Scotia a pioneer in technical education

The brief prepared by the Government of Nova Scotia for submission to the Royal Commission on Maritime Claims (the "Duncan Commission"), referred as follows to the early work of the Province in the field of technical education:—

"Nova Scotia was the pioneer in Canada in establishing a system of secondary technical education. It took this forward step simultaneously with Massachusetts, which was the first of the United States to extend its educational work into this field. The Legislature of Nova Scotia passed a bill on April 25, 1907, called the 'Act Relating to Technical Education,' which provided for a technical college in the city of Halifax and local technical schools in all industrial centres in the province. These projects were immediately carried forward and have been continuously enlarged and strengthened in an attempt to meet the needs of industrial workers in preparation for their daily vocations. At the present time there are maintained technical schools in twenty-seven different towns and cities, and the student enrolment in all the technical classes of secondary grade last year was approximately 3,400 pupils. These schools are supported from provincial and municipal funds, but the major outlay is provided from provincial revenue. Constant appeals were made to the Dominion Government for financial assistance in carrying on this work, because it was clearly evident that technical instruction for all the people was quite as much a concern of industry and commerce as of mere education. A Royal Commission was appointed by the Dominion Government on June 1, 1910, and in its report recommended unequivocally that federal aid should be given to the provinces for technical education. It proposed an elaborate policy of coöperation between the Dominion Government and the provinces and recommended the provision of a grant of $3,000,000 annually for a period of ten years by the federal authorities. The war intervened and while it lasted postponed action. Shortly after the armistice, the Federal Parliament took this matter into serious consideration again, and

on July 7, 1919, after due deliberation, passed 'An Act for the Promotion of Technical Education in Canada'."

Growth of labour banks in United States

The Department of Economics and Social Institutions (Industrial Relations Section) of Princeton University estimates the resources of labour banks in the United States as amounting to about $126,800,000 on December 31, 1926, representing an increase of $4,726,758 over the total resources of these banks at the end of 1925. Thirty-six labour banks are now in operation throughout the United States. The banks opened during 1926 were the Labour National Bank of Jersey City and the Brotherhood National Bank of San Francisco. The latter bank, which was opened December 18, has already resources of two and a half million. The banks which have discontinued were the Amalgamated Bank of Philadelphia and the Brotherhood Savings and Trust Company of Pittsburgh. The Brotherhood of Locomotive Engineers Co-operative Trust Company of New York was sold to other interests. If the thirty-four continuing banks alone are considered, an increase is found in total resources of these institutions of $15,218,911, in deposits of $13,487,107, and in capital, surplus, and undivided profits of $471,980. While the most of this increase occurred in the first half of the year, the tendency since then has been one of gradual but pronounced growth.

The Honourable G. Howard Ferguson, premier of Ontario, announced during April that the provincial government intended to take steps towards the creation of an industrial research institution with an endowment of perhaps $2,000,000 for the purpose of solving scientific problems of production and processing for Canadian industries and for the development of natural resources.

The population of the Province of Quebec in 1925 is estimated at 2,753,990 persons, according to the municipal statistics for the civil year recently published by the provincial Bureau of Statistics. Of the total, 1,201,220 were in rural municipalities, and 1,552,770 in urban municipalities, or 12.8 per cent more in the towns and cities than in the country or again for every group of 100 persons there were 43.6 in the country and 56.4 in the cities and towns. The population of villages, whether incorporated or not is included with that of the rural municipalities.

According to reports in the press in Calgary, Alberta, provision has been made this year for the first time for pensions for city police and firefighters. For nine months of the year it is estimated that the city's share of this new service will be $4,284 for the police and $4,860 for the firemen's fund. Details of the pensions scheme are still subject to approval by the city council.

The Railway Association of Canada recently issued a circular recommending the members of the Association to agree on procedure to be followed in connection with the refund of fares paid on personal account by railway employees. It is recommended that the following rule be added to the pass regulations:

Application for refund of fares paid on personal account cannot be given favourable consideration except under extenuating circumstances such as serious illness or death in family of employee. Full particulars must be supplied to support the claim, together with regular receipt as evidence of fare paid; also information as to dates and train numbers on which such tickets were used. No refunds, however, will be considered where the total amount is less than five dollars. All refund claims must be submitted through the same regular channels as transportation is obtained. Claims should be declined if not in accordance with these regulations.

The Labour Women's Social and Economic Conference, at a convention held recently at Edmonton, Alberta, passed resolutions opposing any form of contributory pensions of workers in Canada; requesting the Dominion Government to promote legislation providing for unemployment insurance; recommending that the minimum wage for female employees after two years' service should be $18 a week; protesting against the use of bare concrete floors in stores and workrooms; the elimination of cadet training from the school system of the various provinces and the substitution therefor of complete physical training; modification of the school curriculum for the benefit of those children who develop better through hand-work than through the more abstract medium of books.

New regulations for the control of tuberculosis, issued by the Provincial Health Officer of Nova Scotia, were published in the Nova Scotia *Royal Gazette* of April 13. Among other provisions it is ordered that "No person suffering from 'open' tuberculosis shall knowingly engage personally in the handling of food stuffs, nor shall any employer knowingly employ anyone so suffering, in any business or occupation requiring the handling of food stuffs by such employee."

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of April was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Farm work in the Province of Nova Scotia was opening up and providing additional employment for some experienced farm hands. The fishing industry reported abundant catches. River driving, which was active, was the chief feature of the logging industry. With a substantial amount of building construction proceeding in Halifax quite a number of workers were engaged at that point; elsewhere this industry was quiet. The coal mining industry was very active and continued production at a high level. Trade and transportation were both commented upon as showing improvement.

As in Nova Scotia the fishing catches in the Province of New Brunswick were heavy. River driving was giving employment to quite a number of workers. Manufacturing in this Province was rather busy. Construction work was opening up and taking on some additional workers. With the closing down of the winter port activities at St. John, transportation at that centre showed a falling off. Trade was stated to be fair.

Improved demand for farm workers in the Province of Quebec was noticeable. River driving was creating numerous demands for workers at the different Quebec offices. Manufacturing was reported to be quite busy, with improvements in the printing and boot and shoe industries in Montreal noticeable. With building construction work gathering in momentum, there were large demands for tradesmen and general labour. Railway construction, also opening up, required the services of a number of labourers. Transportation was normal, while trade was improving.

Rather heavy demands for farm hands with shortages of experienced men at several points were reported from Ontario. With considerable programs of building construction in prospect at several points throughout this Province, this industry was gradually getting under way. Railroad construction and maintenance were absorbing a large volume of unskilled labour, but plenty of applicants were available to meet the requirements. With the manufacturing industry very active, the most hopeful sign as far as it is concerned was the fact that a number of unskilled workers were being taken on at different points. The metal mining industry in the northern portion of the province maintained normal activity. River driving, as in the eastern provinces, was the feature of the report on the logging industry. The usual shortage of certain classes of female domestic workers was noted.

Although the weather in Manitoba had been backward, the demand for farm hands in this Province was on the increase at the close of April, with some shortages of experienced workers reported from other centres than Winnipeg. Highway and railroad construction were opening up, but there was no shortage of workers. Building construction was about to begin operations, with a fair season's program. As usual, there was very little demand for miscellaneous labour but a large number of applicants for such work. A good demand for women domestics, with a fair number of applicants and some shortage of farm domestics, was reported.

A decided increase in the demand for farm workers near the end of the month, with sufficient applicants, was the outstanding point in the reports from Saskatchewan. Some construction had been started in this Province, but railways have not gone ahead to any extent. Calls for general labour were infrequent. The customary shortage of female domestic workers was reported.

Farm placements in Alberta were on the increase, with plenty of applicants, but the weather had been backward for farm work. Wtih reasonable prospects, a fair amount of construction work was under way and railroad construction had also opened up to some extent. From Calgary it was reported that practically all building tradesmen were employed. The coal mining industry in this Province was very quiet. At Edmonton there was a small demand for logging workers. A slight shortage of women domestic workers, particularly for farm vacancies, was reported. Conditions generally throughout Alberta were fair, although the weather had retarded work.

There was a fair volume of activity reported in the logging industry in British Columbia, but there was no sign of an immediate increase. Mining remained normal. Building mechanics, particularly in the larger centres, were fairly well employed. Road and railroad construction were increasing their staffs. The manufacturing industries, particularly lumbering, showed fair activity and reasonable hopes of an increase in this line were entertained. Conditions generally seem to be improving with a proportionate decrease in unemployment.

EMPLOYERS' REPORTS

There was a small decline in employment at the beginning of April; but although this involved a rather larger number of workers than that noted on April 1, 1926, it was considerably less extensive than the reductions registered on the same date in earlier years of the record, and the situation continued to be decidedly better than on April 1 in any other year since 1920. The Dominion Bureau of Statistics tabulated returns from 5,931 firms, whose staffs aggregated 795,727 persons, compared with 797,289 in the preceding month. The index number stood at 96.2, while on March 1 it was 96.3 and April 1, 1926, 1925, 1924, 1923, 1922 and 1921, it was 91.4, 87.2, 89.3, 87.6, 80.8 and 84.1, respectively.

The Maritime Provinces, Ontario and British Columbia reported heightened activity, while curtailment was noted in Quebec and the Prairie Provinces. In the Maritime

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending April 30, 1927, and corresponding previous records. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

Provinces, there was moderate increase in employment, which contrasted with the pronounced decline shown on April 1, 1926. Manufacturing, mining, and construction were much busier, but logging and transportation were seasonally slacker. In Quebec, manufacturing recorded improvement, especially the metal and textile industries; trade, transportation and communication also afforded more employment, while logging and railroad construction reported a decrease. In Ontario, there were further, though smaller gains, curtailment in logging and railway construction being offset by improvement in manufacturing, mining, communication, transportation, construction, services and trade. In the Prairie Provinces, there were decreases in logging, coal mining and construction, while manufacturing, steam railway operation and trade registered increases. In British Columbia, the greatest improvement was in lumber and fish preserving establishments and construction; logging firms, on the other hand, released some employees.

Employment increased in Montreal, Quebec, Toronto, Ottawa, Hamilton and Vancouver, while in Windsor and the Other Border Cities and Winnipeg there were declines. In Montreal, manufactures, transportation, construction and trade registered heightened activity. In Quebec, the most outstanding gain was in construction, while manufacturing was somewhat slacker. In Toronto, further and larger gains were reported, chiefly in manufacturing, construction, services and trade. In Ottawa, there was a general, but moderate advance in employment, mainly in manufactures. In Hamilton, manufacturing, notably in iron and steel works, reported increased employment. In Windsor and the Other Border Cities, there was a loss in employment, owing to a temporary cut in production in automobile plants. In Winnipeg, manufactures were slightly busier, but there was a falling off in construction. In Vancouver, the most pronounced improvement took place in construction, while manufacturing as a whole was rather slack.

Manufacturing recorded further increases, particularly in the lumber, pulp and paper, textile, non-ferrous metal and animal food groups, and also in iron and steel, which on the whole, showed considerable gains, despite the losses already mentioned in automobile works. Leather boot and shoe and tobacco factories, however, reported smaller payrolls. Mining, communication, transportation, construction, services and trade registered increased activity, but there were the usual seasonal losses in logging camps.

Trade Union Reports

Reports were tabulated from 1,509 local trade unions at the end of March, with 156,664 members, 5.7 per cent of whom were idle as compared with 6.5 per cent in February. The advance in the employment afforded over February was the first indicated since October of last year, from which date unemployment has been steadily increasing, the improvement during March being due to the opening up of spring activity in various trades and industries throughout the country. The level of employment was also higher than in March last year when 7.3 per cent of the members were out of work, all provinces except Quebec and British Columbia contributing to the gain.

A report in more detail of the conditions existing among local trade unions at the close of March will be found on another page of this issue.

Employment Office Reports

During the month of March, 1927, references to employment made by the offices of the Employment Service of Canada numbered 23,370, while the placements effected totalled 21,898. Of the latter, the placements in regular employment were 10,404 of men and 3,856 of women, a total of 14,260, and the placements in casual work were 7,638. Applications for work reported at the offices numbered 35,993, of which 25,133 were of men and 10,860 were of women workers. Employers notified the Service during the month of 15,329 vacancies for men and 9,328 for women, a total of 24,657. An increase was shown in the volume of business transacted when the above figures are compared with those of the preceding month, but a decline was registered when a comparison was made with the corresponding period of last year, the records for February, 1927, showing 20,188 vacancies offered, 29,678 applications made, and 18,633 placements effected, while in March, 1926, there were recorded 27,802 vacancies, 37,664 applications for work, and 24,521 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1927, and also for the quarterly period, January to March, may be found elsewhere in this issue.

Production in Certain Industries

Some figures indicating the recent movements of trade and industry are given in the table on page 487. The Dominion Bureau of Statistics reported that production of pig iron in Canada at 75,637 long tons in March showed

a gain of almost 50 per cent over the 50,695 tons of February and with the exception of an output of 77,290 tons in March, 1924, was the greatest tonnage reported for this month since 1920. For the three months ending March the total pig iron production amounted to 178,049 tons, or an average of about 60,000 tons per month. During the month one additional furnace was blown in at Sault Ste Marie, Ontario, resulting in 6 furnaces being in blast on March 31. The active furnaces had a daily capacity of 2,375 long tons per day or about 47 per cent of the total capacity of all blast furnaces in Canada. Active furnaces were located: 2 at Sydney, N.S., 2 at Hamilton, Ont., and 2 at Sault Ste Marie, Ont. Production of ferro-alloys at 3,331 tons in March showed a decline of 7 per cent from the 3,601 tons produced in the previous month and consisted mostly of the grade having a high manganese content: small quantities of ferrosilicon were also produced. Production of steel ingots and castings followed the pig iron trend by advancing to 107,381 tons in March, a gain of 93 per cent over the output of 55,620 tons in February, and 83 per cent above the 58,765 tons reported for March a year ago.

Coal Production.—Full statistics of coal production during March are not yet available. The output of coal from Canadian mines during February was 13 per cent less than the production for the preceding month, and 8 per cent greater than the average for February in the past five years. The figures were 1,375,920 tons in February as against 1,569,489 tons in January, and an average of 1,277,714 tons during the five preceding years. The number of men employed in the coal mines of Canada, working underground and on surface, respectively, during February, 1927, were, by provinces, as follows: Nova Scotia, 11,121 underground and 2,321 surface, as compared with 11,036 underground and 2,296 surface for January, 1927; Alberta, 7,680 underground and 2,499 surface, as compared with 8,192 and 2,559 for January; British Columbia, 3,639 underground and 1,546 surface as compared with 3,481 and 1,646 in January; Saskatchewan, 456 underground and 115 surface, as compared with 484 and 121 in January; New Brunswick, 449 underground and 118 surface as compared with 421 and 131 in the previous month, making a total during February of 29,994, of whom 23,345 worked underground and 6,599 on surface, in comparison with 30,367 in the previous month, of whom 23,614 worked underground and 6,753 on surface. Production per man was 45.9 tons in February, as against 51.4 tons per man in January. During February the production per man per day was 2.4 tons as against 2.5 in January. The tonnage lost was largely due to "lack of orders."

Building Permits and Contracts Awarded

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of March, 1927, amounted to $11,641,427, as compared with $7,778,552 in February, 1927, and with $10,634,491 in March, 1926.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in April, 1927, at $38,582,300, the total for the first four months of this year now being $92,336,700, or 10.9 per cent ahead of the corresponding figure for 1926. Of this amount $16,287,300, or 42.2 per cent was included in the business building classification; $12,876,000, or 33.4 per cent came under the heading of residential work; contracts for public works and utilities were awarded to the value of $6,307,500 or 16.3 per cent, and industrial construction amounted to $3,111,500, or 8.1 per cent.

The apportionment of contracts awarded by provinces during April, 1927, was: Ontario, $17,836,200; Quebec, $12,370,200; Prairie Provinces, $4,581,600; British Columbia, $2,684,200, and the Maritime Provinces, $1,110,100.

The "contemplated new construction" in Canada during April, 1927, according to the same *Review,* totalled $81,093,700, $14,461,200 of this amount being for residential building; $20,065,300 for business building; $7,723,500 for industrial building, and $38,843,700 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

External Trade

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in March, 1927, the merchandise entered for consumption amounted to $110,581,152, as compared with $74,706,654 in February, and with $100,854,640 in March, 1926. The domestic merchandise exported amounted to $105,605,107 in March, 1927, as compared with $78,533,607 in February, 1927, and $112,263,910 in March, 1926.

The chief imports in March, 1927, were: iron and its products, $28,573,279, and fibres, textiles and textile products, $20,089,512.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $34,507,622, and wood, wood products and paper, $27,541,932.

In the twelve months ending March, 1927, exports of agricultural and vegetable products, mainly foods, were valued at $506,452,333, and wood, wood products and paper at $284,534,568.

Strikes and Lockouts

The time loss due to industrial disputes in April, 1927, was greater than during March, 1927, and also greater than during April, 1926. There were in existence during the month twelve disputes, involving 853 workpeople, and resulting in a time loss of 10,082 working days as compared with ten disputes in March, involving 520 workpeople, and resulting in a time loss of 7,312 working days. In April, 1926, there were on record fourteen strikes and lockouts, involving 924 workpeople, and resulting in a time loss of 8,773 working days. Two of the strikes and lockouts commencing prior to April terminated during the month and five of the strikes and lockouts recorded as commencing during April also terminated during the month. At the end of April, therefore, there were on record five strikes and lockouts, affecting 202 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were again somewhat lower, due mainly to a seasonal decline in the price of eggs. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $10.80 at the beginning of April, as compared with $11.05 for March; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for June, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. Besides a substantial seasonal decline in the price of eggs less important declines occurred in the prices of potatoes, flour, milk, lard, bacon, evaporated apples and prunes. Slight advances occurred in the prices of beef, mutton, butter and cheese. Including the cost of fuel and rent with that of foods the total budget averaged $21.02 at the beginning of April, as compared with $21.29 for March; $21.64 for April, 1926; $20.82 for April, 1925; $20.58 for April, 1924; $21.21 for April, 1923; $20.66 for April, 1922; $23.31 for April, 1921; $25.34 for April, 1920; $26.92 for July, 1920 (the peak); $20 for April, 1918; and $14.32 for April, 1914. Fuel was somewhat lower due to lower prices for coal and wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 148.5 for April, as compared with 148.9 for March; 160.6 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); 198.1 for April, 1919; and 195.0 for April, 1918. In the classification according to chief component materials four of the eight main groups declined, two advanced and two were practically unchanged. The groups which declined were: the Animals and their Products group, due to lower prices for eggs and butter; the Iron and its Products group, because of lower prices for steel billets; the Non-Metallic Minerals and their Products group, due to a decline in the prices of anthracite coal; and the Wood, Wood Products and Paper group. The Vegetables and their Products group and the Fibres, Textiles and Textile Products group advanced, the former mainly because of higher prices for grains, flour, bread and potatoes, and the latter due to higher prices for raw cotton. The Non-Ferrous Metals and their Products group, and the Chemicals and Allied Products group were practically unchanged.

The United States Senate at the recent session agreed to an amendment adopted by the House of Representatives increasing from $15 to $27 the maximum weekly limit of compensation payable to an injured employee of the United States under the Workmen's Compensation Act of 1916. The increase amounts to 75 per cent. The House Judiciary Committee pointed out, in favourably reporting the bill, stated that the increase in the cost of living since the law was enacted had worked hardship on the injured employee, who "suffers not only from the results of his injury, but from the necessity, to which it is often impossible for him to adjust himself, of attempting to maintain himself and his family" on the original maximum allowance. The substantial increase in the weekly maximum now provided by Congress is "reasonable," the committee declared, "when consideration is given to the advances in cost of living and wages since the standards of the present act were established."

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF APRIL, 1927

DURING the month of April the Department received the reports of two Boards of Conciliation and Investigation: (1) the final report of the Board established to deal with a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees, being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; and (2) the reports of the Board constituted to inquire into a dispute between the Canadian National Railways and certain of its employees, being clerks, freight handlers, warehousemen, passenger station employees, stores employees, stationary engineers, stationary firemen, classified and unclassified labourers in and around shops and roundhouses, etc., as represented by the Canadian Brotherhood of Railroad Employees.

Applications Received

During April four applications for the establishment of Boards of Conciliation and Investigation were received as follows:—

(1) From certain miners in the employ of the Inverness Railway and Coal Company. This application supersedes the application which was reported as having been received last month from the same employees and which was defective at certain points. This second application, which was supported by the Mayor and Board of Trade of the Town of Inverness, who considered the situation to be quite serious, protested against an alleged lockout of employees by the employing company and a reduction in wages. The number of employees directly affected by the dispute was given as 270. The Minister of Labour established a Board and appointed Messrs. R. S. McLellan, of Sydney, N.S., and Angus L. Macdonald, of Halifax, N.S., Board members on the recommendation of the employer and employees, respectively. The Board had not been completed at the close of the month.

(2) From certain employees of the Brompton Pulp and Paper Company, Limited, being members of Local 98, International Brotherhood of Pulp, Sulphite and Paper Mill Workers. The company consented to refer to a Board the applicants' claim that certain employees had been dismissed by the Brompton Pulp and Paper Company, Limited, because of their membership in a labour union. A Board was established, the personnel being as follows:—Mr. W. A. Dowler, K.C., Fort William, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Messrs. Emile Rioux, K.C., of Sherbrooke, P.Q., and J. T. Foster, of Montreal, P.Q., employer's and employees' nominees, respectively.

(3) From certain employees of the Canadian Pacific Railway Company (Eastern Lines) in the stores department, being clerks, storemen, material handlers, helpers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(4) From certain employees of the Canadian Pacific Railway Company (Eastern Lines) being clerks employed in the mechanical departments, car and locomotive foremen's offices, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

The two latter applications were received at the close of the month.

Other Proceedings under the Act

In the case of a dispute between the British Columbia Telephone Company and certain of its employees, being members of Locals 230 and 310, International Brotherhood of Electrical Workers, a Board was established, composed as follows: Mr. F. J. Gillespie, Vancouver, B.C., chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Mr. James A. Campbell, Vancouver, B.C., appointed by the Minister in the absence of a recommendation from the employing company, and Mr. Robert H. Neelands, M.L.A., Vancouver, B.C., employees' nominee.

Report of Board in Dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and their Checkers and Coopers.

The final report was received about the end of the month from the Board which dealt with a dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Prior to this, two interim reports had been received from the Board. The first interim report, received on November 17, 1926, was accompanied by a letter written on behalf of the employers concerned, stating that the shipping interests undertook to meet their employees in or about the month of March, 1927, to discuss terms of employment for the ensuing year, to which arrangement, the report stated, the employees were agreeable. A second interim report, dated January 17, 1927, stated that the Board stood adjourned pending the outcome of the negotiations between the parties.

The disputing parties being unable to reach a satisfactory agreement, the Board reconvened on April 18, and, on May 4, submitted its final report, the Board members being unanimous in recommending an increase of 3 cents an hour to the employees concerned.

Report of Board

MONTREAL, Que., May 3, 1927.

The Honourable PETER HEENAN,
Minister of Labour,
Ottawa, Ont.

IN THE MATTER *of Industrial Disputes Investigation Act, 1907, and in the matter of differences between the Shipping Federation of Canada and the Canadian Pacific Steamships Limited, and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

SIR,—The Board of Conciliation and Investigation appointed by you on 19th October, 1926, to inquire into the matter above set forth, which is composed of Mr. Farquhar Robertson, Chairman, Mr. John T. Foster, representing employees, and Sir William Stavert, representing employers, has the honour to report as follows:—

The Board submitted an interim report on 15th November, 1926, at which time it recommended that the Board should stand adjourned pending the outcome of an attempt by the employees to negotiate with the shipping interests in St. John, N.B., on the subject of their grievances and demands in respect of that port and also the outcome of the undertaking of the Montreal employers to meet the employees after the close of the St. John season, in compliance with the solicitations of the men and also in accordance with the request of the Board.

Subsequent to the adjournment of the Board in November last a Board of Conciliation and Investigation was appointed under the Act at the request of employees who are the same, in part, as the Montreal men, to deal with differences existing between the employers, who are also the same, in part, in respect of the port of St. John. This latter Board having failed in their efforts to bring about a settlement of differences between employers and employees, unanimously agreed upon a finding which is, in effect, favourable to the employees, under date of 12th March, 1927.

On 16th April last, the representatives of the employees informed the Board, which now has the honour of reporting, that they had requested the employers to implement their undertaking of last winter to meet the employees for the purpose of discussing grievances and demands, and that the reply of their employers was unsatisfactory. For that reason the representatives of the employees, as well as the Department of Labour requested that the Board do resume their activities, which the Board proceeded to do.

On 18th April, the Board met, heard and considered the representatives of the employees concerning the situation as it then existed. It was then proposed that the employees should prepare information concerning the earnings of employees during the late season, for consideration of the Board, Sir William Stavert undertaking, so far as he was able, to obtain information of a similar nature from the employers.

On 25th April the Board again met to consider the suggested information at which time, after considerable discussion, it was suggested that the chairman should telephone Colonel Gear, as representing the employers, and make the request that they should meet the representatives of the employees in the room occupied by the Board as a Board room in accordance with the undertaking of the employers of November last. This Colonel Gear, on behalf of the employing steamship lines, agreed to do, and a date was accordingly set for such meeting.

On 27th April the Board met and afforded the representatives of the employers and employees the opportunity for the arranged meeting. After considerable discussion during which the representatives of the employees verbally touched on features of their demands as set forth in a formal presentation in writing during the earlier meetings of the Board, a copy of which accompanied the interim report of the Board, and the representatives of the employers replied. Colonel Gear assuming to speak for the employers, reiterated the attitude of the employers to the effect that they were not aware of any grievance on the part of the men, that each employer had always stood ready to hear any grievance from any of their immediate employees, and had received none, and that they did not recognize the right or authority of the men now assuming to act for the employees collectively, to so act. He left the impression that he did not wish to take direct issue with the representatives of the men on that point, or express disbelief in their good faith, but was not convinced, on the contrary was of the opinion the some misunderstanding existed, and that on investigation would reveal that, at least, men employed by his firm were incorrectly included among those whom the representatives of the employees assumed to represent; Colonel Gear then produced a formal reply to the presentation of the employees, which he read, and having filed it with the Board, it is now attached to this report as exhibit "C". Mr. Wainwright, representing the Canadian Pacific Steamships, also appeared, and supported Colonel Gear. The representatives of the employees, on hearing Colonel Gear's reply read, asked for a copy and permission to make a reply in rebuttal, which request was complied with.

On 2nd May the Board again met, and received the rebuttal of the employees, a copy of which is attached to this report as exhibit "D," after which the Board undertook to consider the whole situation with the object of arriving at a conclusion. After some discussion it was unanimously agreed that a compromise as between the employers and employees was hopeless and impossible. It was also unanimously agreed that with respect of rates of pay it was in the best interests of all concerned that the demands of the employees for an advance in pay to checkers and coopers should be complied with to the extent of three (3) cents per hour, viz:—that the checkers and coopers should receive 50 cents per hour for day work, and 60 cents per hour for night work, instead of the present rates of 47 cents and 57 cents respectively, with corresponding increases to men paid by the day, week, month or year, increases to date from April 30 last. With respect however to that feature of the demand of the employees which has regard to contract and working conditions, the Board feels that in view of the tenor and attitude of the employers it would neither be useful nor constructive to make any finding, the Board, therefore, unanimously recommends accordingly.

All of which is respectfully submitted.

(Sgd.) FARQUHAR ROBERTSON,
Chairman,

(Sgd.) W. E. STAVERT,
Representing Employers.

(Sgd.) J. T. FOSTER,
Representing Employees.

Dated at Montreal, this third day of May, in the year of Our Lord, One Thousand Nine Hundred and Twenty-seven.

EXHIBIT "C"

Statement by Col. W. I. Gear, on behalf of the Shipping Companies

APRIL 27, 1927.

The demand of the men appears to me to be in effect a demand for a minimum wage for the benefit of inexperienced and irresponsible men, and no less, a demand for a recognition of the right of juniors (some of them on the general staffs of employers) to demand working conditions. I say for the benefit of inexperienced men and juniors, because the experienced and responsible men already receive on the average more than is demanded, and have no grievance regarding working conditions, as we believe we can amply demonstrate.

Speaking for The Robert Reford Company, Limited, a total of 60 men (that being about 33 per cent of all the men employed in the Port under this category) are employed by us under the category of checkers, coopers and employees in that connection. Of these 60, no less than 24, or 40 per cent, are regarded as permanent staff men. Of this 40 per cent, 16, or say 70 per cent, which is 27 per cent of the whole, having an average service of 15 years, are presumable thoroughly experienced men, and, what is more, men who are responsible for results.

The average earnings per week of these 16 men are $47.34, which, on the basis of ten hours per day, excluding Sundays, is an average of 79 cents per hour.

The chief, or paymaster, who is thus directly affiliated, and is responsible to employers for results, is paid considerably more and constitutes a position to which it is possible that anyone of the rank and file may rise.

All these men, for good reasons, are in our opinion properly classified as checkers, coopers, or employees, or clerical forces, in that connection.

I do not know whether they are all members, whether presently or prospectively, of the

Brotherhood, or not, as we have not been furnished with the names of either the present or prospective members, but whether or not I presume that all will be directly affected by the final settlement of the present differences.

Nine of the 60 men, or say 15 per cent, are regarded as permanent hourly men, with an average length of service of over 7 years, are paid at rates varying from 47 cents and 57 cents per hour to 60 cents and 70 cents, and their average earnings per week during the last season are $37.55, as compared with $28.20 for continuous employment for a ten hour day at 47 cents.

The average earnings of these two groups, comprising 25 men, or 42 per cent of the whole, are therefore $44 per week or 73⅓ cents per hour for a ten hour day for six days a week.

Eight of the permanent staff come under the head of clerical forces, or employees in connection with checkers, but are stenographers, messengers, etc., whose weekly wages run from $15 to $40 and whose responsibilities are very different from those of experienced checkers, coopers and baggage handlers, and should not therefore be allowed to confuse the issue.

There then remain the casual hourly men of whom there are 27, or 45 per cent of the whole, with an average length of service of five years, mostly men well under 30 years of age. Of that category 9, or 33 per cent receive an average of $34.22, which is more than a full week's pay for continuous day employment at present rates, which, having regard to all the circumstances, is all they are entitled to, unless it be decreed that each and every employee is to be paid at the same rate whether he be the man of 30 years' experience and of suitable capacity and responsibility or the messenger, the stenographer or the college youth putting in his holidays. To so decree would be to advance the last named and reduce the experienced, deserving and responsible man to a common level, the logic of which I can in no way see. A beginner, say a youth of 17 years, cannot be worth 47 cents an hour, which is equivalent to approximately $1,500 per year, nor can the man who will never make a checker.

Finally comes the remainder of the last group, 18 men, or 66 per cent of the casual hourly men, being 30 per cent of the total 60 men being dealt with. They receive an average of $25.44, which, having regard to the conditions by which they must be listed, as what they are, viz., casual or overflow men or as representing the excess of supply over demand, and assuming, but not convinced, that they are industrious and willing to work if they have the opportunity required, that they possess the required ability and temperament to commend themselves to employers (but not the responsibility of experienced men), and that they are in no way objectionable to employers, but, on the contrary, give as satisfactory results as the best (which is assuming a good deal), their wage should be reasonably satisfactory.

The results shown above would appear to disclose a set of conditions approximating an ideal by which experienced men of long and satisfactory service and real responsibility earn an income which compares favourably with incomes earned in other professions, and others earn incomes to correspond with their experience or rather lack of experience and responsibility, term of service and ability, albeit incomes which compare favourably with incomes of men in other professions who are inexperienced in varying degrees and who are qualifying for the better established positions by the only effective means known, viz., quality of service, which requires time.

For instance, the incomes earned by checkers and affiliated callings compare favourably with incomes earned by rank and file in the banking business, learned professions and Government employ, and they work neither harder nor longer hours (with perhaps the exception of Government employees), nor is their work particularly fatiguing either physically or mentally. A difference may lie in the possible highest positions, but they are so few in proportion as to have but a negligible effect on the average. This difference applies, however, only to awards in excess of the instance referred to above of the chief of the checkers and affiliated callings, a man, who, like the successful banker or professional man, owes his advanced position as much to his determination to do his work regardless of the hours worked, as anything else.

So far as contract and working conditions are concerned, it would be subversive of discipline in the effect upon the general staffs if a group of employees, consisting as it does of 40 per cent of permanent staff, should be recognized as having the right to make demands of their employers for collective working conditions. The fact remains, that, so far as I know to the contrary, our regular men are satisfied that, upon the whole, they are doing as well as they can hope to do elsewhere or in other callings; if some of our casual men feel differently, I am sorry, but I do not believe that it is in the best interests of the greater number that their wages should be increased.

EXHIBIT "D"

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

MONTREAL, May 2, 1927.

Submitted on behalf of Checkers, Coopers and other employees of various Shipping Companies.

Mr. CHAIRMAN AND GENTLEMEN OF THE BOARD,—In presenting to you our views as to the contentions made by Colonel W. I. Gear on behalf of the shipping companies under date of April 27th, we wish to state that it will not be our intention to deal specifically with many of the points raised. We are of the opinion, indeed, that this should not be necessary as the statement of the shipping companies referred to, while very misleading in several essential respects, is but an attempt to divert the attention of the Board from the fundamental considerations of the case. We shall, however, take occasion to remark that the respect in which the statement of the shipping companies is misleading is that it makes reference to the wages of some comparatively higher paid employees in whom we are not interested. In other words the rates of pay of certain positions do not concern us because it is not contemplated that they should be included in any agreement that might finally be arrived at. An example of this is in the reference to the salary of the paymaster, and it is sought to be made to appear because this individual is receiving a comparatively high rate and

because it is possible that any one of the rank and file may rise to the position, that this fact constitutes justification for perpetuation of many of the unfair rates and conditions. The rate of the paymaster should, of course, be established out of consideration for the duties performed and the responsibilities of the position. However, we have not sought to urge anything before this Board in connection with this position because it is not one which would be included within the agreement.

Another respect in which statement of the shipping companies is misleading is in the references to the average earnings of various categories. We contend that the only fair basis upon which your Board can give consideration to this question of wages is that of basic rates and not average earnings. The basic earnings of checkers employed at 47 cents per hour is $28.20 per week, figuring ten hours work per day. If this weekly earning is augmented by overtime pay it should not be considered from the point of view of constituting a fair wage, because the overtime involved a great deal of sacrifice on the part of the individual to which similar classes of employees elsewhere whose conditions of employment permit of fair comparison are not subjected. In our first submission we mentioned that steamship checkers and other classes involved in these proceedings were being paid much lower basic rates than those in effect elsewhere for the same classes, and lower than the rates being paid to railway checkers doing similar work. This fundamental consideration, rather than a consideration of earnings based on overtime, should govern. It is logical to assume, when it is apparent that wages for this class of work are very much higher at other ports and in Montreal, that they are considered as comparatively fair, otherwise they would not have been agreed to between the steamship companies and their employees and the railway companies and their employees. We invite your attention to the comparisons outlined in our first submission.

It will of course follow that, with the establishing of a minimum rate, other rates should be adjusted proportionately. The question presenting itself therefore is as to what constitutes a fair minimum rate. We maintain our contention that this question is easily decided because of the very general existing rates for this class of work. A fair comparison lies in the rates paid to railway checkers; the work being performed by these latter is almost identical with that done by steamship checkers. The railway checkers present rate on the Montreal Wharf is 54 cents per hour; elsewhere in the Montreal Terminals railway checkers are receiving 57 cents per hour, and negotiations are now is progress with a view to increasing the rates of the wharf railway checkers. We have sought to establish the priciple that the steamship checkers should not be paid less than the railway checkers, and that we have succeeded in this is apparent from the report of the Board of Conciliation and Investigation established to deal with a similar dispute between checkers, etc., and the shipping interests of the Port of St. John, wherein the following occurs: "The claim made by the employers that the work done by the wharf and steamship checkers was not of such a responsible or onerous character as that of the railroad checkers was not sustained by the evidence, which established that the responsibility and character of the work was practically identical in both classes of workers." The Board followed this statement with a recommendation that the wages of the steamship employees should be adjusted to those in effect for the railway men, involving an increase of six cents per hour. In further consideration of the question of the minimum, we would urge that the present rate of 47 cents is entirely inadequate for another reason which is that this is lower than the rate now being paid railway truckers working in the same sheds as the employees now before you. These truckers are receiving 48 cents per hour and the condition of checkers working for less than truckers is one that, to the best of our knowledge and belief, exists nowhere else on the North American Continent.

The statement of the shipping companies that the earnings of a "casual" hourly rated man on the 47 cents per hour basis approximate $1,500 per year is very misleading when it is remembered that the season of navigation here is at the most thirty weeks, representing an earning of $846, provided that the employee receives steady work over this period, which is very seldom the case. We submit that a comparison of these checkers' rates with the rates of pay of employees in banking and other business is irrelevant, the only fair comparison being between these rates and rates paid elsewhere for similar work.

In connection with the last paragraph of the statement submitted by the shipping companies, in which it is inferred that a group representing 40 per cent of the permanent staff are seeking to obtain collective conditions, we desire to say that we are prepared to prove that we represent at least 80 per cent of the number of the employees whom we wish to have covered by contract, and in fact all who have no fear of intimidation are members of the organization. The inconsistency of the shipping companies in this particular becomes apparent when it is observed that they formerly entered into agreements with this body of employees under similar conditions and circumstances as those now obtaining.

Respectfully submitted,

F. H. HALL,

Vice Grand President.

40737—2½

Report of Board in Dispute between the Canadian National Railways and its clerks, freight handlers, etc., in and around shops and roundhouses.

The Minister received on April 23 a report of the Board of Conciliation and Investigation to which had been referred for adjustment various matters in dispute between the Canadian National Railways and certain of its employees being clerks, freight handlers, warehousemen, passenger station employees, stores employees, stationary engineers, stationary firemen, classified and unclassified labourers in and around shops and roundhouses, etc., as represented by the Canadian Brotherhood of Railroad Employees, the workmen concerned numbering 15,000. The report, which was signed by Mr. W. J. Donovan, chairman, and Mr. H. S. Ross, the employees' nominee, contained recommendations with respect to the matter of wages only. The differences as to working conditions are to be made the subject of negotiations between the parties concerned, and, in the event of their failing to reach an agreement, the Board will reconvene to consider this aspect of the dispute. A minority report was submitted by Mr. Peter White, the employer's nominee.

Report of Board

IN THE MATTER *of the Industrial Disputes Investigation Act, 1907, and in the matter of differences between the Canadian National Railways and certain employees of the said Railways, being Clerks, Freight Handlers, Warehousemen, Passenger Station Employees, Stores Employees, Stationary Engineers, Stationary Firemen, classified and unclassified labourers in and around shops and roundhouses, etc., as represented by the Canadian Brotherhood of Railroad Employees.*

To the Honourable,
The Minister of Labour,
Ottawa, Ontario.

SIR,—The Board of Conciliation and Investigation, established in the matter of differences between the Canadian National Railways and certain employees of said railways, being clerks, freight handlers, warehousemen, passenger station employees, stores employees, stationary engineers, stationary firemen, classified and unclassified labourers in and around shops and roundhouses, etc., as represented by the Canadian Brotherhood of Railroad Employees and composed of William J. Donovan, of Winnipeg, Manitoba, Chairman; Peter White, K.C., of Toronto, Ontario, nominated by the railways, and H. S. Ross, K.C., of Montreal, Quebec, nominated by the employees, convened in Montreal on Monday, the 4th day of April, 1927.

The employees were represented as follows:

Mr. M. M. MacLean, of Ottawa, Ont., secretary-treasurer of Canadian Brotherhood of Railroad Employees.

Mr. J. E. McGuire, of Montreal, Que., system chairman of Canadian Brotherhood of Railroad Employees for Canadian National Railways.

Mr. Robert Dykes, of Winnipeg, Man., general chairman of Canadian Brotherhood of Railroad Employees for Western Region, Canadian National Railways.

Mr. C. H. Minchin, of Calgary, Alta., secretary of system committee of Canadian Brotherhood of Railroad Employees of Canadian National Railways.

Mr. W. C. Smith, of Montreal, Que., general chairman for the Atlantic Region.

Mr. V. K. Polk, of Capreol, Ont., member of system committee.

Miss M. S. Gould, of Ottawa, Ont., assistant to Mr. MacLean in research work with Canadian Brotherhood of Railroad Employees.

The employers (the Canadian National Railways) were represented by:—

Mr. A. E. Crilly, of Montreal, Que., chief of wage bureau for the Railway System.

Mr. George Turvey, of Toronto, Ont., grievance clerk in general manager's office at Toronto, Ont.

Mr. W. C. Roberts, of Toronto, Ont., auditor of pay-rolls.

Mr. H. Morton, of office of assistant to general manager, Atlantic Region.

Mr. W. A. Kirkpatrick, of Saskatoon, Sask., superintendent of transportation.

Mr. Lorne Thompson, of Montreal, Que., manager of stores.

Mr. W. S. Harrison, of Montreal, Que., general auditor of pay-rolls.

At the opening session on the said 4th of April, 1927, it having been stated that both parties intended to file lengthy briefs in support of their respective contentions, and that, if an adjournment were made until the 12th day of April, 1927, the parties would in the meantime meet and endeavour to settle all differences between them in respect of rules and working conditions, and some question having arisen as to the matters covered by the application for a Board, it was requested

of the chairman that a statement or ruling be obtained from the Department of Labour, and an adjournment was accordingly made until the 12th instant.

Further sessions of the Board were held on the 12th, 13th, 14th and 15th instant, and then a further adjournment until the 18th was requested by both parties to the dispute, to enable the employers' representatives to prepare a further reply to the statement of the employees, and to enable the parties to further endeavour to settle at least the differences in reference to the rules and the inclusions.

On the Board re-convening on the 18th instant, it was reported that, while some progress had been made in settling disputes as to rules and working conditions, yet it was admitted by both parties that it appeared to be necessary for the Board to hear and consider the contentions of the parties in respect to all differences and matters covered by the application for the Board.

Further sessions were held on the 19th inst., 20th inst., 21st inst., and 22nd inst., when, both parties to the dispute having stated that all evidence had been submitted and arguments made in reference to that part of the dispute which directly referred to wages, and it appearing that, if the negotiations in reference to the matters in dispute before the Board other than wages were continued, settlement might yet be made between the parties, it was decided by the Board—all parties consenting—to postpone further consideration of such matters until a later sitting of the Board, and it was further decided that the Board should proceed to consider the evidence and arguments submitted in reference directly to the wages dispute and make an Interim Report thereon as quickly as possible, and, if a complete settlement should not be arrived at before the 15th day of May, 1927, the adjourned meeting of the Board to be held on such date and at such place as the Chairman of the Board should elect, keeping in mind the convenience of the parties to the dispute.

The brief filed with the Board by the representatives of the employees was a typewritten document of some 130 odd pages, with a number of illustrative charts made out in support of the contentions of the employees.

The employees made reference to numerous authorities, with the object of showing that it was a fundamental error to base wages, or any fluctuation in wages, merely on figures as to the variations in prices of certain specified commodities from time to time, or to say that figures on the cost of living, issued by the LABOUR GAZETTE, were sufficiently comprehensive (and particularly in view of the fact that such figures were admittedly compiled for comparative purposes), to give a proper or fair basis on which to compute a standard cost of living.

The employees, on the other hand, contended that a fair standard of living on which to base wages is that published as the Minimum Health and Decency Budget made by the United States Department of Labour Statistics.

The representatives of the employers say (page 2 of brief): "In 1918 employees of the Canadian railways in general also pressed for further increases in rates of pay and did so with some considerable justification, on account of further increased cost of living in this country."

It would appear, therefore, that both parties to the dispute agree that the cost of living is of prime importance in considering the question of the rise or fall of wages.

The employers contended that, from a consideration of the figures as to change in the price of commodities published in the LABOUR GAZETTE, it would appear that the cost of living had not increased within the last three or four years; and they contended, further, that the employees had made an agreement as to wages in the year 1924.

The employees replied that a more complete consideration of the elements which determine a cost of living budget would show that present-day wages were not even on a basis equivalent to pre-war times, if based on a proper cost of living budget.

The employees further contended that present-day wages were below even a reasonable cost of subsistence and that the Canadian dollar of 1914 was now equal to only 63.7 cents in purchasing power.

The representatives of the employees further alleged that the average rate of pay of the classes covered by the application is now only approximately $100 per month, and that, according to leading authorities for the purpose of estimating real cost of living figures, one basis for considering the family budget is five persons per family, consisting of the parents and three dependent children.

The representatives of the employees offered figures from the LABOUR GAZETTE to show that, taking only the absolute necessities of such a family of five persons in Canada, the real cost of living would be at the rate of $1,684 per year, and their estimate of the annual wages at present being paid to the applicants would average only $1,207 per year.

Further contentions made by representatives of the employees were as follows:—

(*a*) There was increased productivity of the workers.

(*b*) That the increase in wages to the workers in question was slower than to similar workers in other Canadian industries.

(*c*) That there was a decrease in operating expenses on the road in recent years, and that the railway system has made steady gains in its position financially, and in its operating revenue, but that these workers have not shared in this improvement.

(*d*) That the number of wage earners affected by this application was approximately 18,000.

The increase in wages requested by the workers before the Board of Conciliation was $20 per month for all monthly rated positions, and 10 cents per hour for all hourly rated positions.

The representatives of the railway contended and referred to evidence in support of the following contentions:—

(*a*) That the rates of wages being paid had maintained practically the same relationship to the cost of living (LABOUR GAZETTE estimate) throughout the period following the last agreement with the employees.

(*b*) That the wages being paid to the employees in question compare favourably with wages paid by other railways in Canada.

(*c*) That the said employees should not be termed "skilled workers."

(*d*) That favourable working conditions, regularity of employment, pass and pension privileges add to the value of such employment.

The railway representatives offered a number of other reasons why wages should not be increased at the present time, but appeared to agree with the contention of the employees that the question of cost of living is an important factor to be considered in reference to any proposed increase or decrease in wages.

Statements made by or with the concurrence of both parties to the Board gave particulars of increases granted to certain railway employees since the beginning of the present year, such increases varying from 2 cents per hour to 4 cents per hour.

It was also stated by the representatives of the railways that, since this Board was constituted, concessions had been granted to the applicants in improved working conditions which would be the equivalent of granting some extra wage remuneration to the employees.

It is the opinion of the undersigned members of the Board, after reading and considering the evidence and documents and charts and schedules submitted and hearing the arguments of the representatives of both parties, that, according to the merits and substantial justice of the case, an increase at the rate of four cents per hour should be granted by the employers to hourly rated employees, and an equivalent increase to monthly rated employees; and an additional one-half cent per hour to hourly rated employees, and an equivalent amount to monthly rated employees, to be used to equalize the rates of pay of employees in different sections of the same classes in the Central, Atlantic and Western regions.

And the Board so recommends.

All of which is respectfully reported.

(Sgd.) W. J. DONOVAN,
Chairman.

(Sgd.) HOWARD S. ROSS,
Member.

Dated at Montreal, Que., this 22nd day of April, A.D. 1927.

Minority Report

To the Honourable,
The Minister of Labour,
Ottawa.

SIR,—As a member of the Board of Conciliation appointed under your hand and seal of office on the 21st day of March, 1927, I beg to submit the following:

By the courtesy of my colleagues on the Board I have had the advantage of hearing read the report and findings in which they concur, and, as therein are set out the names of the members of the Board, of the persons appearing on behalf of the parties, the dates of sittings, of adjournments and the purposes thereof and the evidence, exhibits and submissions on behalf of the respective parties, it is unnecessary for me to repeat or comment on this part of their report. The proceedings before the Board were characterized throughout by good nature and an evident desire on both sides to bring the issues carefully and fairly to the attention of the Board, and the respective briefs filed displayed an amount of research quite, I should think, beyond the usual.

As originally presented, the case for the employees was that wages should be fixed solely with reference to some standard of living and without reference to the ability of the employer to pay wages according to that standard. It was suggested that this should be what is called a "minimum of health and decency" standard specified in a commodity budget constructed by the United States Department of Labour statistics and consisting of certain commodities and services for the maintenance and education of a family of five persons, i.e., parents and three children under fourteen years of age. This budget was said to require for its purchase $2,161.20 per annum at retail prices presently prevailing in Canada.

As the hearings progressed it became apparent that, under existing conditions in Canada, wages at this rate would be unreasonable, and the employees' representatives modified their demands to the increases asked for, viz:— $20 per month for monthly rated employees and 10 cents per hour for hourly rated employees, at the same time pointing out that, at this increase, the wages would fall, not only far short of this "minimum of health and decency" standard, but also of what is called a "subsistence budget," being that set up by your Department and published in "The LABOUR GAZETTE," and which, at 1926 prices, is said to require $1,554 per annum for a family of five.

It developed that, in answer to a questionnaire addressed to some 17,000 or 18,000 of the employees involved, 4,233 replied, and of these 3,049, or 72 per cent, are married. As the married men are the most interested ones and more likely to reply to such a questionnaire, it is almost certain that a census of these employees would disclose that a much smaller percentage than 72 would be found to be married, and a still smaller percentage to have three dependent children. It was also disclosed that the period for which the wage earner might expect to have three dependent children was only five years out of his total earning life.

It also appeared that there were no data, certainly no sufficient data, from which any one could say that either of the above standards, or any standard artificially or theoretically set up, should be the yard stick by which to measure the adequacy or reasonableness of any wage rate at any given time.

It is unquestioned that cost of living, or rather increase or decrease in the cost of living at one period as compared with another, is one important element to be taken into consideration in endeavouring to fix a fair wage at any given period.

It was shown that in 1920 a Board of Conciliation concluded that rates of pay as recommended by them in the report of a majority of the Board, dated June 8th of that year, were "fair, reasonable and adequate, having regard to the present cost of living, the nature, character and importance of the services and the remuneration paid for similar services by other employers in this country."

The existing schedules of rules governing working conditions and rates of pay were fixed after long negotiations between representatives of the employees and the railway and became effective for the Western Region, September 16, 1924; Central Region, August 1, 1924; Atlantic Region, September 16, 1924. Having been found once by a Board of Conciliation in 1920 and once by agreement of the parties in 1924, it remains to be seen whether anything has transpired to so alter conditions as to render a change in the rates of pay just and reasonable.

It has been suggested that the rates of pay for these employees have always been too low. It is clear that these rates are below the amounts required to supply the budgets above mentioned for five persons; but are they low as compared with what are received by other workers? Table VII on page 20 of the employees' brief, as compared with Table XXI on page 77 of the same brief, shows that annual wages (as reported by the Dominion Bureau of Statistics) were in 1914, $612.16; in 1926, $1,054.51; while Table XXI shows that, for the classes of employees involved in the present dispute, the annual wage was in 1914, $627; and in 1926, $1,207.

Some allowance must be made because the figures in Table XXI are on a full time basis, whereas in Table VII they are on actual time basis, but, after making due allowance, it will be seen that the wages of the employees involved are not low by comparison. Again in Table XXV, p. 80, employees' brief, appear figures showing annual earnings of the classes of employees involved in this dispute on all railroads in Canada of whom the annual earnings were in 1914, $612; in 1926, $1,016; showing that, as compared with similar classes of workers on other railways, those of the Canadian National are much higher, almost 20 per cent.

These tables also contain figures as to the cost of living, the increase of which was urged as a reason for an increase in wages.

Table VII shows that, according to the figures of the Department of Labour at Ottawa, the cost of living in 1926 was less than in any year since 1918.

An examination of Table XXI shows the same fact except as to the year 1924, which was slightly lower than 1926.

Table XXV contains the same cost of living figures as Table XXI.

These tables also show that, since 1921, there has been very little if any change in the "cost of living," as that term is used in these various tables, and also that the general trend has been slightly downward, and the present trend seems to be in the same direction.

I have also carefully examined the schedules of rates of pay for similar classes of employees on the Canadian Pacific Railway and compared them with the Canadian National schedules, and find that in many cases the rates on the Canadian National are higher for the same offices.

Reference has been made to the issue of the LABOUR GAZETTE for March, 1927, as showing an increase in the cost of living. The actual figures there do not seem to bear out that contention. See page 312. The cost of 29 staple articles is given as follows:—

February, 1927..	$11 23
February, 1924..	10 75
February, 1922..	10 61
February, 1920..	16 92

For the Labour Department's budget, excluding clothing, the figures are:—

February, 1927..	$21 46
February, 1924..	21 18
February, 1922..	21 07
February, 1920..	24 71

On page 322 there is given a table showing, by an index number, the changes in the cost of living since 1913, and the column "all items" shows that the index number for:—

February, 1927, is..	158
March, 1920, is..	192
March, 1921, is..	175
March, 1922, is..	158
March, 1923, is..	160
March, 1924, is..	157
March, 1925, is..	157
March, 1926, is..	160

thus showing very little variation since 1921 —not enough in any event to produce an appreciable effect on the buying power of wages.

If the matter stood here, that is to say, if the case for the employees rested on the grounds of increased cost of living, or a comparison of rates of pay with rates for similar employees on other railways, or in other industries, it seems clear to me that there is no justification for any increase in the rates of pay to the employees involved.

It is, however, urged that the Canadian National Railways are in a better position than formerly, that their gross earnings are more than sufficient to meet their operating charges and fixed charges payable to the public, and that these employees are entitled thereby to a share in the increased earnings. If by reason of their having received formerly less than was paid by other railways, or if the railway earnings were as a matter of fact sufficient to meet their whole fixed charges, I could see some force in this contention, but, as neither reason exists, the contention, it seems to me, is not tenable.

A proper consideration of the matters in question, however, seems to me not to end here. It was brought to the attention of the Board that recently the Canadian National Railways had, by agreement with certain other employees, agreed to certain increases in rates of pay, e.g., maintenance of way employees—an increase of 2 cents per hour; signal maintainers, 2 cents per hour; electricians, 2 cents per hour; and conductors and trainmen about 6 per cent increase.

It seems to me, therefore, not just and reasonable that the employees, parties to this dispute, should be treated differently from other employees. It was also brought to our attention that there are negotiations pending which may or may not result in increases of pay to other classes of employees and that this may be the case on all Canadian railroads.

Having regard to this situation I am of opinion that an increase should be granted to the applicants, and, after very careful consideration, have come to the conclusion that an increase of two cents per hour for hourly rated employees and an equivalent increase to monthly rated employees would be fair and equitable, and so recommend.

It was also brought to our attention that there are a good many inequalities between the different groups of the same class of employees, particularly between certain employees on the old Grand Trunk System and on the rest of the system. I think these inequalities should be to a large extent at least obviated and I therefore recommend that an additional one-half cent per hour for hourly rated employees and the equivalent to monthly rated employees be granted, the amount to be pooled and used for the purpose of equalizing these rates of pay as may be determined by the committees of the employees and of the railway acting jointly.

All of which is respectfully submitted.

Montreal, April 22nd, 1927.

(Sgd.) PETER WHITE,
Member of Board.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1927

THE number of strikes and lockouts in existence during April was twelve as compared with ten the preceding month. The time loss for the month was greater than during April, 1926, being 10,082 working days as compared with 8,773 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Apr., 1927	12	853	10,082
Mar., 1927	10	520	7,312
Apr., 1926	14	924	8,773

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 473 workpeople, were carried over from March, and six disputes commenced during April. Two of the strikes and lockouts commencing prior to April terminated during the month, and five of the strikes and lockouts commencing during April also terminated during the month. At the end of the month, therefore, there were on record five strikes and lockouts, as follows: Ladies' clothing factory workers, Toronto, Ont.; cap makers, Toronto, Ont.; Men's clothing factory workers, St. Hyacinthe, P.Q.; electrotypers, Toronto, Ont., and men's clothing factory workers, Montreal, P.Q.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected although the unions or organizations concerned have not yet declared them terminated. Information is available as to four such disputes, namely: metal polishers at Sackville, N.B., March 15, 1921; moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, March 24, 1925, and fur workers at Winnipeg, Man., September 25, 1926.

Of the disputes which commenced during April one was against the discharge of an employee, one against alleged violation of agreement, one against a reduction in wages, one for increase in wages, one for higher wages, regular hours and overtime and one, an alleged lockout, for union membership. Of the seven strikes which terminated during the month two were settled by replacement of workers, one was in favour of the employer, two in favour of the employees, and two resulted in a compromise.

One minor dispute occurred during the month, involving four electrical workers employed on the construction of a building at Vancouver, B.C., for four hours, causing a time loss of two man working days. The strikers had demanded the employment of union members only and at noon on the same day resumed work, their demands having been granted.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—In this dispute, which commenced July 28, 1926, the union members in the various factories and shops in Montreal struck to secure union wages and working conditions in non-union establishments, and to enforce such conditions in certain union establishments, the majority of the employers signing agreements with the union, some shortly after the beginning of the dispute and others during the autumn. At the end of the year only two or three establishments were affected, and these had substantially replaced the strikers. From time to time the strikers still out secured work elsewhere, and by the end of April there were reported to be none on the strike list of the union.

MEN'S CLOTHING FACTORY WORKERS, ST. HYACINTHE, P.Q.—This dispute, commencing in Montreal early in 1926, was somewhat affected by the above dispute in the other clothing factories during the latter half of the year. In the meantime, however, the employer had opened an establishment in St. Hyacinthe and on February 7, 1927, a cessation of work occurred there, some of the employees demanding higher wages, shorter hours

and recognition of the union. The employer partly replaced the strikers and sent out work to contractors, etc. The employees on strike secured work with other employers, and by the end of April there were reported to be only ten still out.

COAL MINERS, INVERNESS, N.S.—In this dispute, causing a cessation of work toward the end of March, work was resumed on April 21, the employer having signed an agreement with the United Mine Workers of America providing for the employment of members

STRIKES AND LOCKOUTS DURING APRIL, 1927

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts occurring prior to April, 1927.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Inverness, N.S.....	350	5,600	Commenced Mar. 21, 1927, for closed shop. Terminated April 21 in favour of employees.
MANUFACTURING—			
Clothing (including knitted goods)—			
*Ladies' clothing factory workers, Toronto, Ont.	4	96	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing factory workers, Montreal, P.Q.	30	360	Commenced July 28, 1926, for union wages and working conditions in non-union shops. Employment conditions no longer affected.
Cap makers, Toronto, Ont....	5	120	Commenced Aug. 27, 1926, for employment of union members only. Unterminated.
Men's clothing factory workers, St. Hyacinthe, P.Q.	80	1,080	Work ceased Feb. 7, 1927, for higher wages, shorter hours and recognition of union. Unterminated.
Printing and Publishing—			
Electrotypers, Toronto, Ont..	4	96	Commenced Dec. 20, 1926, against discharge of employees for union activity. Unterminated.
(b) Strikes and Lockouts commencing during April, 1927.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, New Waterford, N.S.	55	†275	Commenced April 11, 1927, against discharge of employee. Terminated April 13 in favour of employer.
MANUFACTURING—			
Boots and Shoes (other than rubber and felt)—			
Boot factory employees, Toronto, Ont.	65	618	Commenced April 6, 1927, against alleged violation of agreement. Terminated April 18, 1927. Demands partially granted.
Clothing (including knitted goods)—			
Men's clothing factory employees, Montreal, Que.	109	1,690	Commenced April 13, 1927, against reduction in wages. Unterminated.
CONSTRUCTION—			
Buildings and Structures—			
Cement Finishers, Montreal, P.Q.	115	115	Commenced April 19, 1927, for increase in wages. Terminated April 20 in favour of employees.
Plumbers, Windsor, Ont.....	3	15	Alleged lockout, April 5, 1927, for union membership. Employment conditions no longer affected.
TRANSPORTATION—			
Local—			
Teamsters, Saskatoon, Sask..	33	17	Commenced April 4, 1927, for higher wages, regular hours and overtime. Terminated April 4. Compromise.

*Reports indicate that the strikers have been replaced, but there are still a number of employees out and on the strike benefit list of the union.

†225 indirectly affected for one shift.

of that union only. The agreement also provided for a wage scale about four per cent lower than that previously in effect, negotiated on the basis of a wage scale for Inverness on the same level as in other mines in Cape Breton Island. Employees not members of the United Mine Workers of America during April had applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, but had requested the Minister of Labour to hold their application in abeyance pending the result of further negotiations. When operations at the mines were resumed under the above conditions, these employees, not being allowed to resume work, again applied for a Board and the Minister established such a Board on April 28 (See page 491).

COAL MINERS, NEW WATERFORD, N.S.—On April 11 a number of boys ceased work to secure the reinstatement of a boy who had been dismissed for "trip riding," which, being a dangerous practice, was against the mining laws. Their places were taken by other miners for that shift, but during the night shift the mine was tied up, two hundred miners being indirectly involved temporarily. The boys continued on strike the next two days, but as their places were taken by the other miners, the mine was operated. On April 13 the boys returned to work, their demands not being granted.

BOOT FACTORY EMPLOYEES, TORONTO, ONT.—A cessation of work on April 6 followed negotiations during some days as to an alleged violation of the agreement between the employer and the union. On April 18 work was resumed, the employer having agreed to give increases in wages, alleged to be called for by the agreement, to certain of the persons concerned, certain others to have wages increased as the forelady recommended. It was also agreed that in future when grievances were discussed, there would be no cessation of work until ten days had elapsed.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—A cessation of work occurred on April 16 involving sixty-five males and fifty-five females against an alleged reduction in wages of some employees contrary to the agreement. At the end of the month no settlement had been effected.

CEMENT WORKERS, MONTREAL, P.Q.—Cement workers on two jobs in Montreal ceased work on April 19 for an increase in wages from 65 cents per hour to 75 cents. The following day their demands were granted and work was resumed.

PLUMBERS, WINDSOR, ONT.—Certain plumbers having been discharged on April 5, the employer alleging insubordination, the union declared it a lockout, alleging that they were in reality discharged for joining the union. At the end of the month the discharged employees had secured work elsewhere but the dispute had not been declared closed by the union.

TEAMSTERS, REGINA, SASK.—Teamsters employed by a cartage company ceased work to secure an increase in wages from $4 per day to 50 cents per hour, with overtime after ten hours. It appears that they had been paid $4 for a ten-hour day but had a certain amount of work to do before and after the ten hours and sometimes had to work overtime without extra pay. Work was resumed the same day, it having been agreed that the wage rate would be 45 cents per hour and that overtime would be paid for. Other points were to be adjusted later.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lock-outs in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1927, as an addendum to the review of strikes and lockouts in Canada during 1926. The latter included a table summarizing principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* reports 22 new disputes in the month of March, 1927, and 13 disputes still in progress from the previous month, which makes a total of 35 disputes in progress during the month, involving 14,000 workpeople and resulting in an approximate time loss of 137,000 working days. Of the 22 disputes beginning in the month, 13 arose out of questions of wages, 4 out of questions respecting the employment of

particular classes or persons and 5 out of other questions. During the month, 13 disputes were settled, 3 in favour of workpeople, 6 in favour of employers and 4 compromised.

A dispute of coal miners took place in Wales when 2,000 members of the South Wales Miners' Federation refused to work with non-members. The dispute was settled within a few days by the non-members joining the Federation.

Five thousand building operatives in Glasgow and the west of Scotland were concerned in a dispute "against proposed reduction in wages of masons' and bricklayers' labourers employed by members of a non-federated Employers' Association below the rate fixed under the national building trade agreement." The dispute lasted three weeks, after which time work was resumed pending reference of the dispute to the Industrial Court for its interpretation of the agreement.

United States

In the *Monthly Labour Review* for April, 1927, preliminary figures for February show 60 disputes beginning in the month as compared with 46 in the previous month. The number directly involved is known only for 44 disputes and is 8,762, making the average number of employees per dispute 199. Of the 60 disputes, 15 were in the clothing industry, 11 in building trades, 5 in the textile industry and the remaining in various other industries.

A strike involving about 1,000 shingle mill workers in several mills in the State of Washington began February 1, against a reduction in wages, and is reported to have terminated successfully on March 11.

On February 4, a strike of 705 coal miners took place at Plains, Pennsylvania, because of a "dispute over bottom rock rate in bottom 5-foot vein", and 2,041 employees of the same company at other collieries went out on a sympathetic strike on February 8. Work was resumed in all the mines on February 12 under the same conditions as prevailed before the dispute.

Bituminous Coal Miners' Dispute.—As stated in the April issue of the LABOUR GAZETTE, page 373, the cessation of work on April 1, in Illinois, Pennsylvania, Ohio, Indiana, Kansas, Oklahoma, Iowa and Missouri, owing to the failure of the union and the operators in the four states first mentioned, to reach an agreement before the expiring of that in force, involved about 200,000 workmen, and a settlement was not reached during April. The union had announced that the miners would work in the mines of operators who would agree to the wages and working conditions of the expiring agreement, and a number of operators of relatively small mines made such an arrangement. On the other hand a number of operators, including some with large collieries, undertook to operate on the non-union basis, at reduced wage scales, and were reported to be securing some miners. In Indiana, operators of "stripping" mines reached an agreement with the union, providing for substantially the same wages as in the expired agreement with some adjustments in working conditions, and the operators of "shaft" mines in that state toward the end of the month entered into negotiations with the union. It was reported that non-union mines and the relatively few union mines operating were producing each week practically enough coal to meet the current demand, and that the large stocks in reserve were not being drawn upon to a great extent, so that it appeared that the dispute would probably last for some time.

Plumbers' Dispute, New York.—On April 1, 1,500 plumbers in Brooklyn, N.Y., went out on strike to obtain a wage increase from $12 to $14 per day and a 5-day week. They were joined by the same number of plumbers' helpers, who asked for $9 per day. In protest against this strike, the master plumbers, members of the Building Trades Employers' Association, on April 28, locked out all the plumbers and plumbers' helpers in their employ, to the number of 7,000 in New York City, until such time as the plumbers in Brooklyn withdrew their demand for increase in wages and returned to work. This lockout was alleged to be in violation of an agreement in effect in two of the five boroughs of New York.

Belgium

In January, 1927, 11 strikes began and 12 others were still in progress from the previous month, making a total of 23 disputes in progress during the month. These disputes involved 3,714 workpeople and caused a time loss of 52,738 working days. Eight of the 11 disputes beginning in the month were over wages questions. Eleven disputes terminated in the month, 3 in favour of workpeople, 5 in favour of employers and 3 by compromise.

France

There have appeared reports in the press as to a dispute involving 30,000 employees in an automobile manufacturing establishment in Paris. It is indicated that a number of communists employed in this establishment

quit work after a series of intermittent disputes, and the management closed down the plant on April 26.

India

Statistics on industrial disputes in India for the year 1925 show the total number of disputes reported for that year to be 134, as compared with 133 in the preceding year. The number of workers involved was 270,423 as compared with 312,462 in 1924, and the time loss was 12,578,129 working days as compared with 8,730,918 in 1924. In 1925, disputes in cotton mills account for 88 per cent of the time loss in the year and disputes on railways (including railway workshops) for 6 per cent.

Of the 134 disputes, 65 occurred over the question of pay and 35 were either demands for dismissal of certain employees or reinstatement of employees dismissed.

One hundred and thirty-three disputes terminated during the year, 17 entirely in favour of employees, 27 partly in favour of employers and 89 unfavourable to employees.

Japan

Statistics of industrial disputes in Japan refer to strikes only. The United States *Monthly Labour Review* quotes a report from Japan on strikes in that country for the year 1926. There were 1,005 labour disputes during the year, which is 200 more than the preceding year. The number of workpeople involved was 100,000, an increase of 10,000 over 1925. Of the 1,005 disputes, 271 were to secure higher wages, 89 against decrease in wages and 181 for fixing definite discharge allowances. Only 2 per cent of the demands were granted without modification and 3 per cent of the demands were completely withdrawn. In all other cases disputes were adjusted by compromise.

Netherlands

Revised figures for December, 1926, show 12 disputes beginning in the month, involving 189 workpeople.

In January, 1927, 23 disputes began involving 622 workpeople.

Preliminary figures for February, 1927, show 6 disputes beginning in the month, 4 of which involved 208 workpeople.

Labour Attitude Towards Trusts and Cartels

"Industrial and Labour Information", the weekly publication of the International Labour Office, in a recent issue deals with process known as "Rationalization" of industry and with the attitude of workers' organizations towards this movement. A brief article on the subject prepared in the International Labour Office contains the following observations:

"The term "Rationalization", which is of recent adoption in connection with economic problems, is apt to be interpreted in a variety of senses. Sometimes it is used to describe those improvements in the technique of industry which fall more correctly within the scope of "scientific management." As a rule, however, the word denotes something more than the organization of a single industrial enterprise on the lines of maximum efficiency, whether from the point of view of equipment and lay-out or from the point of view of the fullest possible utilization of its human and business resources. "Rationalization", in the sense in which it is most frequently used nowadays, covers the organization of a given industry as a whole. Its primary purpose is the elimination of waste and the reduction of costs of production to the absolute minimum. Its motive is the desire to minimize the casualties of the intensified warfare between rival industries in different countries which has resulted from the economic upheaval of the war and post-war period. Its form is that of the trust, combine or cartel. Its scope is national or international. Its activity may take the form of price-fixing, control of supplies of raw material, regulation of output, marketing arrangements, or merely the obviating of intermediate profit-making in the stages between the getting of the raw material and the selling of the finished product, by the organization of a principal industry and all its ancillary industries "from top to bottom." But whatever form it may take, "Rationalization" of industry is undoubtedly one of the most striking developments of the day, and one which is being watched with interest and perhaps also a certain anxiety by organized labour. What its ultimate effects on the conditions of work and life of the worker will be remains to be seen; but in the meantime there appear to be signs of an effort on the part of workers' organizations to arrive at a policy which should determine their attitude towards this process.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND THE LEGISLATURES OF QUEBEC AND MANITOBA IN 1927

Canada

SEVERAL measures of interest to labour were enacted during the last session of the Parliament of Canada which opened on December 10, 1926, and closed on April 14, 1927.

An amendment to the Trade Mark and Design Act provides for the registration of union labels. The text of this Act was published in the LABOUR GAZETTE for April, 1927, page 380.

An amendment was made in the Act to provide compensation where employees of His Majesty are killed or suffer injuries while performing their duties. This Act was passed in 1918 and enabled employees of the Government of Canada to claim compensation for injuries under the law of the province where the accident happened.* The amendment is designed to remedy the situation arising from the fact that the Province of Prince Edward Island has no general workmen's compensation law and makes the law of New Brunswick applicable to employees of the Federal Government employed in the Province of Prince Edward Island.

An amendment to the Canadian National Railways Act gives the Board of Railway Commissioners jurisdiction over maintenance in so far as such maintenance affects the safety and protection of railway employees and of the passengers upon the railway.

The Old Age Pensions Act provides that the Government of Canada may make an agreement with the government of any province for the payment to that province of one half of the net sum paid out for old age pensions, under conditions specified in the Act and in the regulations made thereunder. The text of this Act was published in the LABOUR GAZETTE for April, 1927, at page 375.

Two bills of labour interest were introduced but not passed. One of these bills proposed to amend the Criminal Code by repealing the sections added in 1919, relating to unlawful associations and the printing and distribution of seditious literature, and re-enacting the sections which were repealed in 1919, providing that a person might do certain specified things without being deemed to have seditious intention, and fixing the term of imprisonment for sedition. The other, a bill to amend the Immigration Act, would have repealed the amending Act of 1919 which permits deportation of any person not a citizen of Canada who seeks to overthrow the Government or otherwise incites to public disorder. These two bills were passed by the House of Commons but were defeated in the Senate.

Quebec

Several measures affecting labour were enacted at the session of the Quebec Legislature which opened on January 11, and closed on April 1, 1927.

An amendment to the Workmen's Compensation Act, 1926, postponed the coming into force of that Act from April 1, 1927, until April 1, 1928 (LABOUR GAZETTE, April, 1927, page 346, etc.).

An Act to incorporate the Quebec Mutual Casualty Company authorizes the company, among other things, to provide insurance against liability for accidents to employees, and also accident and safety service.

An Act to prohibit the levying of taxes on persons outside of a municipality who work therein, forbids a municipality having a population of five thousand or more to levy any tax, duty or assessment upon any person working within the limits of its territory for the sole reason that such person does not reside in the municipality. Existing by-laws or other ordinances imposing such taxes cease to have effect from April 1, the date of the coming into force of the Act. Taxes which were due on that date may, however, be collected.

The Mining Act was amended to require the person operating a mine or quarry, or his representative, to send to the Minister of Colonization, Mines and Fisheries a written notice of any accident happening by reason of or in the course of the work. Formerly a notice was only compulsory in case of accidents resulting in loss of life or serious injury.

*A statement on proceedings under this Act during the fiscal year ended March 31, 1926, was included in the last annual report of the Department of Railways and Canals, and was outlined in the LABOUR GAZETTE, January, 1927, page 37.

The Motor Vehicle Act was amended to forbid the issuing of licenses and permits to drive motor vehicles to persons between the ages of eighteen and twenty-one years unless the written consent of the parent or guardian is obtained.

The Quebec Election Act was amended to provide for the establishment of special polling stations for railway employees, navigators and commercial travellers. These stations will be open from 1 p.m. until 10 p.m. of the two days which are not holidays immediately preceding the general polling date. Each elector wishing to vote at a special polling station must obtain a certificate which will be furnished to him free by the returning officer or election clerk of the district. A voter who has obtained a certificate may vote at any polling station in the district, delivering his certificate to the deputy returning officer and signing, in his presence, a declaration under oath that he is the elector mentioned in the certificate and is a railway employee, navigator or commercial traveller and also that he expects that he will be absent from home on polling day in pursuit of his occupation.

Manitoba

During the session of the Manitoba Legislature which opened on February 3, and closed on April 9, 1927, a number of labour laws were amended, including those dealing with the regulation of mines and factories, and with the relation of master and servant.

The Mines Act was amended to permit the making of regulations by the Lieutenant-Governor in Council for regulating the age and sex of persons who may be employed in mines, and for setting the maximum number of working hours; for the protection of workmen employed in and about mines, including the care and use of explosives; for the installation of proper ventilation and sanitary conveniences; for the protection of all working places; for provision of suitable dressing rooms, equipment and means of furnishing first aid to the injured; for the safety of cranes and all hoisting and lowering equipment; for the use of electricity; for fire prevention precautions and firefighting appliances; for the inspection of mines and mine works, and for safety measures in connection with unworked mines. The rules contained in Section 49 of the Act may be repealed or amended and penalties may be prescribed for infraction of regulations.

An amendment to the Factories Act empowers the Lieutenant-Governor in Council to make regulations governing manufactures and trades in which there is a special fire hazard such as dry cleaning and dry dyeing, cleaning and pressing businesses, and the storage, sale, carriage and disposal of gasoline or other inflammable material. These regulations may require that persons carrying on such businesses should take out an annual license.

The Masters and Servants Act was amended to enable a workman suing for wages to obtain solicitors' costs up to $5 if the claim is less than $50 and up to $15 if the claim is more than $50. If the complainant undertakes to make service of the summons upon the defendant the costs of the complaint and summons and hearing fee may not exceed $2. If the justice of the peace is satisfied that the servant is unable to pay the costs or fees he may dispense with payment or extend the time until after judgment when, if judgment is given against the master, the ordinary costs with solicitors' costs can be added to the amount ordered to be paid. This amendment comes into effect on May 1, 1927.

The Child Welfare Act was amended to permit a children's aid society having under its control savings from earnings belonging to a child under its care to invest such earnings in securities in which a trustee is authorized by the Manitoba Trustee Act to invest trust funds.

A Resolution was passed during the Session reaffirming the endorsation by the Legislature of the principle of old age pensions, noting with satisfaction the enactment of legislation on the subject at Ottawa, and expressing the view that, in order to make effective an old age pension scheme in Manitoba as early as possible, representatives of Manitoba should participate in any proposed conference between representatives of the Government of Canada and of the Governments of the Provinces held for the purpose of considering ancillary legislation.

A Bill providing for a periodic rest day was introduced but not passed, the question of the periodic rest for employees being referred to the Bureau of Labour with instructions to make a thorough investigation during the recess, and make recommendations to the House before the next session of the Legislature. Bills to provide for the settlement of trade disputes and to amend the Minimum Wage Act, were also introduced but failed to pass.

In the Speech from the Throne at the opening of the Session it was announced that the Government would cause an enquiry to be made into the causes of and remedies for seasonal unemployment. A commission of three members was accordingly appointed on May 3 to conduct this enquiry.

LUMBER INDUSTRY AND WORKMEN'S COMPENSATION IN NEW BRUNSWICK

Report of Provincial Royal Commission

THE report of the Royal Commission who have been investigating the effect of the Workmen's Compensation Act upon the lumber industry in New Brunswick was tabled at the recent session of the provincial legislature by Premier Baxter, along with the report of the Royal Commission on means of stabilizing the lumber industry in the province. (LABOUR GAZETTE, November, 1926, page 1045.)

Mr. Justice Grimmer was chairman of the Royal Commission investigating the operation of the Compensation Act, with F. C. Beateay, of Saint John, representing the companies and operators, and George A. Stone, of Moncton, representing Labour. Their eight recommendations include suggestions for introduction of more Safety First and First Aid methods in some operations as well as at mills, further reduction in the operating expenses of the Compensation Board, including the employment of a full time medical officer, more co-operation between the Workmen's Compensation Board and the Lumbermen's Safety Association, several relatively unimportant changes in the law and reduction of the period when application may be made for compensation from one year to six months.

The Royal Commission's report in part follows:

The Report

From the evidence that was submitted we readily came to understand the comprehensive nature of the Compensation Act, the complexity of the problems involved therein and the almost vital necessity that the purpose and intention of the Act should be effectively carried out if possible without making it oppressive upon any particular industry, but preserving to labour all the rights and privileges reserved to it by the statute.

From the lumber industry came the charge of complaint that the operation of the Act had become too expensive, in fact had become oppressive and that it was necessary if the same was to continue that some change should be made whereby the cost to which the lumber operator was subjected to maintain the Act should be materially reduced. On the other hand it plainly appeared that the employee had little or no fault to find with the compensation allowed under the Act and was practically satisfied therewith though some suggestions were made looking to the payment of a somewhat higher percentage of compensation for disability.

Considering, then, the remedy, if any, to be found for the alleged excessive charges upon the lumber industry, we treat the matter as follows:

1. *Prevention of Accidents.*—We are convinced that many accidents occur through carelessness and inattention to rules and regulations on the part of the employee and for want of proper instruction being given to the men on the part of the foreman in charge. Some of the lumber operators of to-day have posted safety rules and provided safety devices for the avoidance of accidents and the preservation of human life, which, if by co-operation among the employees or as the result of instructions by the foreman were more fully observed would undoubtedly tend in a very large measure to reduce accidents. what has been done by some should likewise be carried out in this respect by all lumber operators, and in all sawmills, logging camps and woodworking establishments there should be posted a set of safety first rules that all employees should be compelled to observe under penalty of discipline.

2. *First Aid.*—We are convinced that the subject of first aid has not received the consideration it demands, particularly in the smaller lumber operations, where many accidents occur. There is no reasonable doubt but that from the treatment accorded an accident immediately after its happening largely depends the results, whether of a beneficial or injurious nature to the patient, and the consequent length of time the Compensation Act may be applied to the case. It becomes important, therefore, that all operators should not only in their own interest, but that of the employee, be compelled to have first aid appliances ready at hand in case of accident, and should also have some employee sufficiently and properly instructed in the use thereof, who would have full charge of the case, and whose duty should be to see that they were kept in order and always ready for immediate use. This is especially necessary in respect to camp foremen. To further assist in this respect we beg to suggest that all Government scalers, fire wardens and forest rangers before entering upon their respective duties be required to take a course in first aid work which shall be prescribed and given by

the Chief Medical Officer or some other competent medical officer connected with the Health Department free from all cost or charge to the several applicants. For the purpose we seek to accomplish by this suggestion we further beg to point out that what we have stated in respect to Government scalers might also very well and to much advantage be applied to all scalers appointed and employed by the lumber operators, and be made compulsory, as, from the information we have gained, we are convinced too much attention cannot be given in the interest of the operator as well as the employee to the application of all safety first measures, in order to assist in minimizing accidents and extended casualties.

3. *Administration of the Act.*—We have carefully and critically scrutinized the administration of the Act by the present Board of Commissioners, and are convinced that it is now well alive to the necessity of conducting the Department with a view to minimizing expense, and has taken stringent measures in many respects to protect the several classes with which it has to deal, in so much that during the past year the result of the efforts has been to effect a very marked reduction in the cost of administration. At the same time we are of the opinion there is still room for improvement, and that a further reduction in expense can be attained by the employment of a fully qualified medical officer who shall devote his full time to the work of his office. At present only one doctor is employed upon half time, which can only mean that no matter how earnest and desirous he may be of rendering the best possible service, he cannot be expected to give, and does not give, that attention to the many duties falling upon him that the occasion requires. A doctor upon full time will have the opportunity of making minute inquiries regarding accidents; of personally attending to very many of the more acute injuries, of examining into cases of alleged malignering; of supervising all hospital cases; of examining all bills for medical aid; of assuming the responsibility of declaring when hospital aid is no longer necessary, and certifying when cases are no longer entitled to the benefit of the Act. He should have charge of and supervise all field work and be held responsible for the proper performance of duty by the officials of his staff. To assist in the work of this Department we are satisfied there should be two competent first aid men employed, who, with the permanent doctor should comprise the medical staff.

We beg to suggest that these men may very well be the present Inspector and Factory Inspector, whose duties now take him to all parts of the province, making it possible for him without additional expense to render much efficient aid, not only in relieving suffering but in promptly reporting injuries that come under his notice. He should be required to perfect himself in first aid instruction to the satisfaction of the permanent doctor and with the present Inspector be subject not only to the Compensation Board but as well to the Medical Department thereof. We cannot but feel that if this suggestion is carried out it will lead to a much more extended medical survey, with greater first aid assistance than now exists or is possible under present arrangements, which must and will very materially result in a further reduction of the costs of administration, especially in respect to medical and hospital fees.

Further, in order to help the Board in the discharge of its duties, we recommend that all scalers of logs and pulpwood, whether employed upon Crown Lands or upon private property, be compelled to report to the Board the names of all contractors and sub-contractors upon whose operations they may be engaged in scaling, together with the number of men employed and the place where the respective operations are being carried on. For failure to make such a report the scaler offending to be subject to such penalty as the Lieutenant-Governor in Council may approve.

4. *Estimated Payroll.*—When any estimate or payroll submitted by an employer under Part 1 is less than one thousand dollars, such payroll shall for assessment purposes be considered and assessed as one thousand dollars. Provided, however, that if any employer submits more than one estimate or payroll in any one year for an industry or portion of an industry, the sum total of such estimates or payrolls shall be considered in the assessing of any subsequent estimate or payroll.

5. *Application for Compensation.*—Whereas Section 16 of the Act provides that no compensation shall be payable under Part 1 in respect of any injury unless application for such compensation is made within one year after the occurrence of the injury, we beg to recommend that the same be amended so as to read within six months instead of one year after the occurrence of the injury.

6. *Co-operation.*—During this investigation it was pointed out to us that there was an opportunity for improvement in matters arising under the Act if there was or could be effected some co-operation or more distinct co-operation between the Compensation Board and the Lumbermen's Safety Association. The

latter body has been in existence for some years and the purpose of its creation was to suggest or try and effect some means whereby the expense of the Compensation Act might be kept under control so far as the lumber industry was concerned. It has striven to bring this about by means of education in the line of literature and coloured posters which are mailed at regular intervals to saw-mills and logging operations and printed in both the English and French languages. We suggest that more cordial relations between these two bodies should exist, and we recommend that the Workmen's Compensation Board and the Lumbermen's Safety Association should arrange to meet in conference at least quarterly and discuss problems pertinent to the lumber industry with a view to effecting the desired relief.

7. *Adjusting Assessments.*—In this respect we suggest that subsection 2 of section 66 of the Act be repealed and a new section be substituted to read as follows:—

> "In computing and adjusting the amount of the payroll of any industry, regard shall be had only to such portion of the payroll as represents workmen and work within the scope of this part, and where the wages of any workman exceeds fifteen hundred dollars per year, the excess shall be deducted from the amount of the payrolls and the assessment shall be based on the amount of it as so reduced."

Also, for the more complete working out of the Act we consider it advisable that an amendment should be made to Section 68, which relates to the enforcement and collection of assessments in cases of default of the employers, in order to remove difficulties that may arise and to settle the question of the right and authority of the Board in such cases. We suggest the following amendment to this section:—

> "Where a person other than the employer has an interest in the property, real, personal or mixed, upon which a lien has attached under the provisions of section 65 (1) the said property shall, for the purpose of enforcing such judgment, be deemed the property of the employer only."

SUMMARY

The result of our investigation is that we made the following recommendations:—

1. The adoption of a complete set of rules and regulations for the prevention of accidents as set out and described in Section 1 of the Report.

2. The establishment of better and more effective means for first aid relief, referred to in Section 2 of the Report.

3. Attention to the administration of the Act as outlined in paragraph 3 of the Report.

4. A change in the estimating of payrolls as indicated in paragraph 4 of the Report.

5. An amendment to the Act in respect to applications for compensation as outlined in paragraph 5 of the Report.

6. Co-operation between the Workmen's Compensation Board and the Lumbermen's Safety Association as referred to in paragraph 6.

7. An amendment to section 66 of the Act in regard to the computing and adjusting of payrolls.

8. An amendment to section 68 of the Act to remove doubts and establish the right and authority of the Board in cases of default by employers in paying the assessments levied upon them.

In concluding this report we desire to express our thanks to the officers of the Compensation Board and all others who appeared before us, for the courtesy and help they extended during the course of the investigation.

The City Council of Winnipeg has adopted the principle that all printing contracts entered into by the municipality must contain a "fair wages" clause setting forth that 90 cents an hour must be the minimum rate of wages payable to the printers employed under such contracts.

The Dominion has paid the sum of $1,500 to indemnify the carpenters, about thirty in number, for the loss they sustained early in 1925 in the destruction of their tools by a fire in one of the warehouses at the dockyards at Esquimalt, B.C. The Victoria Trades and Labour Council took the matter up with the government at Ottawa without regard to the fact that the majority of the men affected were non-union carpenters.

A co-operative livestock marketing organization, to be known as the Manitoba Co-operative Livestock Producers Limited, is to be organized on a province-wide scale, with a uniform contract. A decision to this effect was reached at a meeting of livestock producers held at Winnipeg in April.

The Hon. J. A. Cross has been appointed administrator of the Saskatchewan Child Welfare Act, commencing on May 1, 1927. Some of the provisions of this consolidating act were outlined in the last issue of the LABOUR GAZETTE, page 384.

WORKMEN'S COMPENSATION IN NOVA SCOTIA AND BRITISH COLUMBIA DURING TEN YEARS

Nova Scotia

THE annual report of the Workmen's Compensation Board of Nova Scotia for the year 1926 describes the work carried on during the tenth year of the operation of the Act, which became effective on January 1, 1917.

During the past ten years accidents to the number of 66,572, in the industries within the jurisdiction of the Board, were reported. During that time 897 workmen were killed. The amount actually paid to workmen or their dependants was $5,277,605.16, and the amount, at the end of 1926, required for the purpose of paying life and other pensions and compensation to disabled workmen, was $4,745,669.88. The total compensation paid or payable to workmen and their dependants for the ten years amounts to $9,973,275.04. That amount does not represent the entire cost of the accidents for the ten-year period, as the administration expense is not included. There were 501 widows awarded pensions for life or until remarriage; 1,189 children under 16 years of age were awarded monthly pensions, while under that age; dependent mothers and fathers to the number of 223 were awarded compensation; 26 members of the family, other than widows, children and parents, more or less dependent upon workmen who had been killed, received benefits; and life pensions were awarded to 2,375 workmen who were disabled, wholly or partially, for life.

Prior to January 1, 1920, medical aid was not furnished except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the seven years that have elapsed the amount of $387,017.40 was paid for such purpose.

Industrial Conditions in 1926

The report states the total amount of the wages paid out in the province during 1926 and in previous years, using these figures as a basis on which to estimate the condition of industry. This comparison reveals an increase of about 10 per cent in the payroll in 1926 as compared with 1925. The totals for the past ten years were as follows: 1926, $44,836,413; 1925, $40,560,428; 1924, $46,743,472; 1923, $54,678,604; 1922, $47,159,622; 1921, $60,970,120; 1920, $74,600,999; 1919, $60,017,418; 1918, $51,108,492; 1917, $39,326,243.

40737—3½

Value of Compensation

The actual payments for compensation and medical aid in 1926 amounted to $777,829.90. Of this amount $484,483.40 was paid to workmen other than pensioners, and $293,346.50 was paid to those entitled to pensions. During the past year 5,150 workmen, wholly disabled for seven days and upwards, were paid compensation for the period of disability. At the end of the year the persons receiving compensation in the form of a monthly pension were as follows:—

Widows	390
Children under 16	845
Dependent mothers	67
Dependent fathers	41
Workmen disabled for life (partially or wholly)	623

Accidents

The year 1926 was marked by a disaster to the fishing fleet in August, when two fishing vessels were lost in a hurricane near Sable Island with all the members of both crews, numbering 25 men for each vessel. This was the worst disaster that had occurred in the industries under the act since the coal mine explosions in July, 1917, and January, 1918. The same hurricane was the cause of injuries to fishermen on other vessels. Both vessels were under Part 1 of the Act, and the amount estimated to provide compensation to the dependents of the fishermen who were lost amounted to $167,000.

In all, 107 fatal and 7,089 other accidents were reported during last year, the total number of all accidents exceeding by 1,426 the corresponding total for 1925. The increase was due to accidents in shipping and navigation, mining and lumbering. On the other hand there was a decrease in the amount paid in respect to accidents in general manufacturing, iron and steel, building and construction and some other classes.

The nature and severity of the accidents compensated during the ten years of the operation of the act are shown as follows:—

Fatals, compensable	897
Permanent partial disability	2,375
Temporary total disability	46,751
Medical aid only	5,523
Total compensable claims	55,546
Pending adjustment	170
Fatals not compensable (1921-1926 inclusive)	29
Other non-compensable accidents (fatals included for 1917-1920)	10,827
Total	66,572

Medical Aid

The Act provides for thirty days medical aid following the date of disability. The estimated cost of providing medical aid in 1926 amounted to $80,059, compared with $66,193 in 1925. The ratio of the cost of medical aid to the compensation cost of accidents in those classes in which the Board paid medical aid for 1925 and 1926 as follows:—

	1925	1926
Lumbering, sawmills, etc.	16.5	15.4
General manufacturing	11.	20.1
Building and construction	9.4	11.3
Public utilities	10.7	6.7
Transportation	16.2	10.6

The ratio has not been given in the Mining and Iron and Steel classes, as the greater portion of medical aid in connection with those classes is furnished under medical aid schemes adopted by the workmen, and consequently is not furnished by the Board. In the Navigation class medical aid is as a rule furnished under the Merchants' Shipping Act.

Income and Expenditure by Classes

The income and expenditure of the Board in 1926, in respect to each class of industry were as follows:—

Class	Income	Expenditure
	$ cts.	$ cts.
Mining	523,365 12	518,503 44
Lumbering and woodworking	100,838 08	188,779 35
Iron and steel	136,626 46	67,923 37
Manufacturing and operating not otherwise specified	100,938 53	41,464 30
Building and construction	130,997 81	30,443 88
Public utilities	148,366 59	45,372 75
Transportation	138,089 17	56,391 46
Shipping and navigation	72,979 37	205,852 31
Halifax Relief Commission—which is a class by itself	21 01	21 01
Dominion Government employees	43,131 72	43,131 72
Provincial Highways Department —which is in a class by itself	16,283 47	16,283 47

Administration, Etc.

The cost of administration during the year including salaries, travelling expenses, etc., was $98,740.75, in addition to which amount the sum of $332 was expended by the Nova Scotia Accident Prevention Association.

The total standing in the pension fund at the end of the year was $3,452,407, while the Disaster Reserve amounted to $746,939.

British Columbia

The tenth annual report of the Workmen's Compensation Board of British Columbia gives detailed statistics of operations under the Act during 1926. Extensive tables are given based on the records of all approved claims according to the class or sub-class of industry to which they belong; a full analysis of "finaled" temporary disability claims, with reference to the industry concerned, the wage loss involved, etc.; the average length of disability; the sex, conjugal state, nationality and average age of the workmen, and other information. A valuable table is given showing the causes of accidents, with the average cost of compensation. Analysis is made also of permanent partial disability and of temporary total disability accidents, showing the parts of the body injured, the nature of injury, average cost, etc.

Protection to Workmen

Summarizing the work of the past ten years the report states that the benefits of the act now apply to approximately 165,000 workmen and their families. During the ten years in which this legislation has been in effect, 219,670 accidents have been dealt with by the Board. As a result of those accidents 2,206 workmen lost their lives, and 4,898 others were left either partially or totally incapacitated for further work for life. Dependants of deceased workmen in substantial numbers benefit by the awards made. At the end of 1926 the pension list included the following: Widows, 631; children (under 16), 1,063; dependent mothers, 106; dependent fathers, 42; other dependents, 30; and permanently disabled workmen, 951, making in all, 2,823 beneficiaries receiving regular allowances. These figures are exclusive of injured workmen who are temporarily disabled and who receive the statutory time-loss compensation. By taking them and their dependants into consideration, as well as the dependants of permanently disabled workmen, it will be seen that over 7,500 persons are at any given time receiving the whole or a part of their maintenance from the compensation provided under the act.

The amendments of 1925 took effect in 1926, enlarging the scope of the work carried in the latter as compared with the previous years (LABOUR GAZETTE, January, 1926, page 18). Under these amendments time-loss compensation is now paid from the date of

disability in all cases where such disability is of more than fourteen days' duration. There was formerly a waiting period of three days in such cases. Provision was also made whereby an existing household might be continued, if desirable, for the benefit of the children left dependent by the death of a workman leaving no widow or in a case where the widow subsequently dies. The same monthly payment of compensation may now be made to a close relation or suitable person as would have been payable if there had been a widow. The monthly allowance to orphan children was at the same time raised from $12.50 to $15 each.

Another feature of the year was the marked increase in industrial activity, as shown by the fact that the total payrolls of the industries covered by the act were approximately $175,000,000 in the year just closed, as compared with audited payrolls of $164,216,219 for 1925, $155,410,227 for 1924, $153,548,944 for 1923, $130,592,502 for 1922, and $129,518,375 for 1921. Industrial expansion is similarily evidenced by comparing the number of firms actively operating in the province at the end of each calendar year. On December 31, 1926, there were 7,613 employing firms on the record, as compared with 7,197 at the end of 1925, 6,838 in 1924, 6,524 in 1923, 6,524 in 1922, and 6,393 in 1921. During the past year 108 employers resumed operations after periods of inactivity and 1,480 new firms commenced employing labour for the first time.

The act provides at section 5 that—

"On the application of the workmen in the case of any industry not within the scope of this Part, or on the application of the employer in the case of any industry or workman not within the scope of this Part, the Board may by order admit the industry or workman, as the case may be, as being within the scope of this Part, and upon such admission the industry or workman shall be deemed to be within the scope of this Part."

Under this provision, which was added to the act in 1919, optional protection was applied for and extended during the year to cover the workmen of 144 employers engaged in occupations not compulsorily under the act. Chief among those applying for optional protection were employers desiring to protect their farm labourers, surveyors, restaurant employees, retail clerks, and janitors, and those workmen engaged in the construction of residences who are not otherwise protected by contractors. There were 45 more employers personally availing themselves of optional protection in 1926 than in the previous year. Firms to the number of 1,316 ceased to employ labour during the year and 1,732 others commenced or resumed operations, so that there was a net increase of 416 in the total number operating.

Accidents and Claims during 1926

The report states while there has been a gradual increase in number of workmen protected under the act during the past three years, and a corresponding increase in the number of accidents reported, there has been a substantial annual decrease in the number of fatalities during the same period. Fatal accidents reported in 1926 totalled 198, as compared with 213 in 1925, 236 in 1924, and 268 in 1923. The figures for non-fatal accidents are as follows: 30,167 in 1926; 27,563 in 1925; 25,566 in 1924; and 24,184 in 1923. In addition, there were annually about 3,000 minor injuries in which first-aid men rendered the necessary service. No medical attention or time-loss compensation was expended in those cases. The accidents for 1926 averaged 2,530 per month or 107 for each working day in the year. Of a total of 30,365 accidents that were reported, 12,206 resulted in three days' time loss or less. Medical aid only was paid for in those cases. In 15,697 others both time-loss compensation and medical aid were paid. The time-loss compensation amounted to $1,452,591.52, while the medical aid attention, including specialists, hospital care, artificial appliances and drugs took $678,231.05. To settle 718 permanent total or permanent partial disability cases an additional $883,673.05 was required. Pension awards made in 1926 to dependants of deceased workmen cost $546,929.16 and funeral benefits took $16,164.41.

The lumber industry in its various branches accounted for 43 per cent of all accidents; the construction class, 10 per cent; coal-mining, 7 per cent; general manufacturing, 6 per cent; navigation and stevedoring, 5 per cent; metal-mining, 5 per cent; railroading, 5 per cent; and all other classes, 19 per cent. The fatal accidents were distributed as follows: Lumbering, 49 per cent; railroading, 13 per cent; construction, 8 per cent; metal-mining, 8 per cent; coal-mining, 7 per cent; and all other classes, 15 per cent.

The extent to which workmen rely on the compensation provided under the act to carry them across periods of lay-off due to accident is apparent from the fact that last year 770 of the 30,365 injured, or less than 5 per cent, were shown to be in receipt of any other kind of benefits. Seventy-one per cent of those who met with accidents gave their allegiance as British or Canadian, and 51 per cent of all those injured were married.

The report explains the use of the so-called reserve fund, which is sometimes criticized unfavourably through a misapprehension of the actual procedure in this matter (a note on this subject, taken from the report for 1925, was given in the LABOUR GAZETTE, October, 1926, page 962). The fund, as administered by the Board, ensures that employers commencing operations in future years are not required to bear any part of the burden of accidents which occurred in the years prior to their engaging in business.

Accident Prevention

The report pays a tribute to the work carried on by the safety committees which exist in various industries, and which "have made accident prevention work a reality." The Board co-operated in the work of these committees by supplying them with statistical information showing the causes of accidents. The experience of these committees, like that of the Board itself, leads to the conclusion that accident reduction can be secured by proper education and development of interest among the men, and by more strict supervision and watchfulness on the part of the management. Organization, and the interest it evokes, lead to the discovery of defects in equipment and succeeds in remedying them. Without organization, it is stated, the improvements already achieved would never have been accomplished. The obvious faults are soon corrected. The determination of the more obscure defects must be increasingly the duty of the safety committee backed and supported by the management.

The Board appeals for a wider use of "first aid" in industry. "By making first aid a recognized institution in every plant the injuries received will be noted and treated when they occur and before complications set in. Too often in the past the first-aid kit was not resorted to until it was too late to be of any use. Instead of considering the first-aid kit as something more or less inaccessibly locked away for the rare emergency, it should be treated as an every-day service available for every injury, however trivial it may appear at the time. The prompt 100-per-cent use of the first-aid kit would save the workmen of this Province much unnecessary suffering and yield a return of at least a hundred thousand dollars annually to the employers by way of reduction in the accident cost. From humanitarian motives the employer is anxious to protect the health and lives of his workmen. For financial reasons he should have an accurate record of every injury made at the time it happens. The man in charge of the first-aid kit can readily secure the necessary information when it is fresh in every one's mind, and he can at the same time forestall serious infection and bring the workman back to his place of duty with the minimum of lost time."

A common cause of complaint is the difficulty found by partially disabled men in obtaining suitable employment. The Board suggests that the subject of rehabilitation deserves more attention on the part of employers than it has yet received.

International Organization of Commercial Travellers

The International Federation of Associations of Commercial Travellers was founded in Paris in 1924 for the purpose of (1) bringing together the travellers and other representatives of commerce in all countries; (2) of collecting and comparing the legislative measures which relate to them, and the regulations which are applied to them, both in their own countries and in foreign countries in which they exercise their profession, and of improving their social and material conditions by combined effort to secure the reforms which are called for in such legislation and regulations; and (3) of lightening the charges and simplifying the formalities exacted by certain States from travellers and other commercial representatives.

At a congress of the International Federation, held in Vienna last September, at the instance of the Vienna Association of Commercial Travellers, organizations in the following countries were represented: Austria, Bulgaria, Czechoslovakia, France, Germany, Great Britain, Hungary, Latvia, Poland, Rumania, Serb-Croat-Slovene Kingdom, Spain and Switzerland. The organizations of commercial travellers in Europe are seldom constituted as trade unions or solely for the protection of occupational interests. It is only in Belguim, France and Great Britain that associations devoted exclusively to collective defence are to be found. Among the decisions of the Vienna congress resolutions were passed in favour of complete freedom of action for commercial travellers of all nationalities and in all countries; protection as regards licenses, taxation, etc., facilities for obtaining passports and visas; special terms for commercial travellers in connection with travel by rail or boat; special terms for hotel accommodation in all countries.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN MANITOBA

New Order Governing certain Manufacturing Industries

THE Minimum Wage Board of Manitoba issued recently Regulation No. 8 in the series of revised regulations now in course of publication (regulation No. 7 was outlined in the LABOUR GAZETTE for September 1926, page 873). The new order governs the employment of female employes in the industries of auto tops, caskets, gloves, knitting, leather goods, tents and awnings throughout the province.

The sections governing hours of labour, wages and permits of exemption, are as follows:—

Hours of Labour

(1) The hours of labour shall be not more than nine hours in any day or more than forty-eight in any week. These hours shall be so arranged that each employee shall receive one afternoon half-holiday each week. No employee shall work betwen ten p.m. and seven a.m., nor on Sundays. There shall be a period of not less than eleven hours between the close of one day's work and the beginning of the next.

(2) *Overtime.*—Overtime may be worked only on permit from the Bureau of Labour, not oftener for any employee than thirty-six days in one year. No overtime to exceed three hours in any day nor six hours in any week. No minor under seventeen years of age shall work overtime. There shall be extra pay at not less than the regular rate for all overtime worked.

(3) *Overtime Record.*—A record of all overtime worked by each employee shall be kept in a manner convenient for examination by inspectors.

(4) *Lunch Hour.*—At least one hour shall be allowed for lunch.

(5) *Delays.*—An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

Wages

(1) *Method of payment.*—Wages shall be paid weekly and after each week's wages have been earned, they shall be paid within three days.

(2) *Notice to be given.*—After four weeks' employment, one week's notice shall be required on the part of an employer in dismissing an employee, and on the part of an employee on leaving employment, except in case of flagrant insubordination on the part of an employee or flagrantly unjust treatment on the part of the employer.

(3) *Minimum Wage.*—No experienced employee of eighteen years of age or over shall be paid wages at a less rate than $12 per week.*

(4) No inexperienced employee shall be paid wages at a less rate than $8 per week for the first three months after entering the factory and $9 per week for the second three months; and $10 per week for the third three months; and $11 per week for the fourth three months, after which period of twelve months she shall be considered an experienced employee, and will be entitled to $12 per week. The number of learners shall not exceed twenty-five per cent of the total female employees.

(5) *Statutory Holidays.*—No reduction shall be made from the minimum wage for statutory holidays.

Permits of Exemption

The Board may issue a permit upon application therefor to any factory, granting modification of or exemption from these regulations. Such permits will be issued only in case of exceptional or emergent conditions arising.

The Regulation contains the usual provisions governing conditions of labour, including the subjects of cleanliness; illumination, ventilation, toilet rooms, wash basins and temperature.

Under the heading "Health and Injuries" it is provided that "All machinery and danger points shall be protected as far as possible by approved safety devices. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First Aid kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. A couch or stretcher shall be provided for emergencies and where no dressing room or similar apartment exists, a screen shall be provided.

A lunch and rest room is to be provided in factories where the employees remain for lunch.

Violations of the order are punishable by fines ranging from $25 to $100, or imprisonment from 10 days to 3 months, or by both fine and imprisonment.

*In the earlier order the rate was $12 for Winnipeg and St. Boniface and $11 for the rest of the province.

The Minimum Wage Board published during April an order amending Regulation No. 7 (LABOUR GAZETTE, September, 1926, page 873) by extending its application to "factory dressmaking establishments where dresses are manufactured in wholesale quantities." The minimum wage for experienced adult employees in this occupation is $12 per week. Order No. 7 covers the following industries: artificial flowers, bedding, ladies' wear, hats, caps, embroidery, jewelry, regalia, and garments which include all clothing trades—except custom dressmaking, millinery, custom tailoring and furriers—in all portions of the province of Manitoba.

"A STUDY ON THE MINIMUM WAGE"

THE necessity for national minimum wage standards is the main theme of a new book by J. H. Richardson, M.A., B.Sc. (Econ.), entitled "A Study on the Minimum Wage" (London: George Allen and Unwin Ltd.) Minimum wage regulation has been slow in developing, and has encountered more opposition than other kinds of labour legislation. The writer claims, however, that there is no essential difference in principle between fixing a minimum wage and fixing, for example, maximum hours of labour. "Such limitations," he says, "are among the rules regulating the conduct of industry, and a country which introduces any form of labour legislation has accepted the underlying principle involved."

So far, wage regulation has received little or no attention, notwithstanding the necessity of adequate wages if improved conditions in other directions are to have their full effect. The first minimum wage law, it is stated, was the New Zealand Industrial Conciliation and Arbitration Act of 1894, and subsequently the minimum wage principle has been widely adopted in English-speaking countries: Australia, Great Britain, the United States of America, Canada, and South Africa. Other countries have applied the principle on a small scale, namely, France, Germany, Austria, Czechoslovakia, Norway, Hungary, the Argentine Republic, and Uruguay. An examination of the minimum wage laws in force in these countries shows that in many cases only the fringe of the problem is being touched. Some laws are limited to special groups of workers, e.g., homeworkers, female workers, agricultural workers. Even in Great Britain the legislation applies to workers in a limited number of trades, and for these the minimum rates are fixed independently by separate boards. The consequence is that unwarranted differences in rates may occur. Only in New Zealand and in certain Australian States have attempts been made to grapple with the whole problem.

Mr. Richardson recommends a system of general application rather than one limited to a few trades. The chief factors in the problem are those affecting the capacity of industry to pay the legal minimum rates, and those affecting the determination of the groups of workers whose wages are thus regulated. A re-grouping is required, he thinks, involving the discarding of some traditions by which certain groups receive a lower rate than other similar groups. For example "the wages of women are often unduly low, partly on account of the limited field of labour hitherto open to them, and partly because many women have been willing to work for little remuneration as they were being maintained by the earnings of others."

An interesting chapter describes the various bases used in different countries for fixing wage rates for a particular occupation. The minimum rates are determined in relation to (1) the wages in other categories of labour; (2) the "living wage"; and (3) the capacity of industry to pay. France, Germany, and certain other European countries use the first basis. The "cost of living" base is used in New Zealand, Australia, the United States and Canada, while Great Britain takes into consideration the capacity of industry to pay, as well as the subsistence level of the employees.

Discussing the principle that the minimum wage should be a living wage, Mr. Richardson states that it is the distinctive feature of this principle that the minimum should be determined by the general productivity of the community as a whole, without taking account of the prosperity of individual establishments or industries. However, "where there are differences in the cost of living in different districts, there should be corresponding differences in money wages. If a change takes place in the purchasing power of money in any community without a change in the general productivity of goods and services, then the minimum wage should be adjusted to such changes by means of a sliding scale. This is necessary in order to ensure the maintenance of the minimum real wage." On the problem of the "capacity of industry to pay" Mr. Richardson affirms that "the general level of wages depends on total productivity, and the

principal means of increasing wages is not by fundamental changes in distribution, but by increasing productivity. An increase in general productivity will almost certainly lead to an increase in the wages of the lowest paid groups of workers. The capacity to pay of industry in general, rather than the wages which individual establishments or industries can afford, should be taken as basis for a minimum wage of general application."

Having stated the principles of the minimum wage the author finds that they point to the desirability of a national minimum wage, based on national productivity. "In each country," he says, "there should be fixed a limit below which no wage should fall. This minimum should be based on the capacity to pay of industry in general. In practice, the most satisfactory method of determining the minimum would be to fix it at a given proportion, e.g., 80 per cent of the average wage paid to unskilled workers in a number of the chief industries of the country. Since the minimum wage is to be based on the capacity to pay of industry in general, changes in the productivity of industry should be accompanied by corresponding changes in the minimum wage. These adjustments would be made by means of an index of *per capita* material production."

Mr. Richardson believes that a uniform scale for all countries is impossible of attainment. On the other hand, it may be possible for agreements to be reached by groups of nations in which economic conditions are similar, for the adoption of common standards. Such possible developments are foreshadowed to some extent by the similarity of minimum rates fixed in various States in the United States, in Australia, and in Canadian Provinces.

Separate chapters of the book deal with provisions for the worker's family (including the family allowance system); the relation between the wages of men and women; the wages of learners and juveniles; the machinery for fixing minimum wages (including trade boards, central commissions, arbitration courts, direct legal enactment, and the general application of collective agreements); and methods of enforcement. The final chapter discusses the limits of international action in regard to minimum wages.

FAMILY ALLOWANCES IN NEW ZEALAND

REGULATIONS under the Family Allowances Act passed by the Parliament of New Zealand last year were gazetted during March and the Act became effective on April 1. A note on this Act was given in the LABOUR GAZETTE, September, 1926, page 849. Further particulars are given in the New Zealand Official Year-Book, 1926, as follows:—

The Family Allowances Act was passed in the session of 1926, to provide for the granting of allowances towards the maintenance of children by parents of limited income. The allowance is at the rate of 2 shillings per week for each child in excess of two, the average weekly income of the applicant and his wife and children, including allowance, not to exceed four pounds, plus two shillings for each child in excess of two. For the purposes of the Act the term "child" means a child under the age of fifteen, being a son, daughter, stepson, or stepdaughter of the applicant and includes a child legally adopted by the applicant or his wife, but not an illegitimate child. A child who is not in fact maintained as a member of the family, or in respect of whom a pension out of public moneys is otherwise payable, is also excluded. In certain cases the allowance may be continued after a child has attained the age of fifteen. The application for the allowance is to be made by the father, but in general the allowance is to be paid to the mother, provision being made for payment to the father in certain exceptional cases.

Apart from the conditions as to income and children, the applicant and (except in cases where the allowance is not payable to the wife) his wife must have been resident in New Zealand for not less than one year, and the children in respect of whom the allowance is payable must either have been born in the Dominion or have been resident therein for one year. Except with the direction of the minister in charge of the pensions department, no allowance may be paid in the case of aliens or of Asiatics, whether British subjects or not. An application for an allowance may be refused if the applicant or his wife is of notoriously bad character, or has been guilty of any offence or misconduct dishonouring him or her in the public estimation. Refusal may also be made if the applicant or his wife has directly or indirectly deprived himself or herself of property or income in order to obtain the benefits of the scheme. The allowance is required to be applied toward the maintenance or education of the children concerned, and may be refused unless it is shown that it will be so applied.

Under the regulations just published every allowance authorized by the Commissioner will be for the period of one year, and will commence on the first day of the month in which the application was lodged. In respect of each allowance authorized there will be issued an identity certificate which will set out particulars of the grant and the place of payment. The allowance will be paid at post offices monthly, and every receipt given by the payee will include a statement that all the children in respect of whom the allowance is granted remain under his care and control. For the purposes of ascertaining whether an allowance is to be continued, or whether the amount of any allowance should be altered, the Commissioner may require at the close of any income year, or at any other time, a statement from the parents of the children regarding their income and property, and the number of their children under fifteen years of age.

INDUSTRIAL CONDITIONS IN CANADA AND THE UNITED STATES

Report of Delegation appointed by British Government

THE delegation sent by the British Government in the fall of 1926 to investigate industrial conditions and relations in Canada and the United States recently presented their report to the British Minister of Labour. The delegation consisted of seven members. Sir William Mackenzie, K.C., the chairman, was president of the Industrial Court of Arbitration from 1919 to 1926, and chairman of the Railway National Wages Board from 1920 to 1925. The others were Mr. Ernest Bevin, general secretary of the Transport and General Workers' Union, and a member of the general council of the Trade Union Congress; Mr. J. Kaylor, member of the executive council of the Amalgamated Engineering Union; Mr. M. B. Dewar, managing director of the Metropolitan Carriage, Wagon and Finance Company; and Mr. C. Randolph Smith, a director of the shipbuilding firm of Barclay, Curle and Company; and Messrs. F. W. Leggett and I. Haig Mitchell, both of the ministry of Labour.

The delegates were unanimous in their report, some reservations however being made by Mr. Mitchell in connection with certain observations made in the report on commercial and business methods in the countries visited. The itinerary of the commission in Canada included Ottawa, and the principal manufacturing centres of Quebec, Ontario, Nova Scotia and New Brunswick. In the United States they visited Washington and studied industrial conditions throughout the States of the east and middle west.

The commissioners in a covering letter addressed to the minister, mentioned six features in American industry that had specially interested them. These features are as follows:—

i. *Industrial combination.*—The formation of large groups in industry is very marked, and they are almost entirely of the type generally referred to as "horizontal trusts." Where well organised, their success is undeniable. They have caused cheaper production and lower selling prices, and this has resulted in widened markets, greater employment, and higher wages. Large amalgamations of similar industries are no more difficult to control than small units, and the advantages are that overhead charges are lessened, selling expenses are reduced, and individual factories can be specialised on the production of fewer varieties of articles, again causing cheaper production.

ii. *Standardization and simplification.*—The effect of intelligent standardization is to reduce the cost of manufacture, to reduce stocks which have to be carried both by a manufacturer and a dealer, and to make the financing of stocks easier by reducing the risk of depreciation due to changing fashion or type. This process has undoubtedly been made easier in the United States than is at present possible in Great Britain, by the lack of conservatism and by the power of the large combinations of industry. In addition to standardization, simplification of design so that parts of any commodity can be more cheaply and easily manufactured is the subject of continual study. An appendix on "Simplified Practice," as recommended by the United States Department of Commerce, shows that much has already been accomplished in this direction.

iii.—*Instalment buying.*—The estimated total value of goods sold at retail in the United States in 1926 under this system exceeded £1,200,000,000 (this sum is considerably more than the value of the total British export trade in a normal year). The estimated instalment debt at a given time is about £550,000,000. It is true that the greatest caution is necessary in approaching this matter, but the system of instalment buying must have been a great factor in increasing the internal trade of the country and consequently the prosperity of industry.

iv.—*Management.*—Management is receiving clearer recognition as the executive arm of industry, distinct from ownership, not only in large corporations where ownership is widely distributed but also in small undertakings. The technique of management has greatly advanced. Managers pool among themselves, even in competitive industries, the benefits of their experience in production, organization, marketing and industrial relations, and full publicity is given to statistical and other data on all business matters.

v.—*Labour.*—The workpeople accept experiments towards reduced cost of production, as they have always found that the result of lower costs has been increased consumption and consequently more employment.

Various forms of incentive are arranged to maintain a high standard of output.

Management is ready to recognize the ability of individual workers by paying higher wages for higher output, and in many cases by grading them according to their skill.

The sole qualification for employment is ability to do the work, and little regard is paid to training and past experience if adaptability is shown.

Appointments to executive and administrative posts are determined by ability, and this position arouses keen individual effort and has a marked effect on the morale of the workshop.

The adaptability shown by all engaged in industry to promote efficiency and productivity and to eliminate waste, in order to secure the greatest benefits which industry can afford, is particularly noticeable.

vi.—*Industrial Relations.*—During recent years there has been a greater realization of the importance of industrial relations. Organized labour is adapting its organization to meet changed conditions. In those industries in which the majority of the workers are members of unions, the unions have made arrangements for general questions affecting the members of several unions to be discussed between the management and representatives of a federal system of all the unions concerned.

The movement towards closer contact in the workshop between the management and workpeople, the enlistment of trade unions and individual workers in the problems of organization and production, and the exchange of information regarding costs of production and the state of business are important contributions to the association of management and labour.

It is the spirit that animates the workshop that matters. As in Great Britain there are in America many systems of machinery for negotiation between management and labour in operation. The outstanding feature which distinguishes the most successful American schemes is the greater provision made for management and workpeople at individual plants jointly to deal with their own individual difficulties, while providing for the common rules of each industry to be settled by other means.

General Characteristics

The report dwells on the widely different conditions of life on the American continent as compared with Great Britain. Differences moreover in the general background of national life have been carried further in the United States during the period of rapid development since 1922. Since that year the manufacturers, for the most part supported and assisted by the workers, have concentrated on an acceleration of output and a lowering of production costs. One of the chief factors in the promotion of large scale production has been the remarkable development in electric power in both countries in recent years.

A table, taken from official sources, is given to show the increase in productivity in the United States industry in the last few years. Taking productivity per worker in 1914 as 100 the index numbers for ten industries in 1925 were as follows:—

Iron and steel	149
Automobiles	310
Boots and shoes	116
Paper and pulp	125
Cement	157
Leather	128
Flour milling	139
Cane sugar refining	127
Slaughtering and meat packing	110
Petroleum refining	177

The American unlike the British workman now accepts the introduction of new machinery without question. The wider internal markets that have been obtained on this continent by means of mass production and standardization and by the plan of instalment buying have had the result that "the fear of unemployment seems to be less in America than in England; this has a corresponding psychological effect on the workman. In general there is greater mobility of labour than is the case in Great Britain."

Industrial Relations

Part II. of the Report deals with industrial relations. Trade unionism is strongest in the United States in the manufacturing, mining, and transport industries. An examination of

the statistics available shows that in these industries about 25 per cent of the employees are members of trade unions, as compared with about 44 per cent in Great Britain.

A very interesting phase in the development of trade unionism in the United States, it is mentioned, is the extent to which certain unions have entered into the technique of business. In the clothing trades for example, the Amalgamated Clothing Workers' Union of America has established a research organization by means of which they are fully cognizant of all aspects of the industry, including its commercial side, and are in a position to advise employers.

Organized labour has formed banks which have become ordinary banking institutions. The total number of labour banks operating on June 30, 1926, was 36, with a total capital of $9,366,600; total deposits of $108,584,597; total reserves of $126,849,318; and $3,799,422 surplus and profits. Organized labour has accepted "the machine age" as an inevitable development of modern industry. It is believed that management and labour are both dependent upon industry and that both can make use of capital for their joint advantage. The organized labour movement attaches the utmost importance to the efficiency of management and to the efficiency of the workman so that he can develop the maximum of productivity without overworking or overexertion and thus justify his standard of living.

Controversy, the Report shows, has ranged round the principle of the "closed shop" but certain unions are opposed to it. A remarkable example is quoted of the Brotherhood of Locomotive Engineers. This union, it is stated, takes the view that "it is for the union to possess such advantages as to attract voluntary members and that it is hampering to union discipline if the suspension of a member from membership is equivalent to denying him work in his normal occupation." This union has also a rule against engaging in sympathetic strikes, and its members will work with substitutes for other grades in dispute with the railway company, providing those substitutes are competent. The ground of this policy is that their first duty is to keep the contracts they have made.

Association of management and labour in the plant. The report refers to the development of shop representation schemes as a means of giving self-expression to labour and enlisting labour's co-operation with management. Many of the American plans, it is remarked, are supplemented by schemes for stock ownership, profit-sharing, house purchase, medical attention, mutual benefit societies, and forms of welfare work. By these means the management attempt to secure the interest of the employees in the company as their joint concern, to strengthen the bonds which connect the employees and the company and so to reduce the annual labour turnover.

Earnings of Labour

As regards the level of earnings, the delegation found in general in the industrial centres of the north that the weekly earnings of a labourer range from $20 to $25 a week; of a semi-skilled worker from $25 to $30 a week; and of skilled workers from $30 to $60 a week, and upwards. The best paid industrial workers are engaged on the railroads, in building, printing, and anthracite coal-mining. Highly skilled men are much in demand, and there is a growing shortage of this class of worker which tends to keep up the level of earnings. In an extensive appendix, average earnings in the various industries are given in detail. Exceptionally high rates are given as prevailing in the building trades last autumn in cities like New York, Philadelphia, and Denver. In New York, bricklayers, plasterers and stonemasons had an hourly wage rate of $1.75, but bricklayers in Columbia received only a dollar an hour. Engineering rates, on the other hand, were much lower, and the average annual earnings of automobile workers in Detroit were $1,640 for skilled, and $1,200 for unskilled.

In estimating the relative positions of workers in the United States and Great Britain, the Report submits, there are several important considerations to be borne in mind. There is nothing in the United States to compare with the state provision in Great Britain for unemployment, sickness, and old age. In general an unemployed worker has to depend upon his savings when not able to work. At the same time, attention is being given by individual managements to welfare work and to the regularization of employment. There is no doubt, however, that in the United States the worker is in a less favourable position in regard to the risks of industry than in Great Britain. The cost of living, it is also pointed out, particularly in the matter of house rents and clothing, is higher than in Great Britain. The average percentage increase in the cost of living for 1926 in the United States was 75.5 over 1914, but the average earnings in nearly all cases increased by at least 100 per cent in the same period. The payment of higher real wages during a period of prosperity has

resulted in a considerable accumulation of savings out of wages, and this is shown by an increase in deposits in the banks, by the amount of stock held by employees, by the purchase of homes, and by the increase in life insurance. A skilled worker expects to have his house fitted with central heating and a household is in many cases not considered complete without an automobile, a wireless set, an electric washer, and other electric domestic equipment.

The grading and promotion of workers, it is noted, is a special feature of American industry, the only test being the capacity to do the job, without regard to previous training or history.

For wages and hours of labour in Canada the report relies upon the report on this subject published by the Department of Labour as a supplement to the LABOUR GAZETTE, January, 1927.

Hours of Work

There is considerable variation, the Delegation states, in the number of hours worked as between different establishments in the same industry or in the same district. In the large establishments in the North and in trades covered by union agreements the weekly hours are usually 44 to 48. Many plants work 50, 55, and 60 hours a week, both on day and night shifts. Women in certain states work at night the same hours as the men. In one establishment a night shift of 62½ hours per week was found. The hours in the South usually range from 50 to 60 per week. The average for the United States is a little over 50 hours per week. While additional payment is often made for overtime work, this is not general, and it is usual for no extra payment to be made for night work. Many workers prefer night work, as the longer hours enable higher earnings to be made. Consideration is being given to the question of the length of the working week, and a five days' week appears to be a growing practice in preference to the Saturday half-day, which is not yet general, but is extending.

Notwithstanding the general level of prosperity since the depression in 1921, the United States has not been free from industrial disputes. Statistics which are described as incomplete are given in an appendix and show that there were 3,630 disputes in 1919, 1,249 in 1924, and 1,301 in 1925. Figures relating to 1925 reveal that 428,218 workers were involved in 1,012 disputes, the average number per dispute being 423. Stoppages of work in consequence of demarcation disputes, it is noted, rarely occur. It is the practice of nearly all unions not to allow their members to cease work pending settlement of a question of demarcation. It is not unusual for the employer to determine which craft should perform the work pending adjustment of the matter between the unions. The fact that a stoppage of work is avoided means, of course, that employers are able to make contracts without fear of interruption owing to disputes between unions and there is no loss of wages to the men.

Conditions in Canada

The last section of the report deals with Canada, where the delegates found industrial conditions similar to those in the United States, with however some special characteristics peculiar to itself. Canada, it is pointed out, is primarily an agricultural country, but each year it is gaining greater importance industrially. Between 1900 and 1925, the aggregate annual trade represented by exports of Canadian merchandise and imports for domestic consumption rose from 342 million dollars to 1,878 million dollars, an increase of nearly 550 per cent. Allowance must, of course, be made for the general rise in prices in that period, but even so, the actual volume of foreign purchases and sales has grown rapidly. Canada to-day is the largest *per capita* exporting country in the world.

The report mentions, in the section dealing with industrial relations in Canada the co-operative plan of management in the shops of the Canadian National Railways. The visitors were much impressed with the good results already obtained, both in increased efficiency and in satisfaction to the employees.

An account is given in the report of the large body of "social legislation" existing in Canada, including the provision for the conciliation and arbitration of industrial disputes, payment of fair wages in government contracts, workmen's compensation, minimum wages, etc.

At the recent session of the British Columbia legislature representatives of the coal miners on Vancouver Island made several suggestions before the committee investigating the operation of the Workmen's Compensation Act. Among other suggestions they proposed that provision should be made in the act for the payment of compensation to sufferers from occupational diseases of the eye, caused through conditions peculiar to the nature of work in the mines, and that the parents of an unmarried man without dependants should be awarded $1,000 as compensation in the event of the accidental death of their son while engaged at his work.

NOTES ON LABOUR UNION ACTIVITIES

International Brotherhood of Paper Makers

THE eleventh convention of the International Brotherhood of Paper Makers was held at Albany, N.Y., March 1-5, 1927, with approximately fifty delegates present. A short review of the activities of the organization was presented by President W. R. Smith, who stated that "in the short period of twenty-six years, conditions in the paper mills of this continent had been raised to a level that would compare quite favourably with the best to be found in any industry anywhere, when consideration is given to the fact that the very nature of our industry makes night work necessary. Our wage rate, more especially in the news end of the industry, while it is not yet all that could be desired or adequate for the skill required, still, with but few exceptions, will measure up to the standard of any other trade in America, notwithstanding the fact that we have less than ten per cent of our possible membership organized".

According to figures quoted by the president, $65,000 had been paid out in death benefits by the international union since October 1, 1911, while $300,000 had been expended for strike and defense purposes. The delegates were informed that there were over thirty trade agreements (verbal or written) with employers, most of whom were among the largest paper manufacturers in the world.

Some of the constitutional amendments adopted were as follows: (1) Increasing the *per capita* tax from ninety cents to one dollar; (2) Increasing the international secretary's salary from $3,000 to $4,000 and the treasurer's salary from $250 to $500 per year; (3) Adding New Year's Day to the list of legal holidays; (4) Providing for two vice-presidents to be stationed in Canada.

Among the resolutions adopted by the convention were the following:

(1) Instructing the executive board to appoint a French speaking organizer for the Province of Quebec;

(2) Favouring the five-day week in all paper mills;

(3) Recommending that the executive officers ascertain through an actuary the amount of *per capita* required to increase the death benefit to $500;

(4) Endorsing the efforts of the Trades and Labour Congress of Canada to have union labels, buttons and badges, etc., duly registered;*

(5) Instructing the executive board to take up with the proper officials of the International Brotherhood of Electrical Workers the question of securing jurisdiction over electricians operating electrically driven paper machines.

The chief officers are: President, W. R. Smith, Albany, N.Y.; Treasurer, Archie Hook, Chicago, Ill.; Treasurer, Matthew Burns, 25 S. Hawk St., Albany, N.Y.; Arthur D'Aoust, 50 Bridge St., Hull, Que., and A. F. McLeod, Espanola, Ont., are the two vice-presidents resident in Canada.

Amalgamated Association of Iron, Steel and Tin Workers

The fifty-second annual convention of the Amalgamated Association of Iron, Steel and Tin Workers, was held in the Washington Theatre, Granite City, Ill., commencing April 5, 1927, with President M. F. Tighe presiding. The reports of the international officers were adopted as presented.

One of the constitutional amendments adopted by the convention provided for the levying of a fine of $50, or suspension from the association, of any member who rooms, boards, harbours or assists any person who takes the place of any legalized striker.

Among the resolutions adopted were:

(1) Protesting against the enactment of any exceptional legislation against foreign-born workers;

(2) Calling upon affiliated lodges to form organizations for the purpose of fighting all bills to harass the foreign-born workers;

(3) Recommending that efforts be made to have workers belonging to company unions become members of the association;

(4) Favouring the woman's eight-hour bill then before the Illinois Legislature;

(5) Expressing faith in the innocence of Sacco and Vanzetti and instructing the secretary to immediately communicate with the Governor of Massachusetts requesting him to use his legal power to unconditionally free the two men.

Middletown, Ohio, was selected as the convention city for 1928.

National Marine Engineers' Beneficial Association

The fifty-second annual convention of the National Marine Engineers' Beneficial Association was held at the Franklin Square Hotel, Washington, D.C., February 14-18, 1927, with about forty delegates present. President Yates submitted a summary of the outstand-

* An act to enable trade unions to register their labels was passed at the recent session of Parliament (LABOUR GAZETTE, April, 1927, page 378).

ing events of the past year, including those subjects which might require action by the convention. The report of secretary-treasurer A. L. Jones showed the association to be in a strong financial position and having a total membership of 8,247.

Among the resolutions adopted were the following:

(1) Instructing the national president and national executive council to send an organizer to the Great Lakes District for the purpose of stimulating organization activity and increasing the membership in this section;

(2) Urging the national president and national executive council to see that the necessary legislation is introduced into the Senate to have motor vessels inspected by the United States Steamboat Inspection Service and that these vessels be manned by duly licensed engineers;

(3) Instructing the national president to draft a suitable letter advising sub-associations that the United States Shipping Board's wage scale is the universal and minimum wage scale aboard ship;

(4) Asking for a continuance of the appropriation of $1,000 for the partial maintenance of the office of river business manager.

The National Officers are: President, William F. Yates, 313 Machinists Bldg., Washington, D.C.; First vice-president, D. W. Miller, Seattle, Wash:; Second vice-president, W. H. Hyman, Baltimore, Md.; Third vice-president, George Harrison, Galveston, Texas; Secretary-Treasurer, A. L. Jones, 313 Machinists Bldg., Washington, D.C.

Unions may not Boycott Firms in United States

Seven out of nine of the United States Supreme Court judges last month handed down a decision that strikes of working people against the handling of "unfair" materials are illegal. The suit was brought by the Bedford Cut Stone Company and 23 other companies engaged in quarrying and fabricating limestone in the Bedford-Bloomington district of Indiana on the ground that members of the Journeymen Stonecutters' Association had refused to finish stone "cut by men working in opposition to" the association, thereby violating the anti-trust laws. President Wm. Green of the American Federation of Labour, in commenting on the Supreme Court decision, said: "The application of the Sherman anti-trust law by the court to labour and labour organizations, as thus interpreted by the Supreme Court, renders the condition of working people at the point where it approximates involuntary servitude. Labour must be made free and permitted to exercise its perfect freedom in the disposition of its labour power. Compulsion in either giving or withholding service is contrary to the ideals of American citizenship and the trade union movement."

In commemoration of Confederation of the Dominion of Canada the Machinists' Monthly Journal plans to make the June issue a special Canadian number, which will be of particular interest to members in the Dominion. It is also intimated that the June issue of all official publications of the railroad organization will also feature the Diamond Jubilee of Confederation.

TRADE DISPUTES AND TRADE UNIONS BILL IN BRITISH PARLIAMENT

SOME of the provisions of the Trade Disputes and Trade Unions Bill, 1927, which was introduced by the Government in the British House of Commons on April 4, were noted in the last issue (page 352). A fuller summary of the provisions of the bill is as follows:—

Clause 1 of the Bill declares that any strike having any object besides the furtherance of a trade dispute within the trade or industry in which the strikers are engaged is an illegal strike if it is a strike designed or calculated to coerce the Government, or to intimidate the community or any substantial portion of the community. The provisions of the Trade Disputes Act, 1906, and of the second proviso to Section 2 (1) of the Emergency Powers Act, 1920, are not to apply to any act done in contemplation or furtherance of such a strike.

Clause 2 provides that any person refusing to take part in an illegal strike shall not be subject to expulsion from any trade union or society, or to any fine or penalty, or to deprivation of any right or benefit to which he would otherwise be entitled, nor is he to be liable to be placed in any respect either directly or indirectly under any disability or at any disadvantage as compared with other members of the union or society. This clause is made retrospective as respects any strike which is declared by the Bill to have been illegal.

Clause 3 provides that it shall be unlawful

for one or more persons to attend at or near a house or place where a person resides or works or happens to be, for the purpose of obtaining or communicating information or of persuading or inducing any person to work or to abstain from working, if they so attend in such numbers or otherwise in such manner as to be calculated to intimidate any person in that house or place, or to obstruct the approach thereto or egress therefrom, or to lead to a breach of the peace. "To intimidate" is defined as meaning "to cause in the mind of a person a reasonable apprehension of injury to him or to any member of his family, or of violence or damage to any person or property"; "injury" includes injury other than physical or material injury; and "apprehension of injury" includes an apprehension of boycott, or loss of any kind, or of exposure to hatred, ridicule, or contempt.

Clause 4 deals with the political funds of trade unions, and provides that it shall not be lawful to require any member of a trade union to contribute to the political fund of a union unless he has given notice, in a prescribed form, of his willingness to contribute thereto.

Clause 5 provides that regulations as to the conditions of service of established civil servants shall include regulations prohibiting such servants from belonging to organizations affiliated to outside organizations or federations thereof, or having political objects.

Subsection (1) of Clause 6 makes it unlawful for a local or other public authority to make membership or non-membership of a trade union a condition of employment, or to discriminate in any way against their employees who are members or non-members of a union; and subsection (2) makes it an offence punishable by fine or imprisonment if any person employed by a local or other public authority wilfully breaks a contract of service with that authority, knowing or having reasonable cause to believe that the probable consequence of his so doing, either alone or in combination with others, will be to hinder or prevent the discharge of the functions of the authority.

Clause 7 empowers the Attorney-General to apply for an injunction to restrain any application of the funds of a trade union in contravention of the Act.

FASCIST "CHARTER OF LABOUR" FOR ITALY

THE Fascist "Charter of Labour" for Italy, embodying the fundamental principles of the Fascist-Syndicalist State, which is based primarily upon the theory of replacing the class struggle by co-operation between capital and labour under direct state control, was promulgated on April 21, by Premier Mussolini at a special meeting of the Fascist Grand Council. The ceremony of presentation of the document came as the climax of a joint celebration of the Fascist Labour Day and the founding of Rome 2,681 years ago.

The underlying idea of the "Charter of Labour" is the State's undisputed right directly to control all forces of production, acting as the guardian both of capital and labour, establishing equality of rights and duties between them, compelling them to carry out their tasks for the common good, punishing infractions and maintaining peace between them at any cost. To this end the document, which will be the basis of further legislation, defines the roles of labour and capital, enunciates the minimum guarantees of existence to which they will be entitled. The State, however, retains a free hand as the agent of the nation, which is an organism superior to all single individuals with moral, political and economic unity.

Preceding the thirty articles of the charter is a preamble asserting that labour and property are both under the guardianship of the State, since the State must control the whole body of production for the well-being of its citizens and the development of national strength. In order to accomplish this end capital and labour, under the charter, are organized in legally recognized units called associations or syndicates, all relations between them being carried out through collective contracts. Other units, called corporations, acting as the direct agents of the State, control these activities, while specially-created labour courts act as the court of last resort in cases of controversies. Non-Fascist associations of labourers and employers will be permitted to exist, but without power, while their members will be obliged to carry out the collective contracts made with Fascist associations within their categories of activity.

Text of the Charter

The following is the text of the "Charter of Labour".

Article I.—The Italian nation is an organism having ends in life and means of action superior in power to those of the single individuals occupying and forming it. It is a moral,

political, and economic unity, which has its historic realization in the Fascist State.

Article II.—Labour in all forms, intellectual, technical and manual, is a social duty. In this sense and only in this sense is it under the guardianship of the State. The whole body of production is a single unit from the national point of view; its objects are unitarian, and are summed up in the well-being of the producers and the development of the national strength.

Article III.—Professional or syndical organization is free. But only the syndicate legally recognized and under the control of the State has the right legally to represent the entire category of employers or workers for which it is constituted, to protect its interest as regards the State and other professional associations, to stipulate collective contracts of labour binding upon all persons belonging to the category, to exact contributions from them, to carry out in relation to them the functions of a delegate of the public interest.

Article IV.—In collective labour the contract finds its concrete expression of solidarity between the various factors of production through the conciliation of the opposing interests of employers and workers and their subordination to the superior interests of production.

Article V.—The Magistrature of Labour is the organ whereby the State intervenes to regulate labour controversies, whether with reference to the observance of pacts or other existing regulations or with reference to the determination of new labour conditions.

Article VI.—This article legally recognizes professional associations to assure the juridical equality of employers and workers, to maintain discipline in production and labour. The corporations constitute unitarian organizations of the forces of production and integrally represent their interest. In view of this integral representation, the interests of production being national interests, the corporations are legally recognized as State organs.

Article VII.—The Corporative State considers private initiative in the field of production is the most efficacious and most useful instrument in the interests of the nation. Privately organized production being, like private property and capital, a function of national interest, the organizer of a company or undertaking is responsible towards the State for its production. Collaboration between the productive forces entails reciprocal rights and duties between them. The assistant technician, employee, or workman is an active collaborator in the second undertaking, the direction of which lies in the hands of the employer who has the responsibility for it.

Article VIII.—Professional associations of employers are obliged to promote in every way possible an increase in production and a reduction in costs.

Article IX.—Intervention by the State in economic production occurs only when private initiative is lacking or is insufficient, or when the political interests of the State are involved. Such intervention can assume the form of control, assistance, or direct management.

Article X.—In collective controversies with labour juridical action cannot be begun until the corporative organ has tried conciliation. In individual controversies concerning the interpretation, application, or collection of labour contracts professional associations have a right to intervene for conciliation. Competence in such controversies devolves upon the ordinary magistrature, with the addition of assessors named by the interested professional associations.

Article XI.—Professional associations are obliged to regulate through collective contracts the relations between the categories of employers and employees they represent. Every collective labour contract, under penalty of nullification, must contain precise regulations on disciplinary matters, on the extent and payment of compensation, and on the hours of labour.

Article XII.—The action of the syndicate is conciliative and the work corporative organs is to guarantee the approximation of salaries to the normal exigencies of life and to the possibilities of production. The determination of salary is not controlled by any general rule, and is entrusted to agreements between the parties in collective contracts.

Article XIII.—The consequences of crisis in production and monetary crisis should be equally divided among all the factors of production. Statistics collected by the public administrations, by the Central Statistical Institute, and by legally recognized professional associations regarding the conditions of production, the labour situation, the monetary market variations in the life of the workers coordinated and elaborated by the Ministry of Corporations will provide a criterion for reconciling the interests of the various categories and classes, and their interests with the superior interests of production.

Article XIV.—When payment is made by piece-work and the liquidation of piece-work is made by periods of longer than a fortnight adequate accounts must be made weekly or fortnightly. Night work is not included in the regular periodical periods of labour, and is payable at higher rates than day work. When labour is paid by piece-work payment should be determined so that the industrious worker with a normal capacity for labour will be able to attain small earnings above his basic pay.

Article XV.—Employees have the right to a weekly rest corresponding to the Sundays. Collective contracts will apply this principle, taking into account the existing rules and the technical requirements of an undertaking, and, in view of these, will ensure the respect for civil and religious holidays according to local traditions. Employees must scrupulously observe working hours.

Article XVI.—After a year of uninterrupted service in an undertaking requiring continuous labour an employee has the right to an annual paid holiday.

Article XVII.—In undertakings requiring continuous work a labourer has the right, in case his discharge is not due to his own fault, to an indemnity proportionate to years of service. Such indemnity is due also in case of the death of a labourer.

Article XVIII.—The fact of any undertaking requiring continuous work passing into the

hands of a company does not end the labour contract, and the personnel preserve their rights under the new owner. Similarly, the illness of a worker not exceeding a determined length does not terminate a labour contract. A call to arms or service in National Militia is not a cause of discharge.

Article XIX.—Infractions of discipline and acts which disturb the normal functioning of a company committed by workers are punished according to gravity by a fine, suspension of work, or immediate discharge without indemnity. Cases in which these penalties are applicable will be specified.

Article XX.—New employees will be subject to a period of trial during which the right of ending the contract will be reciprocal with payment only for the time of actual work.

Article XXI.—The collective labour contract extends its benefits and its discipline to home workers also. Special rules will be issued by the State to assure the policing and hygiene of homework.

Article XXII.—Only the State can ascertain and control the phenomenon of employment and unemployment of workers, which is a complex index of the conditions of production and labour.

Article XXIII.—Professional associations of workers are obliged to carry out selective action among the workers intended constantly to increase their technical capacity and moral value.

Article XXIV.—Regarding the labour exchanges for skilled workers under the control of the co-operative organs, it is the duty of employers to employ workers enrolled at these exchanges, giving preference to members of the Fascist party and the Fascist syndicates according to the time of their enrolling.

Article XXV.—The co-operative organs must see that the laws against accidents and the policing of labour are observed by individuals in the associations they control.

Article XXVI.—Prevention of accidents, &c., is another manifestation of the principle of collaboration towards which employer and employee must proportionally contribute. The State through co-operative organs and professional associations will produce co-ordination and unification as much as possible.

Article XXVII.—The Fascist State proposes to accomplish first the improvement of accident insurance; second, the betterment and extension of maternity insurance; third, insurance of professional illnesses and tuberculosis, tending towards general insurance against all illness; fourth, the improvement of insurance against involuntary unemployment; and fifth, the adoption of a special endowment insurance for young workers.

Article XXVIII.—It is the task of associations of workers to protect their members administratively and juridically regarding accidents and social insurance. In collective contracts of labour, when possible, the creation of mutual funds for the sick will be established, with contributions by employers, employees, and administrable representatives.

Article XXIX.—Assistance to individuals represented, whether or not they are members, is the right and duty of the professional associations. These must carry out directly through their own organs their functions of assistance. They cannot delegate them to other organizations or institutes except for general reasons exceeding the interests of single category producers.

Article XXX.—Education and instruction, especially professional instruction, is one of the principal duties of the professional associations. They must support the action of the national organizations regarding recreation and other educational initiatives.

Joint Group Insurance Plan of General Motors of Canada, Limited

More than 99 per cent of the employees of General Motors of Canada, Limited, have taken advantage of the co-operative group life insurance recently made available through the largest group policy ever written. Under this plan, which covers both General Motors of Canada, Limited, and the General Motors Corporation, the employees now carry life insurance to a total value of $162,000,000. The policies, limited to $1,000 each, cost the employee only 50 cents per month, the remainder of the premium being paid by the company.

Policies now are carried by more than 3,500 office and factory workers of both sexes at Oshawa and by 600 salesmen scattered throughout the Dominion. The great expense of sharing this premium cost with the policy holders is regarded by the executives as a profitable investment because of the resulting improvement in both the economic status and industrial stability of the workers.

When an employee exercises the insurance privilege within 31 days after becoming eligible, a policy is granted without physical examination. Employees are eligible after three months of service. Besides giving $1,000 life insurance, the policies also provide for payment of 20 equal monthly instalments of $51.04 if the insured should become permanently disabled before reaching the age of 60. An employee who leaves the company may convert his group policy into standard life insurance without physical examination.

During the first month in which the group insurance was in operation, General Motors of Canada, Limited, paid the entire 30-day premium, all employees being automatically covered. The $1,000 face of his policy was paid the family of one Oshawa employee who died during the first month without having paid a single premium.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

New Health Regulations in Ontario

NEW regulations under the Public Health Act of Ontario have been issued on the recommendation of the Minister of Health of the Province. While designed primarily for the protection of public health these regulations contain numerous provisions which particularly affect the employees concerned. Thus, the regulations governing standard requirements for permits for abattoirs and slaughterhouses provide that "the slaughtering, dressing or preparing of animals for food on Sundays or any legal holidays, or at night or prior to seven o'clock a.m., or after six o'clock p.m., will result in the revocation of the permit," provision however being made for special permits to use the premises during the prohibited hours for certain special purposes.

The regulations governing bakeries and handling of bakery products contain the following sections:—

"All workmen and employees while engaged in the manufacture or handling of bakery products in a bakery, shall be provided with slippers or shoes and a suit of washable material made of white which shall be used for that purpose only. These garments shall at all times be kept absolutely clean.

"No person who has any communicable disease or any communicable skin disease shall work in any bakery, and no owner, manager or person in charge of any bakery shall knowingly require, permit or suffer such a person to be employed in his bakery.

"Working rooms shall be at least nine feet in height and shall be supplied with windows in sufficient number and size to ensure a plenteous supply of light and air. The windows must be open into the open air and must be arranged so that they can be opened for ventilation.

"No person employed as driver or deliverer of any bakery products shall carry any such articles in his hands or on his arms unless all such articles are wrapped in paper or material so as to protect them from contact with any dirt or dust. All bread shall be delivered in baskets."

The regulations governing restaurants, etc., contain the following sections:—

"No person shall work or be employed in or about any restaurant or kitchen during the time in which there is any communicable disease in his home, nor thereafter until the quarantine has been removed by the Department of Health. No person shall be employed in or about any restaurant or kitchen who is suffering from any communicable disease.

"Every employee in a restaurant or refreshment room, and every person engaged therein in the handling of food for human consumption, in the municipality, must furnish a certificate from a legally qualified medical practitioner, that he or she is not suffering from any communicable disease, said certificate to be renewed every six months.

"All working men and employees, while engaged in the handling or preparing of food, shall be provided with slippers or shoes, and a suit of washable material, which shall be used for that purpose only. These garments must at all times be kept clean."

In regard to the manufacture, sale, care and storing of ice cream it is provided, among other requirements, that "every person engaged in the manufacture, storage, transportation, sale, or distribution of ice cream, immediately on the occurrence of any case or cases of communicable disease, either in himself or in his family or amongst his employees, or within the building or premises where ice cream is manufactured, stored, sold, or distributed shall notify the Board of Health, and at the same time shall suspend the sale or distribution of ice cream from said premises until authorized to resume same by the said Board of Health."

Regulations governing the delivery of bread require special gloves to be worn by employees handling bread, buns, etc., except when the bread is wrapped with waxed paper.

The rules as to the notification of communicable diseases is repeated in the regulations governing cheese factories.

Ontario Miners and Silicosis Compensation

The Ontario Workmen's Compensation Act was amended in 1926 by the addition of the disease known as miners' silicosis to the schedule of industrial diseases coming under the Act (Labour Gazette, May, 1926, page 450). The disease is defined in the Act as "a fibroid condition of the lungs caused by the inhalation of silica dust." An account of the causes, symptoms and methods of preventing silicosis was given in the issue for June, 1926, page 575. The amending Act contains the following proviso:—

"Nothing in this act shall entitle a workman or his dependants to compensation, medical aid, or payment of burial expenses for disability or death from silicosis unless the workman has been actually exposed to silica dust in his employment in Ontario for periods amounting in all to at least five years preceding his disablement."

The Mine Workers' Union of Canada (Timmins Unit) recently passed a resolution in which the Provincial Government was asked to eliminate the foregoing proviso or else to amend it so as to read as follows: "Nothing in this Act shall entitle a workman or his dependants to compensation, medical aid or payment of burial expenses for disability or death from silicosis unless the workman has been exposed to silica dust in his employment

in Ontario after being medically examined prior to his employment and being found free from silicosis or tuberculosis."

It was further proposed that a medical board should be established for the periodical examination of all mine workers in lieu of the present system whereby doctors employed by the mines have authority to make reports to the board.

The resolution also directed that the Federal government be asked to take immediate steps for the establishment of a federal commission to determine the responsibility of the said federal government in relation to silicosis and compensation amongst mine workers in the various provinces of the Dominion.

Compensation in Ontario during April

During April the Workmen's Compensation Board of Ontario awarded a total of $449,623.11, of which $365,288.91 was for compensation and $84,334.20 for medical aid. The total benefits awarded by the Compensation Board for the first four months of 1927 were $1,971,192.87, which is about $116,000 more than the total benefits awarded in the first four months of 1926. In April there were 5,166 accidents reported to the Workmen's Compensation Board, including nineteen fatalities. This is the lowest number of accidents both as to total and fatalities reported to the Board in 1927. Fatalities in the three former months numbered, in January, 29; in February, 27, and in March, 31.

Commenting on these figures, Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, refers to certain accidents which have recently been reported. An employee in Pembroke had his left foot cut from the ankle to the toes, almost half way through, while cleaning a saw. Subsequently the foot was amputated above the ankle. A worker at Niagara Falls stepped on a moving belt, resulting in severe injuries and death. An employee of a firm at Barrie lost four fingers of his left hand through closing action of press. A worker in Toronto operating a jointer fitted with a square head had four fingers and part of his left hand amputated.

Mr. Morley points out that in many cases the injury is the result of two or three combined factors. This may be illustrated by a recent injury received by a workman when a wrench fell from an overhead platform. The hazard was created by the falling wrench but if the workman had not happened to be in the exact spot at which the wrench fell at the precise moment, he would not have been injured.

The Safety Convention of the Industrial Accident Prevention Associations is being held on Monday and Tuesday, May 9 and 10, at the King Edward Hotel, Toronto, and Mr. Morley, speaking for his Committee, has extended a general invitation to all interested in accident prevention to be present at that Convention.

Industrial Safety Inspectors in British Columbia

The annual report of the British Columbia Workmen's Compensation Board for 1926 (reviewed on another page of this issue) states that the British Columbia Lumber and Shingle Manufacturers, the Shipping Federation of British Columbia, the British Columbia Loggers' Association, and the Shingle Manufacturers' Association of British Columbia have now full-time safety inspectors supervising their plants and works in the hope of reducing the number and severity of their accidents. The success of this innovation has proved most gratifying in the plants of a number of the members of these associations. The Board points out however that reliance on the periodical visits of a travelling Safety Inspector, however efficient and capable he may be, is not sufficient to meet the situation. Relief from the burden of distressing and costly injuries will come to a greater extent from more intensive individual effort in each plant under the guidance and supervision of the Safety Inspectors.

Dangerous Practices at Railway Crossings

The Board of Railway Commissioners for Canada recently published statistics of railway accidents at road crossings, showing the "dangerous practice," mostly on the part of the drivers of automobiles, which resulted in each of the accidents. "In many cases," it is stated, "accidents at highway crossings are due to the negligence of those driving automobiles and other vehicles, and of pedestrians. This negligence is found both at unprotected and protected crossings. The Canadian National Railway lines, from June 13, 1926, to March 31, 1927. show 91 cases where there was danger at protected crossings due to the negligence of those using the crossings. The Toronto, Hamilton and Buffalo lines, from October 25, 1926, to March 15, 1927, show one case. The Canadian Pacific Railway lines, from July 15, 1926, to January 31, 1927, show 111 cases of danger by automobile drivers; 95,203 cases of pedestrians; and 8,574 cases of bicycles, passing under lowered gates.

"Notwithstanding safety devices and cautionary signals, people take chances and dis-

regard safety. Motor accidents are becoming more frequent. Every sane motorist deplores this. If accidents are to be lessened, the same motorist must educate the culpably negligent motorists. The Board hopes that the press will give as much publicity as possible to what is covered in the statement, with the hope that it may educate motor drivers and others to be more careful at crossings."

Safety Survey in United States

Mr. Lewis A. DeBlois, director of the Safety Engineering Division of the National Bureau of Casualty and Surety Underwriters, writing in the March issue of the *American Labour Legislation Review* says: "The American Engineering Council, encouraged by the National Bureau of Casualty and Surety Underwriters, has completed a national survey of industrial establishments to ascertain the relationship of industrial safety to industrial production. Its report will not appear for several months, but it is permissible to state that it will contain much evidence to support the belief that many of those plants which are doing effective accident prevention work have experienced, contemporaneously, greater production efficiency. This research will also produce further evidence of the high indirect cost of industrial accidents, which can be added to those facts which some of the insurance companies are producing. Furthermore, with increasing progress in safety education in the public and parochial schools along the lines laid down by the education division of the National Council, approved by the National Education Association and the Association for the Advancement of Education, and fostered by the local councils of the National Safety Council, we may expect a different attitude of mind in the industrial executive of the future."

Tetra-ethyl Lead Poisoning

The last report of the Department of Labour of New Jersey notes an unusual increase in occupational poisoning cases. Of the sixteen deaths due to occupational diseases of all kinds during the year, twelve were in connection with the use of tetra-ethyl lead. It is stated that "the production of tetra-ethyl lead in its experimental stages in this State caused a large number of occupational poisonings by reason of the unknown intensity of the toxicity of the compound and the illusive and highly volatile character of emanations incidental to its production. Competent medical consulting service and supervision of a high order were invoked by the companies engaged in this line of production. . . . The difficulty of securing perfectly tight vessels led to the adoption of the practice of providing a complete enclosure, with mechanical exhaust, for each processing unit, to remove any vapours that might escape. The methods of protection have been improved recently in such a manner that it is now confidently predicted that manufacturing can proceed with but little danger from faulty apparatus, the greater problem, involving shop discipline and training of workmen to obey instructions to the letter, in an industry where disobedience to shop rules may mean occupational poisoning and death, depending on the personal attitude of those who are employed."

Ontario's "Schools on Wheels"

Canadian Child Welfare News states that the Province of Ontario has two "schools on wheels" for the benefit of the children living in remote settlements along the lines of the Canadian Pacific and Canadian National railways. Many of these settlements, made up of the families of men who look after the railroad beds, lumbermen, forest rangers, or trappers, are more or less temporary in their nature, not having enough children to warrant the opening of a regular school. To meet this situation, the minister of education, with the co-operation of the Canadian railroads, put into operation a few months ago a plan for travelling schools. Ordinary railway coaches have been fitted up with desks, books, blackboards, and other schoolroom equipment, and with living accommodations for the teacher. The two cars now in operation each have six or seven points of call, stopping for periods varying from three to six days, according to the number of children. Provision is not made for settlements with more than 12 pupils as it is intended that where more than this number are collected a regular school will be opened. All points of call are visited at least once a month, and provision is made so far as possible for the pupils to continue their work between visits. The school cars are given an enthusiastic welcome everywhere, and requests have been received from adults, many of whom are French-Canadian or of foreign descent, for evening classes, especially classes in English.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Principles of Vocational Education

THE following summary of the principles of vocational education is based on a statement prepared by Mr. David Snedden, of Teachers' College, Columbia University, New York.

The term "vocational education" denotes training and instruction towards a recognized vocation. It should not denote or suggest vocational guidance. It is not properly applicable to manual training where these are designed to add to general education. Training towards ability in any and all vocations is included under the designation "vocational education"—for the professions and for the homemaking callings, no less than for the commercial, farming and industrial vocations.

Since competency to perform a given vocation is often composite, a school or other agency may sometimes give only one, or a few phases of the total training called for. For example, an extension vocational course may be designed to give only technical knowledge. An apprenticeship course may give only skill. In each of these fields, a given course or school may give only a first stage, last stage, finishing stage, or even, perhaps, pre-apprenticeship stage of the total competency demanded in the vocation.

Under the ancient and once universal methods of vocational education young workers acquired skill in, and knowledge of a given vocation by watching, imitating and copying their elders. For complicated and "secret" vocations these methods were in time superseded by regularized apprenticeship. When certain vocations became still more exacting, as in medicine, war leadership, painting, engineering, apprenticeship methods gave way to vocational training schools, which at first usually supplemented apprenticeship, but in time took over both training in skills and instruction in technical knowledge. Apprenticeship methods have become inadequate to modern demands in certain modern industries and therefore one of the purposes of the modern movement for vocational education in schools is to supplement or to replace antiquated apprenticeship training in whole or in part, as has long ago happened in medicine, teaching (in England), law, nursing and other vocations now prepared for wholly in schools.

In the farming and homemaking vocations, the old methods are inadequate to impart recently discovered technical knowledge, and the modern movement for vocational education in schools urges and demands vocational schools here also. "Pick-up" methods are in many cases demonstrably wasteful of the time, energies, vocational enthusiasm and creative impulses of millions of workers. The leaders of the current movement for vocational education in schools therefore ask for vocational schools to supplant these wasteful, destructive and even ruinous methods. In many trades or other vocations in which apprenticeship methods of training still prevail, masters and journeymen workers desire that properly equipped schools shall give some pre-apprenticeship training, extension instruction, or technical training parallel to apprenticeship work to aid in the more complete vocational training of the novice.

To the problem whether public funds and public control should be used to support vocational education, there is now just one reply: vocational education is entitled to public support and control no less than general education whenever it can be demonstrated that; first, there is a large social need for the services rendered by trained workers in the vocation, or that there are substantial numbers of persons who need educational help in acquiring competency in that vocation; and, second, that non-public agencies of support and control are not adequate to give the needed education.

General education is valuable irrespective of vocations to be followed, but the values of all elementary and junior high school education are general, not vocational. All usual high school studies are to be justified as general, not vocational education. Commercial courses tend in some cases to become vocational, perhaps only for the stenographer-typist calling. High school manual training has rarely any true vocational functioning. Home economics, now found in nine thousand high schools, is as yet without clear vocational aims.

General education is now in America relatively very democratic—equally open to rich and poor, to all social classes, and to nearly all grades of ability. In contrast, vocational education is shamefully undemocratic. Plenty of vocational school, professional and some others, are provided for the gifted and prosperous. Almost none are provided for the ungifted and poor—only the "sink or swim" of pick-up methods. Forty million dollars a year is spent on stenographer-typist training, and a few closely related "clean collar" clerical callings, but nothing for the mining and

factory callings, the grimy vocations. Perhaps $25,000,000 a year for "agricultural leadership," and only a sop for the "dirt farmer" callings. Some hundreds of thousands on printing, electrical work, and machine shop practice, which already have apprenticeship, but nothing on the textile and other factory callings followed by millions. Hence the present wide-spread demand from social workers, parents, employers, trade unionists (to some extent) and unprejudiced educators that, through appropriate public schools, provision be made for direct and honest vocational education for such vocations as seem to need it (probably hundreds), either for the sake of the public or for the sake of the workers. Vocational education lends itself very little to traditional academic methods—a fact academic minds find it hard to grasp. Hence the innumerable substitutes, imitations, and "pre-vocational approaches," now so popular in junior and senior secondary schools and elsewhere—the shopwork, industrial mathematics, mechanical drawing, technical subjects, classroom agriculture, general salesmanship. Vocational guidance, most valuable as a phase of general education, is by some supposed to help vocational training.

Few serious difficulties need be expected in establishing good vocational training for any vocation—tailoring, street car driving, coal mining, poultry farming, restaurant table-waiting, high school teaching of physics, sea-faring, locomotive driving, bricklaying or shoe selling —if direct approach is made to the task. Any educational executive, given ample money, could in a year readily establish a vocational school for any one of the above callings, if he had not to take pupils at 14-16 years, to incorporate this school into an existing high school, or to affiliate a series of general studies.

Few forms of vocational training can profitably be taken by children, persons under sixteen years of age; few can be accommodated within buildings and faculties devoted primarly to "general" schools; few can be effective without supervised part-time productive work in commercial establishments; and few can carry a load of "correlated" liberal or college preparatory studies. Hence, if America is to have honest, efficient, and democratic vocational education for each of the several hundred callings now manifestly in need of it, special schools in each case must be provided. Sometimes these can well be located under the same roof as schools of general education —for example, stenography and drafting. Sometimes half the school can be located there, and the other half on the soil, in barns, in homes, on buildings being erected in the neighbourhood—wherever practical work for the vocation can be shared in. It is very hard for academic minds to think of a "school" as other than an enclosed space with seats, blackboards, etc. They find it almost impossible to realize that the major part of an efficient school for farming should be on the land, or in poultry yards—that often the more vital part of a school of homemaking is in home kitchens, bedrooms and laundries; and that the major part at least of a school of street car drivers must be on street cars. Often, however, no part of a vocational school can profitably be located in high-school buildings. A really good school of printing in New York City should be located not in the outskirts of the city, but in the printing centre. A school of navigation had best be located on a vessel. Specialized schools for shoe selling, for book selling, for carpet selling and the like had best be located in department stores. Certainly no sane person would propose to take schools of bedside nursing away from their present locations in hospitals. Very seldom can vocational schools be administered on the same area basis as high schools. We already see that it requires the entire country as a district for West Point; an entire state for a medical college; and perhaps a third of a state for a normal school. Each large city could maintain one good school of printing, one of carpentry, one of street car driving and one of shoe repairing. But less concentrated areas of settlement need very large districts. Perhaps one good school of printing could serve all western New York, or the State of Delaware. Hence the almost silly Utopianism of the "Cosmopolitan High School."

Summary

1. There is no future for true vocational education in any junior high schools, or under the age of sixteen at the lowest; that is, under standard of living conditions now developing in America.

2. Only a small percentage of girls will, or should, take realistically vocational homemaking education under nineteen to twenty-three years of age. Hence high school home economics should be primarily cultural, except for perhaps ten per cent of the girls, usually those who can have no hope of graduating from ordinary academic subjects.

3. Good vocational education for all the vocational beginners (ages 16-22) and for all those seeking upgrading into promotional or leadership vocations (ages 19-40) will not cost enormous sums, largely because in so many cases 12 to 30 weeks of intensive 8-hour per

day training will suffice for the great majority of manufacturing, mining, transportation and selling vocations. Probably $200,000,000 per year (one-tenth of what we now spend on public schools) would be ample to provide full-time training for all vocations except the professions and farming.

4. There is only a poor future for vocational education in evening schools, compulsory continuation schools, extension courses, and other fragmentary offerings, which too often come to the individual when tired. The real future belongs to "full-time" training, for either beginners or "up-graders".

5. Vocational and general liberal education corrupt and nullify each other when offered in the same school or in programs of closely alternating courses.

6. All good vocational training should be operated on an "individual" basis—some form of Dalton plan, with project bulletins, etc.—and be progressively led into "self-education."

7. Vocational schools should rarely produce commercial wares or products. Rather their students, apprenticed in effect to the school, should be placed out in commercial concerns for practical training, after certain very slightly initiatory experience in school shops, homes, farms, ships, railways or mercantile enterprises.

The Decline of Apprenticeship

In discussing the question of apprenticeship in one of its recent issues the *Toronto Trade Unionist* made the following statements:

One of the most urgent of the problems with which the Trade Union Movement has to deal is that of the industrial destiny of the hundreds of thousands of young people who are annually dismissed from the schools to find what opportunities they can in the labour market. An important aspect of the problem is dealt with in the latest of the reports issued by the "Balfour" Committee on Industry and Trade, which in its review of "Factors in Industrial and Commercial Efficiency" deals at length with the question of apprenticeship.* The system of apprenticeship, which has a long, and on the whole creditable history in this country, has been decidedly on the decline since the industrial revolution; and the methods of mass production and standardization, which are so characteristic of modern industry, have undoubtedly hastened the process of decay.

The phenomenon was concisely explained in a report presented to the Trade Union Congress in 1922, when the following main factors in the decline of the system were noted:—

1. The demand for specialization in the new processes of large scale production and the subsequent division of skilled trades.
2. The inadequacy of the wage earned by child labour, now substituted for maintenance and education, which was formerly provided by the employer.
3. The elimination of the need for long periods of training to meet the requirements of modern industry.
4. The loss of the personal bond which was the essential feature of the original apprenticeship system.

The report advocated the revival of apprenticeship on lines suited to modern conditions, and while rejecting, in view of the attitude of the unions generally, a proposal that young entrants should be apprenticed to the unions instead of to individual employers, made valuable suggestions which may be summarized as follows:—

Apprenticeship must, in these days be considered as a phase of national education. Apprenticeship should no longer be a question of a relationship between the employer and the apprentice. The responsibility for an apprentice should be the concern of the industry as a whole, and it is therefore suggested that a competent authority, consisting of employers' representatives and Trade Union representatives for the industry, together with the education authority, should form a joint apprenticeship committee, and this committee should be responsible for the whole scheme of apprenticeship training as it affects the particular industry.

There are, of course, several types of apprenticeship, but for practical purposes it may be assumed that the definition given in the Trades Union Congress report holds good. The ideal apprenticeship system, according to this definition;

Must guarantee adequate supervision and training, physical, moral, and mental, up to the age of 18;

Must supply effective training, general and specialized, in the industry in which the apprentice is engaged;

Must provide, on completion of apprenticeship, a reasonable chance of employment in the occupation for which definite preparation has been given.

The common sense of this definition, from the point of view of industrial efficiency, is obvious. Progressive employers, according to the Balfour Committee, are evincing an increasing interest in the technical training of their apprentices and juvenile employees generally, but the problem of providing

*This part of the Committee's report was reviewed in the last issue, page 412.

"reasonable chances" of employment for the efficiently trained worker, at the end of his apprenticeship, is one which private enterprise is not likely to solve satisfactorily under the best of conditions; certainly it would fight shy of the job in a time of acute trade depression. The Balfour Committee, accordingly, has nothing to say on this topic. It has a good deal to say, however, on the question of "Supply of Apprentices." Here the defects of the existing practice—defects which are undoubtedly due to the point of view of private enterprise—are dealt with in candid phrases.

"The main source of supply," says the report, "is necessarily those boys and girls who have left school and have been in employment for one or two years, since the age of apprenticeship is, in general, higher than the age at which boys and girls leave the elementary school. The kind of work upon which the apprentice is engaged before he becomes an apprentice materially affects his usefulness, particularly during the first years of apprenticeship. A boy who was in steady employment before he became an apprentice is, obviously, better material for training than the boy who was engaged on work of a casual or seasonal character. Again, it is clearly to the advantage of the employer that the prospective apprentice should have been engaged in work which, even if of an unskilled type, has some relation to the trade in which it is intended that he should be trained. One would have expected, therefore, that employers would arrange to recruit their apprentices, so far as might be practicable, from among the juvenile workers in their own trade, but it is doubtful whether this practice is common."

Notice is taken by the committee of the reluctance of many boys to become apprentices, and the explanation for this is illuminating. Apprentices receive a lower wage than non-apprenticed juvenile workers, since they reckon among their emoluments the training and supervision they receive. But "widespread unemployment, and the consequent greater dependence on the boys' earnings, make juveniles and their parents prefer the relatively higher immediate wages of non-apprenticed employment, while the unemployment in certain trades deters juveniles from entering them as apprentices or otherwise." In other words, large masses of the workers are too poor to be able to take advantage of opportunities to equip their children for the fight against poverty.

In a review of the attitude of organized industry towards apprenticeship, the committee pay a decided tribute to the part played by trade unions in safeguarding the interests of the young workers in the industries for which they cater. The committee found that in most industries apprentices are not members, or at least not full members, of the trade unions concerned. in some cases the indentures specifically forbid apprentices from becoming members of unions formed for industrial purposes.

"But some unions," says the report, "claim a direct interest in apprenticeship, even though apprentices may not be contributors to their funds. In some industries trade unions have rules relating to the length of apprenticeship, the age of entering into apprenticeship, the wages to be paid to apprentices, and the ratio of apprentices to journeymen. These rules may be embodied in agreements made with employers' organizations, as in the case of the printing and building industries; may be recognized by employers, but not embodied in joint agreements; or may not be recognized by employers at all.

"In general the influences of trade unions have helped to arouse interest in the training of apprentices, while in some industries, for example printing, the discussions on apprenticeship questions between employers' associations, on the one hand, and trade unions on the other, have been of value in creating an atmosphere of good-will."

The report undoubtedly warrants the conclusion that, given the trade revival which the committee appears to anticipate, a properly worked out scheme of apprenticeship, made conformable to modern conditions, would prove an advantage to the workers as a community, and would do much to maintain a high level of industrial efficiency. Such a scheme would need to offer free opportunities to the young worker to qualify for positions of the highest control, positions which, as matters are at present, are very largely preserved for recruits from the secondary and public schools and the universities.

There are features in the older forms of apprenticeship—notably the "personal bond" to which allusion is made in the Trades Union Congress report—which it may be difficult to retain in large scale industry, but it would be all to the good of the community that the young workers should be made to feel, at the outset of their career, that the community itself, at least, is deeply concerned, and that not merely as a matter of efficiency, to give them the best possible chance to share intelligently in those activities which made for the welfare and progress of mankind.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Tenth Session of the International Labour Conference

THE Tenth Session of the International Labour Conference opens in Geneva on May 25. The agenda of this Conference consists of the following items:—

1. Sickness Insurance.
2. Freedom of Association.
3. Minimum wage fixing machinery in trades in which organization of employers and workers is defective and where wages are exceptionally low, with special reference to the home working trades.

Apart from the foregoing, the Director of the International Labour Office will submit an annual report on the work of the International Labour Office and also on the measures which have been taken in various countries to give effect to the Draft Conventions and Recommendations of the International Labour Conference.

The Canadian delegation to the Conference is made up as follows:—

Government Delegates.—Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland; and Mr. R. A. Rigg, Director of the Employment Service, Department of Labour, Ottawa, Canada.

Technical Advisers to Government Delegates.—Mr. L. L. Peltier, Legislative Representative of the Order of Railway Conductors, Ottawa, Canada; and Mr. Joseph Comeau, of the Federation of Catholic Workers of Canada, Montreal, Quebec.

Employers' Delegate.—Mr. W. C. Coulter Vice-President and General Manager, Booth-Coulter Copper & Brass Co., Ltd., Toronto, Ont.

Technical Adviser to Employers' Delegate.—Mr. H. W. Macdonnell, Secretary, Industrial Relations Department, Canadian Manufacturers' Association, Toronto, Ont.

Workers' Delegate.—Mr. P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Montreal, P.Q.

Ratification of Conventions by Jugo-Slavia

The ratification is announced by the Kingdom of the Serbs,—Croats and Slovenes of twelve Conventions adopted by the International Labour Conference at its First, Second, Third and Seventh Sessions, respectively. These ratifications bring the total number registered up to 229. The action taken by the Kingdom of the Serbs-Croats and Slovenes may be regarded as one of the direct and immediate results of the official visit which was paid recently to Jugo-Slavia by Mr. Albert Thomas, the Director of the International Labour Office.

The twelve Conventions which have been approved by Jugo-Slavia are as follows: Unemployment; Employment of Women before and after Childbirth; Employment of Women during the Night; Minimum Age for admission of Children in Industrial Employment; Night Work of Young Persons employed in Industry; Minimum Age for Admission of Children to Employment at Sea; Application of the Weekly Rest in Industrial Undertakings; Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers; Compulsory Medical Examination of Children and Young Persons employed at Sea; Workmen's Compensation for Accidents; Workmen's Compensation for Occupational Diseases; and Equality of Treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents.

The Eight-Hour Day in France

Three decrees were issued in France during March, applying the eight-hour day and the forty-eight hour week to the food industries. They cover all workers and employees in establishments where such industries are carried on, even though their occupation is not of the nature of such industries, provided that their work is exclusively for the purpose of the upkeep or carrying on of such establishments or their branches.

Potted Meats, etc.—A decree of March 3, covers the manufacture of potted and salted meat and meat pastes, jellies and extracts; manufacture of pork products, tripe, etc.; tallow factories and the manufacture of margarine and other edible fats; and establishments for the treatment of edible offal of all

kinds. The decree does not apply to persons permanently attached to slaughter-houses by establishments in which the aforesaid industries are carried on, and taking part exclusively in the work of slaughtering or in work accessory thereto.

Pastes and Tapioca.—A decree of March 4, covers establishments or branches of establishments in which is carried on the manufacture of edible pastes and the manufacture of tapioca.

Preserved Vegetables, etc.—A decree of March 5 covers the manufacture of vegetable or fruit preserves; manufacture of preserved mushrooms and truffles; desiccation, decortication, peeling, crushing and other treatment of vegetables, fruits, and all vegetable food products; roasting of coffee, chicory and food products; decafeinisation of coffee; manufacture of vinegar, mustard and other condiments, and flavouring essences. The provisions of this decree do not apply to (1) jam and preserves factories already subject to the provisions of the decree of August 6, 1925; (2) the milling industry, already regulated by the decree of December 31, 1920; (3) the rice and starch industries, which will be specially regulated.

The Right of Association by Employers and Employed

Industrial and Labour Information (published by the International Labour Office) points out that "the Preamble to Part XIII of the Treaty of Versailles, which determines the objects of the International Labour Organization, expressly includes 'recognition of the principle of freedom of association' among the means of improving the conditions of the workers and establishing universal peace. Article 427 also includes among the principles of special importance, 'the right of association for all lawful purposes by the employed, as well as by the employers.' The Treaty of Peace itself thus confers on the International Labour Organization authority, and imposes on it the duty, to secure the principle of freedom of association by means of international regulation.

"These general considerations may be supplemented by others of a constitutional nature. Employers' and workers' associations are called upon to take an active part in carrying out the work of the Organization, and it is therefore essential that their formation and development should not be impeded.

"Furthermore, certain decisions of the International Labour Conference presuppose that freedom of association is already achieved. As early as 1923 the Governing Body of the Office determined to deal with the problem as a whole and, pursuant to a Resolution of the Conference, decided in 1926 to insert the question on the Agenda of the Tenth Session of the Conference, which is to open at Geneva on May 25 next.

"In order to facilitate the general discussion of the question, which will take place this year, the Office has prepared a report and a draft questionnaire, which will be issued shortly. The report deals with problems of freedom of association and their origin, with the question of individual rights of occupational association and similar questions. The draft questionnaire suggests certain general principles, which might, if the Conference so decides, be ultimately incorporated in a Draft Convention on the subject."

International Survey of Legal Decisions on Labour Law, 1925

From 1920 onwards the International Labour Office has published in its Legislative Series the labour legislation enacted in different countries. The wish has repeatedly been expressed that information might also be published concerning the application of these laws by the competent authorities, and particularly by the courts which deal with industrial matters. To meet this need it seemed to the International Labour Office that the Legislative Series might well be supplemented by an International Survey of Legal Decisions on Labour Law. Accordingly, the Office recently issued the first volume of this series of publications entitled "International Survey of Legal Decisions on Labour Law, 1925."

It was found necessary to limit the number of countries under consideration. The legal decisions dealt with in the present volume are confined to England, France, Germany and Italy, which represent the most important legal systems in force in Europe. In the selection of legal decisions preference has been given to those concerning questions of legal principle which might facilitate the development of labour legislation in other countries and are thus of international importance. The majority are concerned with legal questions which are more or less frequently raised in all countries alike. Others, such as those relating to the legal positions of foreign workers, are of direct importance for the settlement of international legal questions.

The legal decisions are classified under the following headings:—

(1) General principles of labour law;
(2) Right of association;

(3) Participation of workmen in the management of the works (works councils);
(4) Individual contracts;
(5) Collective agreements;
(6) Salaries and wages;
(7) Hours of work;
(8) Labour disputes;
(9) Procedure in labour cases;
(10) Protection and special rights of specified occupational groups;
(11) Protection of women, young persons and children, and men disabled in war;
(12) Placing and unemployment;
(13) Inspection of labour;
(14) Social insurance;
(15) Miscellaneous.

Recent Publications regarding the International Labour Organization

Those interested in the activities of the International Labour Organization of the League of Nations will welcome two recent publications, one entitled "History of the International Labour Office", by the Right Hon. George N. Barnes, a former trade union secretary and a member of the British War Cabinet, and the other entitled "The International Labour Organization" by Paul Perigord, Ph. D., formerly of the French High Commission to the United States, now Professor of French Civilization in the University of California, Southern Branch.

Mr. Barnes' book protrays in vivid detail the history of the Geneva Labour Office from its foundation to the present time. In a preface, Mr. Emile Vandervelde, Minister of Foreign Affairs of Belgium, who had been associated with Mr. Barnes in the commission which prepared the Charter of Labour at the Peace Conference in 1919 and laid the foundation of the Organization as it is to-day, describes the important part which Mr. Barnes played in its history. The author, in setting out the large achievements of the Organization, bases thereon a plea for its more cordial support by European Governments generally, and by the British Government in particular. In view of the activity of the forces of disorder and anarchy prevailing, especially in the international sphere, he appeals for "reasoned support for an organization which has already done much and may do much more to lift labour into the enjoyment of those amenities of life which should be the common heritage of all those who work."

Dr. Perigord, in a preface to his book "The International Labour Organization" states that the purpose of its publication was to call the attention of the American public to the International Labour Organization of the League of Nations, by which labour has officially entered upon its international stage; to show its sociological and political background; to describe its genesis, structure and achievements; and to study the problem of American participation in this first attempt at world-wide co-operation between capital and labour.

The author states that it is in vain that reactionary groups attack the idea which is the basis and inspiration of the Organization. That idea is, the urgent need of periodical assemblies bringing together governments, employees, workers, experts, humanitarians; to afford greater protection, fuller justice, a larger and higher life to the worker, without crippling production and hampering the employer in its legitimate efforts towards the increase of national and personal wealth; and the maintenance of a permanent office with a competent staff and adequate resources to prepare with the utmost care the international agreements which will consecrate social progress and make its onward march safe and certain. The idea is here to stay, although there may be a wide difference of opinion as to the best way to bring about its concrete realization.

Dr. Perigord points out that, whatever may be the official attitude of the United States and notwithstanding the opposition of reactionary bodies the world over, there functions at Geneva a well planned and ably administered institution which is not a hasty innovation but which has been in the making for over a hundred years, which enjoys the protection of the League, is endorsed by fifty-six nations, has a budget of over one and a half million dollars a year, and is supported by the entire labour world with the exception of the revolutionary groups. He believes that the International Labour Organization will not only tend to the welfare of humanity, but will give birth to a charter for the physical, moral, and intellectual well-being of the wage-earning class, and thereby strengthen and consolidate our entire democratic system in an atmosphere of world peace and co-operation.

The Saskatchewan Educational Association, at a convention held at Moose Jaw in April, adopted a resolution to the effect that the Association should join with the Saskatchewan Teachers' Alliance in urging upon the provincial government the necessity for a pension scheme for teachers in the province.

RECOMMENDATIONS OF THE EXECUTIVE OF THE EMPLOYMENT SERVICE COUNCIL OF CANADA

THE Executive of the Employment Service Council of Canada met in Ottawa on April 29 to make presentation to the Minister of Labour of the recommendations passed at the last meeting of the Council. The Employment Service Council of Canada, a body composed of representatives of the Federal and Provincial Governments, employees, employers, farmers, and returned soldier organizations, acts in an advisory capacity to the Minister of Labour respecting the operations under the Employment Offices Co-ordination Act.

Chief among the representations to the Minister was one concerning the problem of the stabilization of employment, specifically in the building and construction industries. It was pointed out by the Executive that it is generally recognized by contractors, at least so far as larger building undertakings are concerned, that work may be carried on practically as cheaply during the winter months as during the balance of the year. However, with a considerable programme of building in prospect throughout Canada at the present time, work had been slow in starting, and it was anticipated that when it did begin the usual rushing of jobs would take place for a few months, with severe unemployment for those involved again in evidence next winter. As a substantial step toward the regularization of employment it was urged upon the Minister that he bring to the attention of the various governments and public bodies the necessity of smoothing out the program of work over the twelve months of the year.

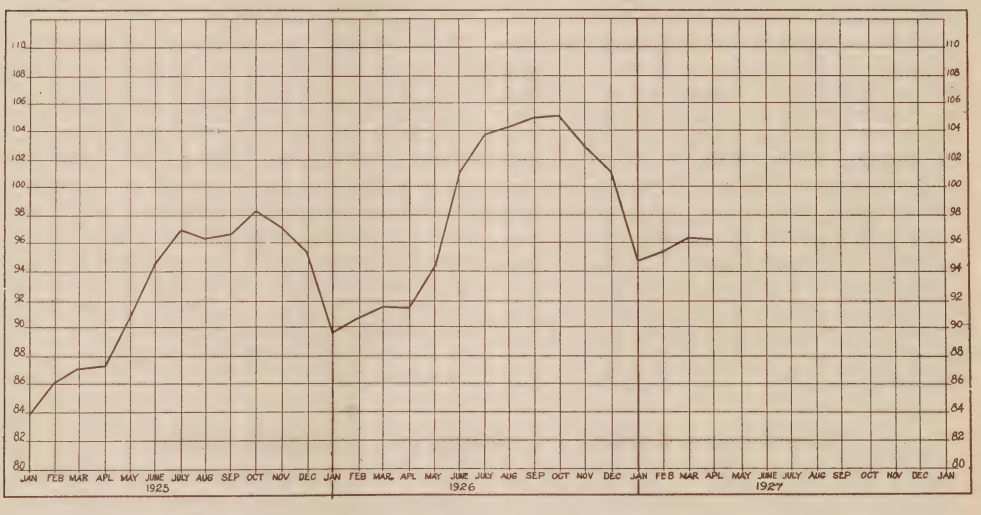
The Minister's attention was also called to the recommendation of the National Conference on Winter Employment in Canada, which was held in Ottawa in September, 1924, which urged that federal, provincial and municipal governments should aim at the construction of public works being undertaken when the demand for construction labour made by private interests would be at its lowest ebb. The Minister assured the Executive of his full sympathy with this important recommendation and promised it favourable consideration.

Recommendations of the Council in connection with the matter of employment along other lines were also made, as well as recommendations concerning the functioning of the Employment Service of Canada. The Minister discussed these matters with the Executive with a view, in each case, to giving effect to the Council's decisions.

The personnel of the Executive present at the meeting were Mr. C. P. Riddell, secretary, Railway Association of Canada, and chairman of the Council; Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada, vice-chairman; Mr. E. Blake Robertson, representative of the Canadian Manufacturers' Association; Mr. Tom Moore, president, Trades and Labour Congress of Canada; and the secretary, Mr. R. A. Rigg, Director, Employment Service Branch, Department of Labour. June 23-4, 1927, was decided upon as the tentative date for the holding of the regular annual meeting of the Council.

International Labour Legislation and Economic Theory

In its April issue, the *International Labour Review,* the monthly publication of the International Labour Office, has an article entitled "International Labour Legislation in the Light of Economic Theory" by Herbert Feis, Professor of Economics, University of Cincinnati, U.S.A. Special interest is given to this article by its close connection with the question whether the regulation of labour conditions by international action is either legitimate or desirable. The apparent contradiction between such regulation and the "classical" economic theory has often been commented on in recent years. The classical economic theory strives to account for a great contrast in the economic lot of the workers of different countries, and regards this contrast as in the main inevitable. If so, it might be asked whether any of the conditions of life and labour of the working classes can be improved by joint international action, and whether there be any possible way of reconciling the two conflicting points of view. In dealing with these questions, Professor Feis examines, in the light of the classical theory, the intrinsic value and possible effects of the principles laid down in Part XIII of the Treaty of Versailles. His comparison of the two seemingly contradictory opinions provides an opportunity for a discussion of the whole question. The result of his analysis is neither a defence nor a criticism, and still less a system; it is simply the outcome of the reflections of an impartial economist on the numerous questions which have presented themselves for solution. The author's aim is not so much to reach a clear and decisive conclusion, as to show the complexity of the problem and stimulate the reader to devote further thought to it himself.



EMPLOYMENT SITUATION AT THE BEGINNING OF APRIL, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of April showed a small decline, which, although involving a rather larger number of workers than that noted on April 1, 1926, was nevertheless considerably less extensive than were the losses reported on that date in earlier years of the record. The situation continued to be decidedly better than on April 1 in any other year since 1920. The Dominion Bureau of Statistics tabulated returns from 5,931 firms, whose staffs aggregated 795,727 persons, compared with 797,289 in the preceding month.

Maritime Provinces.—In contrast with the pronounced declines shown on April 1 last year, there was an increase in employment in the Maritime Provinces on the date under review, when the 501 co-operating firms increased their payrolls by 299 persons to 64,584. Manufacturing, mining and construction were decidedly busier, but logging and transportation were seasonally slacker. The situation was better than at the beginning of April in the last three years.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

The index number stood at 96.2, as compared with 96.3 on March 1, and with 91.4, 87.2, 89.3, 87.6, 80.8 and 84.1 on April 1, 1926, 1925, 1924, 1923, 1922 and 1921 respectively.

Manufacturing, mining, communication, transportation, construction, services and trade recorded improvement, but there were heavy seasonal decreases in logging.

Employment by Economic Areas

The Maritime Provinces, Ontario and British Columbia reported heightened activity, while curtailment was recorded in Quebec and the Prairie Provinces.

Quebec.—Manufacturing showed improvement, especially the metal and textile industries; trade, transportation and communication also afforded more employment, while railroad construction reported a decrease. Statements were received from 1,298 employers with 221,734 workers, as against 225,714 on March 1. The index was much higher than on the corresponding date of any other year since 1920.

Ontario.—Further, though smaller gains were registered in Ontario, where 2,728 firms added 794 employees to their staffs, bringing them to 336,382 on April 1. Much larger reduc-

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

tions had been indicated by the 2,655 firms making returns for the same date in 1926, when the index, at 88.0, was over six points lower than at the beginning of April this year. Seasonal curtailment was shown in logging, and railway construction was also slacker. On the other hand, manufacturing, mining, communication, transportation, construction, services and trade recorded gains; within the first named, the lumber, pulp and paper and textile industries reported the largest increases, while employment in iron and steel showed no general change, despite pronounced temporary losses in automobile production.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

Industries	[1]Relative Weight	April 1 1927	Mar. 1 1927	April 1 1926	April 1 1925	April 1 1924	April 1 1923

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Prairie Provinces.—As is usual at the beginning of April, there were decreases in employment in the Prairie Provinces on the date under review, chiefly in logging, coal mining and construction. Manufacturing, steam railway operation and trade, however, registered important gains. The working forces of the 777 co-operating employers aggregated 101,156 persons, as compared with 102,216 on March 1. The index, at 94.8, was between six and seven points higher than on April 1, 1926; it was also higher than on the same date in any other year since 1920.

British Columbia.—Continued improvement was noted in British Columbia, according to returns tabulated by the Bureau from 627 firms employing 71,871 workers, or 2,385 more than in the preceding month. Additions to staffs had also been indicated on April 1 a year ago, when employment was at the same level. The greatest gains were in lumber and fish-preserving establishments and construction, while logging firms released some employees.

Table I gives index numbers by economic areas.

Employment by Cities

Employment increased in Montreal, Quebec, Toronto, Ottawa, Hamilton and Vancouver, while in Windsor and the other Border Cities and Winnipeg there were declines.

Montreal.—Continued improvement was shown in Montreal, 704 firms reporting an increase of 2,324 persons in their staffs, which brought them to 110,530 on April 1. The situation was better than on the same date last year, when increases had also been shown. Manufactures, particularly iron and steel, transportation, construction and trade recorded heightened activity on the date under review.

Quebec.—Construction registered the most outstanding gains in Quebec City, while manufacturing was somewhat slacker. Statements were received from 88 employers with 9,298 workers, as compared with 8,974 in the preceding month. Employment was in less volume on April 1, 1926, the additions to staff then recorded having been smaller.

Toronto.—Further and larger gains that exceeded those noted on the corresponding date last year were reported in Toronto. The index then was several points lower. The working forces of the 784 co-operating firms totalled 99,855 persons, or 2,352 more than on March 1. Considerable increases were registered in manufacturing, construction, services and trade.

Ottawa.—There was a general, though moderate advance in employment in Ottawa, chiefly in manufactures. An aggregate payroll of 9,832 workers was reported by the 129 employers whose statistics were tabulated, and who had 9,668 in their last report. Conditions were better than at the beginning of April, 1926.

Hamilton.—Manufacturing in Hamilton, notably in iron and steel works, recorded increased employment. Returns were compiled from 205 firms in Hamilton employing 29,503 persons, or 832 more than on March 1. The index of employment was higher than on the same date a year ago, when smaller gains were indicated.

Windsor and the Other Border Cities.—Owing to a temporary cut in production in automobile plants, there was a loss in employment in these cities on April 1, which caused the situation to be less favourable than on the corresponding date last year. Data were received from 89 firms employing 8,683 workers, as against 11,597 in the preceding month.

Winnipeg.—A small decrease was recorded in Winnipeg, where 87 persons were released by the 291 employers furnishing statistics, who had 27,077 workers on their payrolls. Manufactures were slightly busier, but there was a falling off in construction. A similar decline took place on April 1, 1926, when the index was several points lower.

Vancouver.—Continued, but less extensive gains were noted in Vancouver, according to 225 firms employing 24,750 workers, or 153 more than on March 1. The most pronounced improvement took place in construction, while manufacturing as a whole was rather slacker. Although larger advances were made on April 1, 1926, the index then was rather lower.

Index numbers by cities are given in Table II.

Manufacturing

Further improvement was recorded in manufacturing, particularly in the lumber, pulp and paper, textile, non-ferrous metal and animal food groups and in iron and steel, which on the whole showed considerable gains, despite the losses in automobile works already mentioned. Leather boot and shoe and tobacco factories, however, reported smaller payrolls. Statements were received from 3,784 manufacturers employing 463,721 operatives, as compared with 456,230 in the preceding month.

The situation continued to be better than on the corresponding date in any other year since 1920; in most of the intervening years the trend had been upward.

Animal Products, Edible.—Further improvement was noted in fish canneries and dairies, that in the former taking place chiefly in British Columbia, and in the latter, in Quebec. Statements were tabulated from 172 firms employing 14,764 workers, as against 14,263 at the beginning of March. This increase was over twice as large as that recorded on April 1, 1926, when the index number was some six points lower.

Leather and Products.—Boot and shoe factories reported reductions in personnel, while minor gains were noted in other branches of this group. The 195 co-operating employers reduced their payrolls from 18,050 in the preceding month to 17,604 at the beginning of April. The largest losses were in Quebec, Ontario and the Maritime Provinces. Practically no change was noted on April 1 a year ago, but the situation then was rather less favourable than on the date under review.

Lumber and Products.—Considerable seasonal expansion was indicated in rough and dressed lumber factories, while container, furniture and vehicle works were also busier. The improvement was not quite as pronounced as on the corresponding date a year ago; the index number then, however, was one point lower. Statistics were compiled from 687 manufacturers employing 43,734 workers, as compared with 42,337 at the beginning of March. The tendency in Ontario and the Western Provinces was decidedly upward, but elsewhere declines were recorded.

Musical Instruments.—There was an increase in employment in musical instrument factories, 42 of which employed 3,226 workers, or 112 more than on March 1. The increase was largely confined to Ontario. Employment was more active than at the beginning of April last year.

Plant Products, Edible.—There was a comparatively small falling off in employment in vegetable food factories on the date under review, losses in starch and glucose, sugar and syrup, flour and cereal mills being partly offset by improvement in biscuit, chocolate, confectionery and some other divisions. Returns were tabulated from 308 firms whose payrolls declined by 177 persons to 25,467 at the beginning of April. Ontario reported the bulk of the shrinkage. Insignificant gains were indicated on April 1, 1926, but the index number then was slightly lower.

Pulp and Paper Products.—The movement in pulp and paper mills was upward, and factories producing miscellaneous paper goods were also busier, according to data received from 460 firms. They employed 57,074 workers, as compared with 55,392 in their last report. A large proportion of the advance took place in Ontario, although there were also increases in the Prairie Provinces. Employment was in decidedly greater volume than on April 1 last year, when much smaller gains were noted.

Textile Products.—Additions to staffs on practically the same scale as on the same date in 1926 were registered in this group, but the index number continued to be higher than on April 1 in any other year since 1920. Statements were compiled from 510 manufacturers with 75,320 employees, or 1,177 more than at the beginning of March. The largest gains were in Quebec and Ontario, but the tendency generally was favourable. Cotton, silk, hosiery and knitting, garment and personal furnishing plants recorded larger payrolls.

Tobacco, Distilled and Malt Liquor.—Reductions in employment were shown in this group on April 1, 200 persons being released from the working forces of the 104 co-operating establishments, which employed 11,918 workers. The decrease was chiefly reported in tobacco factories in Quebec. Considerable improvement had been registered on the corresponding date last year, but the index number then was almost four points lower.

Clay, Glass and Stone Products.—Further general increases in personnel were noted in 110 building material plants, which employed 9,229 workers, as compared with 8,864 in their last report. This increase was smaller than that indicated on the corresponding date a year ago, but the situation then was not quite so favourable.

Electric Current.—Ninety-one producers of electric current reported 11,896 persons in their employ, or 291 more than at the beginning of March. Quebec and Ontario registered most of the increase. On April 1, 1926, the tendency was downward and the index number then was between seven and eight points lower.

Iron and Steel Products.—Statistics were received from 645 manufacturers in this group, whose staffs were enlarged by 1,564 employees to 131,175 at the beginning of April. There were considerable losses in automobile factories, owing to a temporary cut in produc-

tion, but offsetting gains were noted in railway car shops, rolling and forging mills, general machinery, structural iron and steel and some other branches of this industry. Improvement was shown in all provinces except Ontario, that in Quebec and the Maritime Provinces being most pronounced. Although greater expansion had been indicated on the corresponding date last year, the index number was several points lower than on the date under review.

Non-Ferrous Metal Products.—Returns tabulated from 106 manufacturers in this group showed that they employed 16,287 persons, as against 15,564 on March 1. Most of this increase took place in Quebec. The level of employment was considerably higher than on the corresponding date last year, when smaller gains were recorded.

Mineral Products.—Expansion in employment was reported in these industries at the beginning of April, 331 workers having been added to the payrolls of the 78 co-operating establishments, which employed 9,730 at the beginning of April. Gas, oil and some other mineral product works shared in the advance, which was chiefly confined to Quebec. A minor reduction in employment had been noted on the corresponding date last year, the index number then was a good deal lower.

Logging

Continued and greater seasonal losses were shown in logging camps, 229 of which reduced their payrolls from 32,114 men on March 1 to 20,028 on the date under review. The most extensive decreases were in Quebec and Ontario. Somewhat larger contractions were reported on April 1, 1926, when employment was in rather smaller volume.

Mining

Coal.—In contrast with the shrinkage in employment shown at the beginning of April last year, there was a moderately upward movement in coal mines on the date under review. Data were received from 89 operators, whose staffs stood at 26,661 workers, as against 26,498 in their last report. The index number was ten points higher than in spring last year. Considerable improvement was indicated in the Maritime Provinces, but there were seasonal declines in Alberta.

Metallic Ores.—Reports were received from 48 firms in this group employing 11,518 workers, or 347 more than at the beginning of March. The most extensive gains were in Quebec and Ontario. Minor losses had taken place at the beginning of April, 1926, when the index number was 137.4, as compared with 154.1 on the date under review.

Non-Metallic Minerals, other than Coal.—Continued improvement was reported in quarries and other industries coming under this heading; 66 firms employed 5,946 workers, while at the beginning of March they had 5,783. Greater advances were indicated by the 66 employers furnishing statistics on the corresponding date last year, but the situation then was not so favourable.

Communication

According to information received from 188 communication companies and branches, they enlarged their staffs by 474 persons to 24,717 on April 1. The situation was better than in the spring of any of the other years of the record in most of which much smaller increases were indicated. Quebec and Ontario reported the greatest gains.

Transportation

Street Railway and Cartage.—Employment increased in local transportation, 250 workers having been added to the payrolls of the 113 co-operating employers, who had 19,247 persons on payroll. Ontario registered the most marked improvement. Much smaller gains were recorded on the corresponding date last year, when the index number was two points lower.

Steam Railway.—Statistics were tabulated from 101 concerns and divisional superintendents employing 75,242 persons, as against 75,531 in the preceding month. This reduction is very similar to that reported on April 1 a year ago, but the level of employment then was lower. The most extensive curtailment took place in the Maritime Provinces, while in the Prairie Province improvement was indicated.

Shipping and Stevedoring.—Seasonal advances were recorded in shipping and longshore work at the beginning of April, but the gains were rather less pronounced than on the corresponding date last year, and the index number then was higher. Forty-five employers in this group had 11,043 workers, as against 10,439 in their last report. Ports in Quebec, Ontario and British Columbia afforded increased employment.

Construction and Maintenance

Building.—Employment in building construction continued at a high level, although the additions to staffs were not so large as on April 1, 1926, when the index number was over eleven points lower. Statements were compiled from 388 contractors with 28,564 persons in their employ, or nearly 1,000 more than in their last report. A large share of the improvement was in Ontario and British Columbia, while the tendency in the Prairie Provinces was retrogressive.

Highway.—Seasonal increases that involved a larger number of workers than at the commencement of April in other years of the record were noted on highway construction and maintenance; 95 contractors employed 4,074 workers, as compared with 3,296 in the preceding month. Practically all the expansion was in Ontario and British Columbia. Employment was in considerably greater volume than on April 1, 1926.

Railway.—As is customary at the beginning of April, there was a falling off in employment in the construction departments of the railways. Additions to staffs were made in the Maritime Provinces and British Columbia, but elsewhere there were declines, those in Ontario and Quebec being most extensive. The working forces of the 33 co-operating contractors and divisional superintendents aggregated 29,184 men, whereas in the preceding month they had 30,491 employees. The index number was lower than on the corresponding date a year ago.

Services

This group showed moderate gains, according to 171 firms with 14,588 employees, compared with 14,364 in the preceding month. Laundries registered the greatest improvement, mainly in Ontario. The trend was also upward at the beginning of April, 1926, when employment was less than on the date under review.

Trade

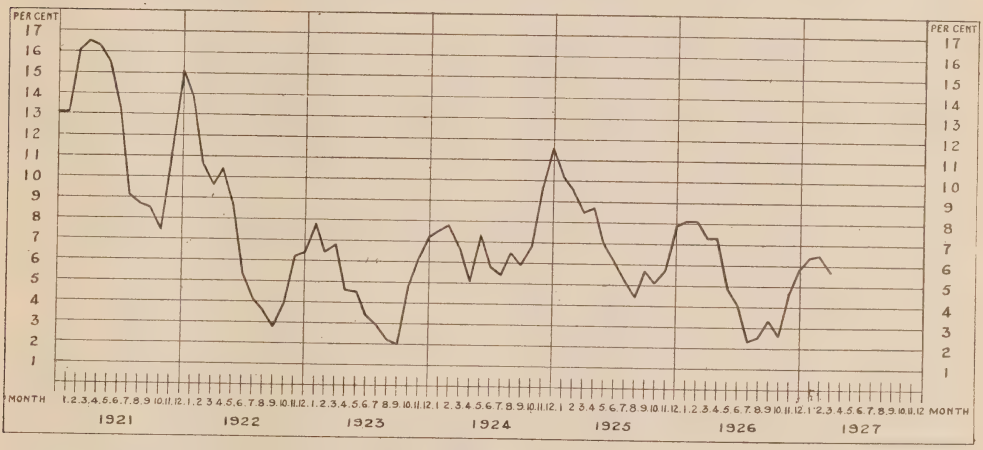
There was an increase of 642 persons in the forces of the 581 wholesale and retail establishments making returns, which reported 61,194 workers on April 1. A slight falling off had been noted on the same date a year ago, and the index number then, as well as at the beginning of April in every other year since the record was instituted in 1920, was lower than on the date under review. Improvement was noted in all except the Maritime Provinces.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on April 1,1927.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF MARCH, 1927

THE term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

At the end of March, 1927, unemployment among local trade unions showed a downward trend in comparison with that of the previous month, as was indicated by the returns tabulated from 1,509 labour organizations, comprising a membership of 156,664 persons. Of these 8,975, or a percentage of 5.7, were out of work, as compared with percentages of 6.5 in February and 7.3 in March last year. The improvement in the situation at the close of March was the first to be recorded since October last year, and was due to a partial recovery from the winter period of slackness in many of the trades and industries. In Nova Scotia, owing to the closing of one of the collieries, a large number of miners were thrown out of work, which materially affected the total of unemployed for the province but the gains in employment in the other provinces, with the exception of Alberta where slight reductions were reported, more than offset these contractions. The Province of Ontario registered the most noteworthy improvement, especially in the building and construction trades and in the manufacturing industries, although the situation



in these trades and industries generally throughout Canada was good. In comparison with the returns for March last year all provinces with the exception of Quebec and British Columbia reported a higher level of employment. In Quebec the situation remained stationary, while the reductions in British Columbia were slight.

A separate tabulation is made of trade union conditions in the largest city in each province, except Prince Edward Island. During March Halifax, although reporting better conditions than in February, still had 8.6 per cent of unemployed members, which was the largest percentage of idleness in the various cities used for comparison. Vancouver, Montreal and Winnipeg followed each other fairly closely, with percentages of 7.0, 6.7 and 6.5 respectively. In Edmonton, as in February, the most favourable situation prevailed where 3.3 per cent of the members were out of work.

The accompanying chart gives the trend of unemployment by months from 1921 to date. The curve during the first two months of the present year projected upward from that at the end of December, but in March changed slightly in an opposite direction, indicating a somewhat better situation. The level throughout the three months, however, was lower than that attained during the same period in 1926.

In the manufacturing industries, where reports were tabulated from 414 unions with 43,509 persons, the unemployment percentage was 5.2 at the end of March, as compared with 6.8 in February. The situation throughout the majority of the trades was more favourable, the most substantial gain being reported among iron and steel workers and printing tradesmen. Garment workers registered the same amount of inactivity as in February, but among the cigar and tobacco, and glass workers unions, whose combined membership and unemployment was not sufficient to particularly affect the total percentage of idleness in the manufacturing industries, unemployment was quite prevalent. The level of unemployment in the manufacturing industries, as a whole, was the same during March as in the corresponding month last year, the percentage out of work in both cases standing at 5.2. Fluctuations, however, occurred, in the various trades and industries, but the changes were not particularly outstanding.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

From the coal mining regions reports were received from 25 unions, with 11,649 members, 11.3 per cent of whom were idle in March, as compared with a percentage of 1.6 in February. As mentioned previously in this article, the Nova Scotia coal mines reported considerable idleness owing to a shutdown in one of the collieries. In addition, some short time was registered in the same province. While somewhat similar conditions prevailed in Nova Scotia during March last year still the number unemployed in March this year was not so great. In Alberta unemployment was in slightly greater volume during March than in either the previous month or March last year, but in British Columbia there was only a nominal change for the better in both comparisons. Quarry workers in Nova Scotia were not so slack as in February, and reported

the same percentage of improvement over March last year.

Owing to the opening up of spring activities in building and construction less unemployment was reported among the tradesmen than in February. Returns were tabulated from 168 unions of building tradesmen with 16,823 members, 3,148, or a percentage of 18.7 of whom were idle, in comparison with 24.3 per cent in February. The most noteworthy gains in employment occurred among bricklayers, masons and plasterers, granite and stonecutters, painters, decorators and paperhangers, hod carriers and building labourers, and steam shovel and dredgemen, and improvement of lesser magnitude was indicated among the remaining tradesmen with the exception of tile layers, lathers and roofers, who were quite slack. The construction trades, as a whole, showed a better situation this year than last, when in March, 1926, the percentage out of work stood at 20.9. In this comparison granite and stonecutters reported the greatest increase in activity, and steam shovel and dredgemen, bridge and structural iron workers, electrical workers, painters, decorators and paperhangers, plumbers and steamfitters, and hod carriers and building labourers also were afforded more work. Tile layers, lathers and roofers, on the other hand, were much slacker, and employment for bricklayers, masons and plasterers, and carpenters and joiners also declined.

In the transportation industry reports were tabulated from 615 unions with a membership of 56,889 persons, 2.9 per cent of whom were out of work as compared with 4.0 per cent in February. The situation for navigation workers was much improved as compared with February, especially in the province of British Columbia. In the steam railway division where the returns constitute over 80 per cent of the entire group membership reporting, a slightly greater volume of employment was afforded, but in the street and electric railway division there was no change in the percentage unemployed. The navigation, steam, and street and electric railway divisions all contributed their quota of gain over March last year when the percentage for transportation, as a whole, was 4.5.

A separate tabulation is made for longshore workers, reports having been received from 13 organizations with 6,452 members, 949 of whom were unemployed, or a percentage of 14.7, as compared with percentages of 8.6 in February and 10.5 in March last year.

The public employment group with 131 unions reporting a membership of 12,116 persons indicated greater activity during March than in either the previous month or March last year. This was due in both comparisons to the better situation existing among civic employees.

In the division of miscellaneous trades reports were received from 100 organizations, with 5,664 members, 314 of whom were idle, or a percentage of 5.5, as compared with 6.5 per cent in February and 5.5 per cent in March last year. In the former comparison hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen all reported somewhat more favourable conditions, while in the latter employment for barbers and stationary engineers advanced, but hotel and restaurant and theatre and stage employees were less active.

Among fishermen there was no unemployment during March, as compared with percentages of 4.1 in February and 1.3 in March last year. Lumber workers and loggers were also fully engaged as in February, but in March last year 19.4 per cent of their members were idle.

Table I on this page summarizes the returns by provinces for March of each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and table II on page 547 represents the percentages of unemployment reported in the different groups of industries for the same months.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

EMPLOYMENT OFFICE REPORTS FOR MARCH, 1927

DURING the month of March, 1927, the volume of business as indicated by the average daily placements effected by the offices of the Employment Service of Canada was nearly 5 per cent greater than that transacted during the previous month, but was over 10 per cent less than that recorded during March, 1926. In the first comparison all groups showed gains except logging, the most noteworthy being in farming, manufacturing and services, while the decline from March of last year was mainly attributable to reduction in farm placements, the change in other groups being small.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - Placements o—o—o—o—o—o

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work, registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies in relation to applications rose steadily throughout the month, while the curve of placements in relation to applications declined somewhat during the first half of the month, recovering slightly during the latter half of the period under review; but in both instances the levels were several points lower than those attained at the close of March, 1926. The ratio of vacancies to each 100 applications was 67.5 and 69.4 during the first and second half of March, in contrast with the ratio of 69.1 and 77.6 during the same period of 1926. The ratios of placements to each 100 applications during the periods under review were 60.2 and 61.4 as compared with 63.0 and with 66.8 during the corresponding month last year.

A summary of the reports from the offices showed that the average number of applications reported during the first half of March, 1927, was 1,293 daily, as compared with 1,234 during the preceding period, and with 1,295 daily in the corresponding period of 1926. Applications for work during the latter half of the month registered 1,371 daily, in contrast with 1,488 daily during the latter half of March a year ago.

Employers notified the Service of a daily average of 873 vacancies during the first half, and 952 during the latter half of the month under review, as compared with a daily average of 895 and 1,156 vacancies during the month of March, 1926. Vacancies offered to

*24 placements effected by offices since closed.

the Service during the latter half of February this year averaged 819 daily.

The Service effected a daily average of 779 placements during the first half of March, of which 495 were in regular employment and 284 in work of one week's duration or less, as compared with a total average placement during the preceding period of 778 daily, and with 816 daily during the first half of March, 1926. During the latter half of the month under review placements averaged 841 daily (559 regular and 282 casual), as compared with an average of 995 daily during the corresponding period a year ago.

During the month of March, 1927, the offices of the Service referred 23,370 persons to vacancies, and effected a total of 21,898 placements. Of these the placements in regular employment numbered 14,260, of which 10,404 were of men and 3,856 were of women, while the placements in casual work totalled 7,638. The number of vacancies reported by employers numbered 15,329 for men and 9,328 for women, a total of 24,657, while the applications for work totalled 35,993, of which 25,133 were from men and 10,860 from women.

The following table gives the placements to date in the offices of the Employment Service of Canada:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927 (3 months)	40,616	21,226	61,842

Nova Scotia

During March orders received at employment offices in Nova Scotia called for over 14 per cent more workers than in the preceding month, and for nearly 6 per cent more than during the corresponding month last year. Placements were nearly 10 per cent higher than in February, and over 8 per cent in excess of March, 1926. There were increased placements over March of last year in all industrial groups except logging, farming and trade. Placements by industrial groups included: manufacturing, 85; logging, 52; construction and maintenance, 60; trade, 53; and services, 340, of which 249 were of household workers. During the month 143 men and 76 women were placed in regular employment.

New Brunswick

Orders listed at offices in New Brunswick during March called for nearly 7 per cent more workers than in February, but nearly 31 per cent below March last year. Placements during the month under review were nearly 9 per cent higher than in the preceding month, but nearly 29 per cent lower than in the corresponding month in 1926. The decline from last year was general, all groups except trade showing fewer placements in March than in the same month of 1926. Of the 496 placements effected during the month 381 were in services, of which 279 were of household workers. Placements in regular employment numbered 69 of men and 90 of women.

Quebec

Opportunities for employment as indicated by orders received at employment offices in the Province of Quebec during March were over 15 per cent better than in the preceding month, but over 6 per cent less favourable than in the corresponding month last year. Placements were nearly 15 per cent higher than in February, and nearly 8 per cent in excess of March, 1926. Increased placements in the logging industry were responsible for the gains over last year, offset in part by reduced placements in the construction group. The changes in the other divisions were small. Industrial groups in which most of the placements were effected during the month were: manufacturing, 112; logging, 392; construction and maintenance, 428; and services, 537, of which 394 were of household workers. During the month 930 men and 507 women were placed in regular employment.

Ontario

There was an increase of nearly 15 per cent in the number of positions offered through offices in Ontario during March when compared with the preceding month, but a decline of less than one per cent in comparison with the corresponding month last year. Placements were over 7 per cent higher than in February, but declined more than 3 per cent from March, 1926. Reduced placements in the logging industry were mainly responsible for the decline from last year, although minor reductions were shown in other groups. The most substantial gain was in the manufacturing industries. Placements by industrial groups included: manufacturing, 1,500; logging, 929; farming, 898; transportation, 202; construction and maintenance, 1,723; trade, 353; and services, 3,113, of which 2,121 were of house-

hold workers. There were 4,203 men and 1,326 women placed in regular employment during the month.

Manitoba

Employment opportunities as indicated by orders listed at offices in Manitoba during March were over 17 per cent better than in the preceding month, but over 3 per cent less favourable than in the corresponding month last year. There was an increase of over 16 per cent in placements when compared with February, but a decline of nearly 3 per cent in comparison with March, 1926. Fewer placements in the logging and farming industries were responsible for the reduction from last year, as the changes in other groups were small. Industrial groups in which most of the placements were made during the month included: manufacturing, 112; logging, 235; farming, 993; construction and maintenance, 90; trade, 178; and services, 1,551, of which 1,218 were of household workers. Placements in regular employment numbered 1,308 of men and 644 of women.

Saskatchewan

During the month of March positions through employment offices in Saskatchewan were 54 per cent higher than in February, but nearly 26 per cent less than in March, 1926. Placements were nearly 40 per cent higher than in the month preceding, but over 20 per cent less than in March last year. Industrial groups except transportation, construction and maintenance and trade showed reduced placements from last year, those in the farming industry being the most pronounced. Placements by industrial divisions included: farming, 1,163; transportation, 98; construction and maintenance, 187; and services, 795, of which 506 were of household workers.

Alberta

There was an increase of nearly 26 per cent in the number of positions offered through offices in Alberta during March when compared with the preceding month, but a decline of nearly 27 per cent in comparison with the corresponding month last year. Placements were nearly 20 per cent higher than in February, but nearly 27 per cent less than in March, 1926. All industrial groups, except logging and transportation, participated in the reductions in placements from last year, those in farming being the most pronounced. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 235; logging, 155; farming, 871; construction and maintenance, 189; trade, 62, and services, 662, of which 497 were of household workers. During the month 1,371 men and 385 women were placed in regular employment.

British Columbia

The demand for workers as indicated by orders listed at offices in British Columbia during March was over 44 per cent above the preceding month, but over 23 per cent below the corresponding month last year. Placements were nearly 53 per cent higher than in February, but nearly 24 per cent lower than in March, 1926. All industrial groups except mining and trade showed reductions in placements when compared with March last year, those in construction and maintenance being the largest. Placements by industrial divisions included: manufacturing, 378; logging, 267; farming, 263; mining, 100; transportation, 111; construction and maintenance, 406; trade, 131; and services, 872, of which 502 were of household workers. Placements in regular employment during the month numbered 1,133 of men and 322 of women.

Movement of Labour

During March, 1927, the offices of the Employment Service of Canada made 14,260 placements in regular employment of which 8,225 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,504 were granted the Employment Service reduced transportation rate, 940 going to points within the same province as the despatching office and 564 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The Quebec offices issued reduced rate certificates to 158 bushmen, 53 of whom travelled to points within the province and 105 to outside points. The transfers outside the province were all effected by the Hull office which despatched 63 bushmen to employment around North Bay and 42 bushmen to the Sudbury district. The 53 provincial transfers were from the Quebec city office to points within its own zone.

Those benefiting by the reduced rate in Ontario numbered 247, of whom 217 went to provincial points and 30 to other provinces. Within the province 156 of the transfers were

for bushmen, the majority of whom travelled to employment in the Fort William and Port Arthur zones. From North Bay 6 derrick runners, one pulp worker, one railway construction labourer, one fireman, one engineer, one carpenter and 11 mill construction labourers were sent to Timmins, 2 nursery men and 2 construction labourers to Toronto and one mill hand to Peterborough, while from Sudbury one labourer was transferred to Sault Ste. Marie and 5 teamsters were sent to the Sudbury zone. Fourteen building construction labourers, 2 miners and 2 farm labourers were despatched from Port Arthur and 3 building construction labourers from Fort William to points within their respective zones. Peterborough received one die maker from London, North Bay one cordwood cutter from Kitchener, Oshawa one die maker from Windsor, Sudbury one engineer and Timmins 3 construction labourers from Pembroke. Of those going outside the province Port Arthur shipped one farm labourer to Regina, North Bay 12 bushmen, one miner and one construction labourer, and Sudbury 15 bushmen to points in the Hull zone.

Of the 608 reduced rate certificates issued by Manitoba offices 301 were to persons going to points within the province and 307 to other provinces. Of the former, Winnipeg despatched 222 farm hands, 37 female farm workers, 3 hotel workers, one motor mechanic and 5 female cooks to the Brandon zone, 2 farm workers, one camp cook and one kitchen worker to Dauphin, and 24 farm labourers, 2 farm generals and one female hotel worker within its own zone. In addition Dauphin sent 2 bushmen within its zone. The transfers to other provinces were all from the Winnipeg office, including one practical nurse, and one female hotel worker going to Regina, 2 female hotel workers and one kitchen worker to Estevan, one cook and one brick washer to Saskatoon, one greenhouse man to Moose Jaw, one hotel general to Weyburn and 115 farm labourers to various Saskatchewan points. Two rock drillers and one farm labourer travelled to employment in the Edmonton zone and one farm labourer to the Calgary zone. The remainder of those transferred outside the province were for the Port Arthur zone and included 161 bushmen, 6 cooks, 4 farm hands, 3 female hotel workers, 2 machinists, one pipe fitter, one store girl and one cookee.

In Saskatchewan the 100 certificates issued were all for provincial points. The movement was primarily toward the agricultural districts of the province, the transfers for farm workers numbering 83, the majority of whom were for points near Saskatoon and Moose Jaw. In addition the Prince Albert zone received one labourer and one bushman from the Regina and Prince Albert offices respectively and the remaining 15 were household and hotel workers going to various parts of the province.

In Alberta 196 persons were granted reduced transportation, 161 of whom were sent to employment within the province and 35 to other provinces. Provincially Edmonton transferred 48 farm hands, 27 bushmen, 22 mill hands, 5 sawyers, 6 miners, one carpenter, 4 cooks, one engineer, one labourer, one shoe repairer, one waitress, one handyman, and one housekeeper within its own zone, 4 farm labourers and one housekeeper within the Calgary zone, and 2 farm labourers to Drumheller, and Calgary despatched 15 farm hands and one cook to Drumheller, 4 farm labourers to Edmonton, 2 cooks and one farm labourer to Lethbridge, and 3 bushmen, 8 farm workers and one housekeeper to points within the Calgary zone. The interprovincial transfers from the Edmonton office included 26 farm labourers and one maid for the Saskatoon zone and 4 farm labourers for the North Battleford zone and from Calgary one cook and one cookee for Cranbrook, and one farm hand for each of the Revelstoke and Saskatoon zones.

British Columbia certificates numbered 195, of which 108 were provincial and 87 interprovincial. The movement within the province from Vancouver included 6 farm labourers, 7 miners, 4 cooks, one engineer, 7 sawyers, 2 pole makers, 4 loggers, one foreman, one hoisting engineer, one flunkey and one blacksmith going to Kamloops, 5 miners, 4 draftsmen, 4 flunkies, 8 farm hands and 3 carpenters going to Penticton, 5 miners and one cook to Revelstoke, 3 bricklayers to Nelson, one millwright to Prince George and 7 miners, 2 cooks and one hoisting man to points within the Vancouver zone. Nelson transferred 9 bushmen, Prince George 12 bushmen and 5 sawyers, and Prince Rupert one bushman, all to points within their respective zones, and from Cranbrook, Kamloops received 2 lumber workers. Interprovincially all the transfers were for farm workers, 37 of whom went to employment within the province of Alberta, 46 to Saskatchewan points and 4 to Manitoba, the majority of whom were despatched by the Vancouver office.

Of the 1,504 persons who benefited by the Employment Service reduced rate, 803 were carried by the Canadian National Railways, 658 by the Canadian Pacific Railway, 35 by the Temiskaming and Northern Ontario Railway and 8 by the Pacific Great Eastern Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1927

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter January to March, 1927, showed little change when a comparison is made with the records of the corresponding period in 1926, as there was but a slight decrease in the vacancies offered, and a nominal gain in placements effected, the change being less than 1 per cent in both comparisons. The only marked increase over last year in vacancies was in the logging industry, with minor gains recorded in manufacturing, mining and trade, which were more than offset, however, by declines in all other groups. Logging also showed the greatest expansion in placements. Quebec, Ontario and Manitoba showed nominal increases, both in vacancies offered and in placements effected, while Nova Scotia and Saskatchewan registered slight gains in placements alone, New Brunswick, Alberta and British Columbia recording contractions in both instances. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period January to March, 1927.

From the chart on page 548 which accompanies the article on the work of the employment offices for the month of March, it will be seen that the curve representing the ratio of vacancies to applications has, with the exception of a sharp decline during the first half of January and a minor decline during the latter half of February, shown an upward trend throughout the period, the curve of placements in relation to applications also showing fluctuations although in a lesser degree, the highest points in the latter being attained in the first half of January and of February. The peaks in both instances however were not so high, nor did the curves fall so low as those shown during the corresponding quarter of 1926. During the period of January to March, 1927, there was a ratio of 66.9 vacancies and of 61.0 placements for each 100 applications for employment, as compared with 66.3 vacancies and 59.9 placements during the corresponding period of a year ago. The average number of applications registered daily during the quarter under review was 1,334, of positions offered 892, and of placements effected 814, in contrast with a daily average of 1,357 applications, 899 vacancies, and 812 placements in regular and casual employment during the first quarter of 1926.

During the three months January to March, 1927, the offices of the Service reported that they had made 65,954 references to positions, and had effected a total of 61,842 placements, of which 40,616 were in regular employment and 21,226 in casual work. Of the placements in regular employment 30,889 were of men and 9,727 of women, while casual work was found for 11,376 men and 9,850 women. A comparison with the same period of 1926 shows that 61,687 placements were then made, of which 40,435 were in regular employment and 21,252 in casual work. Applications for employment during the period under review were received from 71,542 men and 29,804 women, a total of 101,346 in contrast with a registration of 103,066 during the same period of 1926. Employers notified the Service during the first quarter of 1927 of 67,767 positions, of which 44,006 were for men and 23,761 for women as compared with 68,324 opportunities for work offered during the corresponding period of 1926.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of March, 1927.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—CERTAIN EMPLOYING BOOK AND JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 604.

Agreement to be in effect from October 31, 1926 until November 1, 1929. Sixty days' notice of change to be given.

A standing committee shall be formed of two from each party, and to it shall be referred questions as to scale of prices, construction to be put on clauses of agreement, or alleged violation, or questions of difference. Decision of board shall be final and binding on both parties. Local union laws not affecting wages, hours or working conditions and laws of the International Union shall not be subject to arbitration.

Hours, eight per day in book and job offices. Five days a week. Four hours on Saturday. Work after regular working hours, overtime rates. Hours per night, seven. Work after regular working hours, overtime rates.

Overtime up to three hours in one shift, time and one-half. Thereafter, double time. Holiday work, Dominion Day, Labour Day and Christmas Day, double time; Good Friday, Victoria Day, Thanksgiving Day, New Year's Day and Civic Holidays, time and one-half. Sundays, double time, except work done by a night staff in job offices.

The foreman shall have full control of the employment and discharge of journeymen for cause.

Number of apprentices: one for two to seven men; two for eight to fifteen men; three for 16 to 25 men; four for twenty-six to thirty-five men; five for thirty-six and over. Apprentices shall be not less than sixteen years of age. They shall be subject to examination; they shall be registered and serve five years. During last three years, they shall enroll as students in the union course of lessons in printing.

Scale per week: start, $10; after six months, $11.50; after one year, $13; after one year and six months, $14.50; after two years, $16; after two years and six months, $17.50; after three years, half of journeymen's scale.

The local union shall provide for the appointment of a committee on apprentices.

No more than one learner, exclusive of apprentices in their last year, shall be employed in any office at one time. No learner shall work more than number of hours provided for on the shift. If no journeymen are available apprentice shall be allowed to work overtime and shall receive compensation at overtime rates.

Rates of wages for beginners on machines: first five weeks, two-fifths of journeymen's scale; next five weeks, three-fifths; next five week, four-fifths. Thereafter learner may be granted extra time to attain efficiency up to three months.

Wages per hour, for all journeymen employed in job offices, day work (eight hours per day, four hours on Saturday) from November 1, 1926 to October 31, 1927, 96 cents; from November 1, 1927 to October 31, 1928, 98 cents; from November 1, 1928 to October 31, 1929, $1. Night work (seven hours per night, six nights per week) for three periods as above, $1.02⅔; $1.04⅔; and $1.06⅔. Split shift, night scale of wages; same number of hours as for night work.

Construction: Building and Structures

TORONTO, ONTARIO.—THE MASONS AND GENERAL CONTRACTORS' AND GENERAL CONTRACTORS' SECTIONS AFFILIATED WITH THE BUILDERS' EXCHANGE, AND BRICKLAYERS' UNION No. 2, AND STONEMASONS' UNION No. 26.

Agreement to be in effect from January 1, 1927, until December 31, 1928, with three months notice of change. New agreement to be signed by November 1, 1928.

Wages per hour, from January 1, to April 30, $1.12½; from May 1 to December 31, $1.25.

Hours, eight per day or night, with one hour for meals midway in the shift. Overtime, time and one-half; Saturday afternoon, Sundays and holidays, double time.

The union shall not order any strikes against the parties to the agreement, nor shall members leave work before matter is brought before the joint arbitration committee. No members shall leave work to take part in a sympathetic strike except under direct authority of the executive of the union.

Places shall be provided for eating lunches and keeping tools.

Violations of the agreement shall be dealt with by the joint arbitration committee.

Men paid off shall report their requirements of work to the union.

No members of the union shall be allowed to lay brick or cut or lay stone for any person who employs non-union stonemasons or bricklayers.

A joint arbitration committee of three from each party shall meet at least once every three months.

Minimum wage rate for apprentices per hour: first year, 25 cents; second year, 35 cents; third year, 45 cents; fourth year, 60 cents.

Regina, Saskatchewan.—Association of Construction Industries of Regina, and Bricklayers and Masons' Union, No. 1.

Agreement to be in effect from May 1, 1927, until April 30, 1928, and from year to year or until either side has given three months' notice.

There shall be a joint arbitration committee of three from each party with power to enter into an agreement arranging conditions of the trade. Questions to be settled by this committee must be referred to it without having been acted upon by either association. Pending reference of any question to the committee, work shall proceed without stoppage, except in violation of the agreement.

Members may work only on work where union men are employed for masonry and tile setting.

Hours: eight per day; four hours on Saturday. Beyond five miles from the city, work on Saturday afternoons shall be optional.

Overtime (emergency only) until 5 p.m., time and one-half; thereafter, double time. No work on Labour Day; work on New Year's Day, Dominion Day and Christmas Day, double time.

Wages per hour: journeymen, $1.35. Foremen, 10 cents extra per hour.

If travelling time is paid, only time during work hours is allowed, and paid at regular rate. For travelling at night, sleeper only to be provided. Men working out of town shall have transportation paid, and lodging or board if job lasts two weeks or under.

A member told to come to work and not put to work shall receive four hours' pay.

Members shall not go on a sympathetic strike unless ordered to do so by the International Headquarters.

Transportation and Public Utilities: Local Transportation

Saskatoon, Saskatchewan.—Saskatoon Cartage and Warehouse Company and Teamsters, Truck Drivers and Helpers.

Agreement to be in effect from April 4, 1927, until April 4, 1928, with thirty days' notice of termination. This agreement terminated a strike mentioned in "Strikes and Lockouts" in this issue.

Wages per day: teamsters and truck drivers, $4.50. Holidays, time and one-half. Sunday rate for barn work to be same as other days.

Men on furniture vans (with certain exceptions), 55 cents per hour. Extra time on vans to apply only to house removals.

Overtime: 65 cents per hour. No overtime to be paid at sheds until the new shed is erected.

BUILDING PERMITS ISSUED IN CANADA DURING MARCH, 1927

ACCORDING to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 63 cities during March was $11,641,427; this was an increase of $3,862,875, or 49.7 per cent over the February total of $7,778,552, and of $1,006,936, or 9.5 per cent, as compared with the aggregate of $10,634,491 reported for the corresponding month in 1926. The March, 1927, total was the highest for that month in the record of the 63 cities. Building costs, as shown by the Bureau's index number of wholesale prices of building materials, continued to be considerably lower than in any other year of the record.

Some 50 cities furnished detailed statistics, showing that they had granted over 1,300 permits for dwellings valued in excess of $5,400,000 and for some 2,500 other buildings estimated to cost approximately $5,600,000. In February, authority was given for the erection of some 750 dwellings and nearly 1,100 other buildings, estimated at approximately $3,300,000 and $4,000,000, respectively.

All provinces reported increases in the building authorized during March as compared with the preceding month. The greatest absolute gain was that of $1,652,881 or 37.6 per cent in Ontario, but larger proportionate increases were shown in the other provinces.

As compared with March, 1926, New Brunswick, Quebec and Alberta recorded decreases, that of $243,227, or 52.9 per cent, in the last named being most pronounced. There were increases in the remaining provinces, Ontario again showing the greatest gain of $1,167,236 or 23.9 per cent.

Of the larger cities, Montreal registered a decline as compared with the preceding month and also as compared with March last year. In Toronto, Winnipeg and Vancouver, on the other hand, there were increases in both comparisons. Of the smaller centres, Halifax, Moncton, Quebec, Shawinigan Falls, Sherbrooke, Three Rivers, Westmount, Guelph, Hamilton, London, Oshawa, Ottawa, Owen Sound, Stratford, St. Catharines, Sarnia, Welland, Windsor, Ford, Riverside, Woodstock, St. Boniface, Regina, Saskatoon, Medicine Hat, Kamloops, New Westminster, Point Grey and Victoria reported higher totals than in either February, 1927, or March, 1926.

Cumulative Record for First Three Months of 1927.—The following table gives the value of the building authorized by 63 cities during March and in the first three months of each year since 1920. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1913 = 100).

Year	Value of permits issued		Average indexes of wholesale prices of building material in first three months
	In March	In first three months	
	$	$	
1927	11,641,427	24,849,278	147·3
1926	10,634,491	22,493,574	152·3
1925	8,631,627	19,981,015	153·8
1924	9,493,620	18,047,999	167·3
1923	9,658,950	19,478,119	164·9
1922	10,615,531	18,680,173	161·1
1921	7,290,589	13,569,512	207·8
1920	8,736,675	18,909,986	208·1

The aggregate for the first three months of this year was thus greater by $2,355,704 or 10.5 per cent than in 1926, the previous high level of the record. The average index number of wholesale prices of building materials continued to be lower than in any other year since 1920.

The accompanying Table gives the value of the building permits issued by 63 cities during March and February, 1927, and March, 1926. The 35 cities for which records are available since 1910 are marked with asterisks.

The "Save the Children Fund International Union" is organizing a world competition for children's drawings to illustrate the Declaration of Geneva, the charter of children's rights formulated by the Union. The competition will be open to children of 14 years old and under throughout the world. National competitions will first be held and later a contest between the winners. Three sets of prizes are offered—(1) for children under 10; (2) for those between 10 and 12; and (3) for those between 12 and 14. This information is given in the *Revue Internationale de l'Enfant* (Geneva), February, 1927, which will publish further details when plans have been made for the national competitions.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. These contracts (Group "A") being awarded in connection with the works of construction contain the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or

teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts in Group "A" (Construction)

Additions and alterations to public building at Chicoutimi, P.Q. Names of contractors, Joseph Gauthier and Fils, registered partners, Chicoutimi, P.Q. Date of contract, April 18, 1927. Amount of contract, $21,500; the following prices to apply for any changes which may be made in the contract. Price per cubic yard for excavation—earth $0.75; price per cubic yard for concrete (not including reinforcement), $13.

Repairs to wharf at Cap à L'Aigle, Charlevoix County, P.Q. Names of contractors, Joseph Beaumont and Philippe Têtu of Montmagny, P.Q. Date of contract, April 20, 1927. Amount of contract, unit prices.

Construction of a public building at Kenogami, P.Q. Names of contractors, Thomas Noël and Joseph Savard of Jonquières and Kenogami, P.Q. Date of contract, April 5, 1927. Amount of contract, $22,200. The following prices to apply for any change which may be made in this contract. Price per cubic yard for excavation, 0.75. Price per cubic yard for concrete, $13.

Repairs to western wharf at Grosse Isle, P.Q. Name of contractors, Ludger Lemieux Limitée, Ste.-Marie de la Beauce, P.Q. Date of contract, April 12, 1927. Amount of contract, unit prices. Approximate expenditure, $6,098.50.

Construction of a wharf in Portage Bay, Lake of the Woods, Kenora, Ont. Name of contractor, G. H. Hudson, Kenora, Ont. Date of contract, April 11, 1927. Amount of contract, $9,928.

Dredging upper end of harbour at Yarmouth, N.S. Name of contractors, Beacon Dredging Company, Limited, Halifax, N.S. Date of contract, April 2, 1927. Amount of contract, Class B, $0.62½ per cubic yard. Approximate expenditure, $45,525.

Department of Railways and Canals

Contract in Group "A" (Construction)

Enlargement of the galleries and towers between the elevator and the shipping berths, installation of two additional belts in these galleries, and two additional shipping legs in the working house, together with additional scales, garners, spouting, electrical appliance and equipment, and alterations to the existing structure and equipment, all for or in connection with the Canadian Government Grain Elevator at Halifax, N.S. Name of contractors, E. G. M. Cape and Company, Montreal, P.Q. Date of contract, April 4, 1927. Amount of contract, $151,550.

Post Office Department

The following is a statement of payments made in April, 1927, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 825 48
Making and repairing rubber stamps, daters, etc.	184 99
Making up and supplying letter carriers' uniforms, etc.	1,243 82
Stamping pads, ink, etc.	37 46
Bag fittings	1,962 50
Letter carriers' satchels	1,370 90

The number of cases of occupational disease notified in France during 1925 included 1,343 cases of lead poisoning (as against 1,249 in 1924) and five cases of mercury poisoning. Of the 1,343 cases of lead poisoning notified, 456 occurred in enamel works, 427 in accumulator factories, 125 in white lead and red lead factories, 176 in lead and other metal foundries and lead rolling mills, and 52 in the painting of buildings, carriage work and wagons, and of ships with red lead.

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods, for an average family of five in terms of the average retail prices in some sixty cities declined to $10.80 at the beginning of April, as compared with $11.05 for March; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for June, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. The decline was due mainly to a seasonal fall in the price of eggs, while less important declines occurred in the prices of potatoes, bacon, lard, milk, flour, evaporated apples and prunes. Slight advances occurred in the prices of beef, mutton, butter and tea. Including the cost of fuel and rent with that of foods, the total budget averaged $21.02 at the beginning of April, as compared with $21.29 for March; $21.64 for April, 1926; $20.82 for April, 1925; $20.58 for April, 1924; $21.21 for April, 1923; $20.66 for April, 1922; $23.31 for April, 1921; $25.34 for April, 1920; $26.92 for July, 1920 (the peak); $20 for April, 1918; and $14.32 for April, 1914. Fuel was slightly lower, due to declines in the prices of coal and wood in some localities. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities was again slightly lower at 148.5 for April, as compared with 148.9 for March; 160.6 for April, 1926; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); 198.1 for April, 1919; and 195.0 for April, 1918. Forty-one prices quotations were lower, forty-one were higher and one hundred and fifty-four were unchanged.

In the grouping according to chief component materials four of the eight main groups declined, two advanced, while two were practically unchanged. The groups which declined were: the Animals and their Products group, due to lower prices for eggs and butter; the Iron and Its Products group, because of lower prices for steel billets; the Non-Metallic Minerals and their Products group, because of a decline in the price of anthracite coal; and the Wood, Wood Products and Paper group. The Vegetables and their Products group and the Textile and Textile Products group advanced, the former due to higher prices for grains, flour, bread and potatoes, and the latter due to higher prices for raw cotton. The Non-Ferrous Metals group and the Chemicals and Allied Products group were practically unchanged.

In the grouping according to purpose consumers' goods declined, higher levels for flour, bread, fresh meat and vegetables being more than offset by lower prices for butter, eggs, tea, fruit and coal. Producers' goods advanced. Coal and materials for the metal working industries were lower, while materials for the textile and clothing industries, for the fur industry, for the meat packing industries and for milling and other industries advanced.

In the grouping according to origin raw or partly manufactured goods declined, increases in grains, cattle, sheep, fresh meat, hides, vegetables, cotton, copper and silver being more than offset by declines in the prices of eggs, hogs, tea, coal, lead, tin, zinc, steel billets and wood pulp. Fully or chiefly manufactured goods also declined, slight increases in the prices of flour and bread being offset by declines in the prices of butter, smoked meats and non-ferrous metal products. Domestic farm products advanced. Articles of forest origin and articles of mineral origin were slightly lower, while articles of marine origin were unchanged.

Professor Michell's index number of wholesale prices of forty articles, with prices during 1900-1909 as 100, was fractionally lower at 163.8 for April, as compared with 164 for March, 177.8 for April, 1926; 268.4 for April, 1920; and 115.1 for April, 1914. The index of twenty foods rose slightly, while that of twenty manufacturers' goods was somewhat lower. In the former group beef, flour and eggs advanced, while butter, sugar and potatoes declined, and in the latter group cotton and silver advanced, while lead, tin, coal oil and rubber declined.

The Canadian Bank of Commerce index of wholesale prices of about 80 commodities, based upon prices in 1923, and weighted according to the physical volume of production

of each commodity included, declined, being 95.14 for April, as compared with 95.57 for March. The Vegetable, Animal and Metal groups declined, while the Textile, Wood and Chemical groups advanced.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE for January on Prices in Canada and in Other Countries, page 9. This table gives figures for June and December each year from 1914 to 1926, inclusive. Figures are now available also for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly figures 1918 to 1926, and monthly figures for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924,

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%. †Revised.

156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices continued to advance, sirloin steak averaging 29.8 cents per pound in April, as compared with 29 cents in March; rib roast 22.5 cents per pound in April and 22 cents in March; and shoulder roast 16.5 cents per pound in April and 16.1 cents in March. Prices averaged higher in Ontario and the Western provicnes, but in Quebec and the Maritime Provinces declines occurred in most localities. Veal was unchanged in the average, increases in the Eastern provinces being offset by declines in the Western. Mutton advanced from an average of 29.2 cents per pound in March to 29.7 cents in April. Breakfast bacon was slightly lower at 39.6 cents per pound in the average. In fresh fish cod steak declined, while halibut and white fish advanced slightly. Lard was again slightly lower, averaging 22.1 cents per pound, as compared with 22.3 cents in March.

A substantial seasonal decline occurred in the price of eggs, fresh averaging 38 cents per dozen, as compared with 50.9 cents in March, 58.4 cents in February and 66.5 cents in January; while cooking averaged 34.5 cents per dozen in April, 44.7 cents in March, 50.1 cents in February and 52.7 cents in January. Lower prices were reported from practically all localities. Milk averaged 12.1 cents per quart in April. Lower prices were reported from Medicine Hat, Calgary, Lethbridge and Victoria. Butter advanced, dairy averaging 44.1 cents per pound in April, as compared with 43.4 cents in March, and creamery averaging 49.6 cents per pound in April and 48.6 cents in March. Prices in the Western provinces and in the Maritime Provinces showed little change, while in Ontario and Quebec increases were more pronounced. Cheese was slightly higher at an average price of 30.8 cents per pound.

Bread was unchanged at an average price of 7.6 cents per pound. Soda biscuits declined from 18.6 cents per pound in March to 18.3 cents in April. Flour was slightly lower at an average of 5.2 cents per pound. Rolled oats, rice and tapioca were unchanged. Canned vegetables declined slightly, tomatoes averaging 16.1 cents per tin, peas 16.8 cents and corn 16.3 cents. Onions showed a general advance, averaging 6 cents per pound in April, as compared with 5.5 cents in March. Potatoes continued to decline, averaging $1.70 per ninety pounds in April, as compared with $1.84 in March. Lower prices were reported from nearly all localities. Evaporated apples were down from an average of 20 cents per pound in March to 19.7 cents in April. Prunes were also slightly lower, averaging 14.9 cents per pound. Raisins and currants showed little change. Granulated sugar was unchanged, slight increases in some localities being offset by declines in others. Anthracite coal was down in the average from $16.85 per ton in March to $16.67 in April. Lower prices were reported from Truro, Belleville, Oshawa, Toronto, Brantford, Galt, Guelph, Kitchener, London and St. Thomas. Bituminous coal was slightly lower at an average price of $10.28 per ton. Coke was down from $13.40 per ton to $13.29. Hardwood was slightly lower at an average price of $12.13 per cord. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement of wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Higher prices prevailed for the majority of grains during April. The average for No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was $1.45¼ per bushel, as compared with $1.42¾ in March. The low price for the month was $1.42⅞ reached on the 13th, and the high $1.47¼ on the 28th. The continued strong export demand, together with reports of bad weather in the Canadian West, were said to be the cause of the advance. The prices of coarse grains, for the most part, moved in sympathy with wheat prices, western barley being up from 71¼ cents per bushel to 79½ cents; flax seed from $1.89½ per bushel to $1.91½; Ontario barley from 62 cents per bushel to 64 cents; and Ontario peas from $1.45 per bushel to $1.55. Western oats declined from 60½ cents per bushel to 57½ cents, and Ontario oats from 55 cents per bushel to 50¾ cents. Flour followed the trend in wheat and advanced from $7.98 per barrel at Toronto to $8.03. Bread in Toronto advanced from 6⅔ cents per pound in March to 7⅓ cents in April. Raw sugar rose from $4.33⅓ per hundred to $4.36½. Oranges at Montreal declined from $5.75-$6 per case to $5-$5.50. Currants at Toronto were 1 cent per pound lower at 13 cents. Potatoes at Montreal advanced from $1.23¾ per bag to $1.35, and at Toronto from $1.47 per bag to $1.48½. Turnips rose

† December only. § Kind most sold. ‡ For electric light see text.

*The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family, See Text.

**An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent; see text.

March. In dressed beef forequarters advanced from $9.75 per hundred pounds to $10.75, and hindquarters from $14.63 per hundred pounds to $16.50. Mutton was up from 12½ cents per pound to 15 cents. Mess pork declined from $32 per barrel to $31. Finest creamery butter at Montreal declined from 46 cents per pound to 39 cents and at Toronto from 47 cents to 45 cents. The pronounced decline at Montreal was said to be due to the embargo on the export of milk and cream to New York which resulted in increased supplies in Canadian creameries. The price of eggs continued toward lower levels, fresh at Montreal being down from 38-40 cents per dozen to 35-37 cents, and storage at Toronto from 37 cents per dozen to 33 cents. Beef hides advanced from 11-11½ cents per pound to 12-12½ cents. Mink skins declined from $13 per skin to $11, while muskrat advanced from $1.50-$2.20 per skin to $1.70-$2.40. Raw cotton at New York advanced from an average price of 14.3 cents per pound to 14.8 cents, due, it was said, to flood conditions in the Mississippi valley. The low price for the month was 14.3 cents at the beginning and the high 15.35 cents toward the end. Groundwood pulp declined from $28-$30 per ton to $27-$30. In non-ferrous metals copper was slightly higher, being up from $14.55 per cwt. to $14.80. Silver advanced from 54¼ cents per ounce to 56¼ cents. Lead declined from $7.70 per cwt. to $7.45; zinc from $8.27½ per cwt. to $7.95; and tin from 70 cents per pound to 69 cents. Anthracite coal at Toronto was down from $13.02 per ton to $11.62.

Unification of Cost of Living Index Numbers in Italy

The Italian Government recently issued a Decree with the object of unifying the statistics of cost of living for the Kingdom as a whole. The Decree instructs the Central Statistical Institute to bring about the establishment of indices of the cost of living in all municipalities of more than 100,000 inhabitants, and also, where statistical offices are present, in municipalities of more than 50,000 and the chief towns of the provinces.

The Central Statistical Institute and the Ministries of National Economy and Co-operation are instructed to determine the quantity and quality of the articles to be taken into consideration in calculating the index numbers. They are also instructed to take the necessary steps for the compilation of data according to an exact method and uniform criteria. The collection and tabulation of the data is left to the municipalities.

The Decree also provides that no public authority, organization dependent on the State, trade association or public body of any kind placed under the protection, supervision or control of the State, other than the municipalities indicated, may publish indices of the cost of living, even though this has been the practice hitherto.

Provision is made for the formation of special local committees, consisting of the mayor or his representative, a factory inspector, the chief of the Statistical Service of the Chamber of Commerce, and not more than three representatives of the employers' federation and a similar number of representatives of workers' unions, to check the prices reported by the offices, and also the tabulation of the data.

Finally, the Decree provides that the index numbers shall be calculated on the basis of the prices of one month in 1927, to be chosen by the Central Statistical Institute. After a period of five months, the publication of index numbers now carried out by the municipalities, chambers of commerce or other public offices is to be discontinued. The Central Statistical Institute may, by way of exception, authorize certain municipalities to continue to calculate index numbers according to former practice.

The extension of accident insurance in Germany to cover occupational diseases, which was made law by an order issued under the Federal Insurance Code on May 12, 1925, came into force on July 1 of the same year. During the first twelve months of the operation of the order, ended on June 30, 1926, 3,847 cases of alleged occupational disease, affecting 1,807 undertakings employing about 800,000 workers, were reported. The cases which were recognized to be real cases of occupational disease numbered 3,310. If the number of cases reported be taken into account, lead poisoning is easily the most important; but if the proportion of cases cured to cases declared be considered, phosphorus poisoning comes first, followed by X-ray lesions, and then third, but very much behind, by lead poisoning, poisoning by carbon bisulphide and mercury poisoning.

40737—7

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Prices in the various countries continued to show a downward trend.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 140.6 for March, a decline of 1.4 per cent for the month. All foods declined 3.4 per cent, with all groups lower. Non-foods were on the whole almost unchanged, with slight declines in iron and steel, in other metals and minerals, and in miscellaneous articles, and advances in cotton and other textiles. On the base "average for 1924=100," the index number for March was 84.6.

The *Statist* index number (in continuation of Sauerbeck's figures) was 123.6 in March, showing a decline of 0.4 per cent. Food stuffs remained unchanged on the average. Materials declined by 0.6 per cent, owing to lower prices in the minerals section. Textiles showed an improvement but were still far below the level of March, 1926.

The *Economist* index number declined slightly at the end of April to 178.2, on the base 1901-05=100, thus being about 0.6 per cent below the level of a month earlier. There were declines in the groups tea, sugar, etc., minerals, and the miscellaneous group, an advance in textiles due to higher cotton prices, caused by the Mississippi floods, and a slight increase in prices of cereals and meat.

The *Times* index number, on the base 1913=100, was 140.0 at the end of March, a decline of 0.8 per cent for the month. This level is the lowest at any time in the post-war period. Food prices declined 2.6 per cent, all groups falling, the greatest decline being one of 7.6 per cent in meat and fish. Materials rose 0.2 per cent, with an advance of 0.9 per cent in cotton and 4.7 per cent in other textiles, and declines in the remaining groups.

COST OF LIVING.—The index number of the Ministry of Labour on the base July, 1914=100, was 165 at April 1, as compared with 171 at March 1. This is the lowest recorded since January, 1917. Foods were 155 as compared with 162 in March, the fall being mainly due to seasonal decreases in prices of eggs, milk and butter. Fuel and light declined from 200-205 to 190, due to reductions in prices of coal and gas from the abnormal levels resulting from the coal mining stoppage.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 655 for March, showing a rise of 10 points for the month. Imports rose 2.6 per cent and native products rose only slightly. Foods rose 2.1 per cent and industrial materials rose about 1 per cent.

COST OF LIVING.—The official index number of cost of living, Paris, on the base 1914=100, was 524 for the first quarter of 1927, a decline of about 4 per cent from the level of the last quarter of 1926. Foods, heat and light, clothing and sundries all declined considerably and rent showed no change.

Germany

WHOLESALE PRICES.—The index number of the Official Statistical Office, on the base 1913=100, was 135.0 for March, a decline of 0.4 per cent. Agricultural products declined 2.2 per cent and industrial materials rose 0.8 per cent.

COST OF LIVING.—The official index number of cost of living was 144.9 for March, this being 0.3 per cent below the February level. This was due to a decline in the foods group. There was a seasonal decline of 23.8 per cent in the price of eggs, with declines also in meat and milk and their products, and a seasonal advance in vegetable prices (with the exception of potatoes). The other group index numbers were unchanged.

Spain

WHOLESALE PRICES.—The index number of the General Statistical Service, on the base 1913=100, was 181 in March, and 182 in February. Foods rose 3 points during the period and materials declined 5 points.

RETAIL PRICES.—The official index number of retail prices of foods, fuel and sundries, Madrid, on the base 1914=100, was 194 in March as against 190 in February. Foods of animal origin, and of vegetable origin, and fuel and sundries all rose during the month.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office was 1,544 for

February, on the base average annual aggregate expenditure, four chief centres, 1909-13=1,000, showing a decline of 2.6 per cent for the month. Foods, etc., of vegetable origin, declined 7.6 per cent, textiles, metals and their products, and chemicals and manures also declined. Wood and wood products, and non-metallic minerals and their products rose slightly. Animal products showed no change.

Cost of Living.—The official index number for February, on the base July, 1914=1,000 (foods based on prices in 25 centres and other elements on prices in 4 centres), was 1,624, showing practically no change from the level of November, 1926. Rent rose slightly, clothing, etc., and the miscellaneous group declined somewhat and foods and fuel and light showed no change.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics registered 145.3 for March, compared with 146.4 for February, on the base 1913=100. This was a decline of 0.75 per cent. In all groups of commodities except metals and miscellaneous commodities, which were slightly higher, there were decreases in the price level ranging from less than 0.1 per cent in the case of house furnishing goods to 5 per cent in the case of fuels.

Bradstreet's index number (showing the cost of a list of 106 commodities) was $12.4405 on May 1, a decrease of 0.7 per cent. The principal groups to show declines were provisions, metals, naval stores, and miscellaneous products. Advances were shown by hides and leather, textiles and bread stuffs.

Cost of Living.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 164.1 for March, as compared with 165.2 for February. The decline was due to falling food prices. Sundries and coal showed small decreases in price, and there was a slight increase in the cost of gas and electricity.

The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, was 159.0 in March being about 0.8 per cent below the February level. Foods declined less than one per cent; clothing declined about 0.6 per cent; shelter declined 1.2 per cent with lower rents outside the Metropolitan Boston District; and fuel and light prices were lower, owing to a decline in electricity and kerosene prices.

Industrial Unionism in the Building Trades of the United States

An article entitled "Industrial Unionism in the Building Trades of the United States" by E. E. Cummins, Ph.D., of the Department of Economics of The College of Wooster, Wooster, Ohio, appears in the April number of the "International Labour Review" published by the International Labour Office, Geneva.

In most industrial countries the disappearance of different classes of occupation, due to the steadily increasing concentration of undertakings and to the growth in the use of machinery, has led to the gradual replacement of craft unions by industrial unions. A craft union is defined as an "organization of wage workers engaged in a single occupation. . . . The occupation may be limited strictly to one single task, or may include a number of closely allied tasks or crafts. The strict test of a craft union seems to be that each member of the organization performs or may perform all the tasks included in the occupation." An industrial union is described as a union which "attempts to unite into one homogeneous or organic group all the workers, skilled and unskilled, engaged in turning out and putting on the market a given finished product or series of closely related products." Many arguments are put forward on behalf of both types of organization. The author of the article above referred to has chosen the building industry as the most interesting field for study, in view of the long-drawn conflict between the two tendencies in the United States building trades, where the craft unionism which is traditional in the American Federation of Labour is still dominant, in spite of many inroads by industrial unionism. The Carpenters' Union, being by far the largest and most powerful of the building trades unions in the United States, and one of the most aggressive unions in America, naturally engages most of the author's attention in this study. Dr. Cummins is of opinion that, although industrial unionism has impressed itself upon the policy of the United Brotherhood of Carpenters and Joiners, if it makes no more headway among the other building trades unions than it is making among the carpenters, it is hardly likely to be victorious over the craft principle in the near future.

IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDED MARCH 31, 1927

THE accompanying tables, issued by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the fiscal year ended March 31, 1927. The total number of immigrants was 143,991, of whom 49,784 were British, 21,025 were from the United States, and 73,182 from other countries. In addition to these immigrants, 56,957 Canadians returned from the United States, so that if this number be added to that of general immigration the combined total is 200,948 for the twelve months' period.

STATEMENT OF IMMIGRATION TO CANADA, DURING THE FISCAL YEAR ENDED MARCH 31, 1927, SHOWING SEX, OCCUPATION AND DESTINATION.

UNITED STATES REPORT ON IMMIGRATION IN 1926

THE Annual Report of the United States Commissioner General of Immigration for the fiscal year ended June 30, 1926, has been received from the Bureau of Immigration (Department of Labour). The year was marked by a more stringent control of immigration than in any former year. The Commissioner claims that the strict quota system, based on the policy that American wage standards are to be upheld, has been a noticeable factor in the existing prosperity of the United States. He further suggests that "thought might well be given to curtailing the numbers that may now come in annually without quota restriction from certain countries in the New World."

Some figures for the fiscal year are given in the following paragraphs:—

In the past fiscal year 304,488 immigrant and 191,618 non-immigrant aliens entered the United States, making a total of admissions of 496,106. Against this, 76,992 emigrant and 150,763 non-emigrant aliens, a total of 227,755, left the United States. The actual increase in population through immigration, therefore, was 268,351, as compared with an increase in 1925 of 232,945, in 1924 of 662,557, in 1923 of 472,820, and in 1922 of 87,121.

In addition to the 496,106 aliens admitted during the year, 20,550 applicants were denied admission and 1,030,679 alien seamen were examined, making a total of 1,547,335 aliens accorded immigration inspection in 1926. The number of all classes inspected in the previous year was 1,488,051, or 59,284 less than during the fiscal year just closed.

Of the 304,488 immigrant aliens admitted in 1926, the countries of northwestern Europe, mainly Germany, Irish Free State, and Great Britain, sent 126,437, or 41.5 per cent, and southern and eastern Europe only 29,125, or 9.6 per cent. Canada contributed 91,019, or 29.9 per cent of the total immigrants for the year; Mexico, 43,316, or 14.2 per cent; and the other countries, 14,591, or 4.8 per cent. While Canada and Mexico continued to furnish the bulk of immigration, neither country being subject to quota restrictions, there was a decrease in the past year of 9,876 from the former and an increase of 10,352 from the latter, compared to the year 1925, when 100,895 immigrants came from Canada and 32,964 from Mexico.

One of the outstanding facts shown by the statistical record of the year is the seemingly more permanent character of immigration under the quota law. There were 10,174 more immigrant aliens admitted in 1926 than in 1925, while the total emigrant aliens departed in 1926 was 15,736 less than the number of the same class leaving the country in the year 1925. In other words, only 25 emigrants left for every 100 immigrants admitted in the past fiscal year.

The occupations of the immigrants arriving in 1926 are shown in the following percentages, which represent the proportion in each group, with all occupations as 100: professional, 3.6 per cent; skilled, 18.7; unskilled, 33.7; farmers, 3.2; farm labourers, 5.7; common labourers, 14.3; servants, 10.0; commercial, 1.9; miscellaneous, 4.4; no occupation (including women and children) 37.7.

A table is given showing the immigration to the United States from northern and western Europe, southern and eastern Europe, Asia, Canada and Newfoundland, Mexico, West Indies and other countries, by specified periods. The record for immigration from Canada and Newfoundland is as follows:—

IMMIGRANTS TO THE UNITED STATES FROM CANADA AND NEWFOUNDLAND, 1911-26

Period	Number of Immigrants from Canada and Newfoundland
1911-1915	354,976
1911	56,830
1912	55,990
1913	73,802
1914	86,139
1915	82,215
1916-1920	387,209
1916	101,551
1917	105,399
1918	32,452
1919	57,782
1920	90,025
1921-1925	539,581
1921	72,317
1922	46,810
1923	117,011
1924	200,690
1925	102,753
1926	93,368

EMIGRATION FROM GREAT BRITAIN AND IRELAND IN 1926

The *Board of Trade Journal* (Great Britain) gave the following statistics of emigration from Great Britain and Ireland during 1926.

The number of British subjects who were recorded as leaving permanent residence in Great Britain and Northern Ireland to take up permanent residence (*i.e.*, residence for a year or more) in non-European countries was 166,601 in 1926, as compared with 140,594 in 1925 and with 155,374 in 1924. The number of British subjects who were recorded as leaving permanent residence in non-European countries to take up permanent residence in Great Britain and Northern Ireland was 51,063 in 1926, as compared with 56,335 in 1925, and with 64,112 in 1924. The following Table shows the emigration figures for the principal countries concerned in each of the last two years, figures for the Irish Free State being also given:—

Country of Future Permanent Residence	Emigrants of British Nationality			
	From Great Britain and Northern Ireland†		From Irish Free State‡	
	1925	1926	1925	1926
British North America...	38,662	49,632	1,861	1,989
Australia	35,006	44,513	1,076	1,267
New Zealand	11,730	16,565	290	236
Other parts of British Empire	19,827	21,596	416	371
Total, British Empire	105,225	132,306	3,643	3,863
United States	29,549	28,740	26,416	26,063
Other Foreign Countries.	5,820	5,555	108	115
Total, All Destinations.	140,594	166,601	30,167	30,041

†In addition there were 28 emigrants from Great Britain and Northern Ireland in 1926, and 17 in 1925, who departed from ports in the Irish Free State. These emigrants are not included in the Irish Free State totals.

‡The figures in the Table show the total number of emigrants of British nationality, whether travelling direct from ports in the Irish Free State or *via* ports in Great Britain and Northern Ireland. These emigrants are not included in the totals for Great Britain and Northern Ireland.

Each division of the British Empire for which separate particulars are recorded showed an increase in the number of British emigrants from Great Britain and Northern Ireland in 1926. Of the total of 28,740 British emigrants to the United States in 1926, 13,978, or nearly one-half of the total, left permanent residence in Scotland.

Occupations.—The figures summarised in the following Table relate to British subjects of 18 years of age and upwards,* who left Great Britain or Northern Ireland to take up permanent residence in non-European countries:—

Occupations	Emigrants from Great Britain and Northern Ireland	
	1925	1926
Males (18 years and over)*:—		
Agricultural	9,912	14,238
Commercial, finance and insurance	8,574	9,798
Professional	3,543	3,492
Skilled Trades—		
Mining and quarrying	3,612	5,558
Metal and engineering	7,515	8,676
Building	1,008	1,189
Other	5,030	6,711
Transport and communications	2,198	2,584
Labourers not in agriculture or transport	4,224	4,989
Other and ill-defined occupations	6,183	7,401
Total, males	51,799	64,636
Females (18 years and over)*:—		
Domestic, hotel, etc., service	11,789	13,422
Commercial, finance and insurance	3,399	3,644
Professional	2,747	2,917
Clothing trades	1,593	1,551
Wife or housewife (not otherwise described)	24,958	28,365
Other and ill-defined occupations	6,756	7,279
Total, females	51,242	57,178

*Inclusive of a small number of migrants of 12 years of age and over whose ages were not specified.

There were noticeable variations in the proportions in the several occupational groups as between England and Wales, Scotland, and Northern Ireland. High proportions of the total number of male emigrants in each of the years 1925 and 1926 were recorded in the cases of agricultural workers and of labourers (not in agriculture or transport) from Northern Ireland, in the agricultural and in the metal and engineering groups from Scotland, and in the numbers employed in agriculture and in commerce, finance and insurance from England and Wales. There was a noticeable increase in 1926 in the relative numbers employed in mining and quarrying from Scotland, as compared with the total male emigrants of 18 years and over from that country.

At a recent inquiry by a committee of the Alberta Legislature into the working of the Workmen's Compensation Act of the province it was stated that hernia was one of the most common causes of dissatisfaction with the Board's medical findings. The Alberta Board follows the plan agreed upon by all the Boards of Canada, namely, that hernia cases shall come under the operation of compensation only when they are of recent origin and caused by a recent accident.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927

THE number of fatal industrial accidents and such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., recorded in the Department as occurring during the first quarter of 1927 was 255, there being 101 in January, 73 in February and 81 in March. In the first quarter of 1926, 217 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents were also recorded from local newspapers.

By industrial groups the fatalities occurred as follows: agriculture, 29; logging, 32; fishing and trapping, 11; mining, non-ferrous smelting and quarrying, 32; manufacturing, 47; construction, 21; transportation and public utilities, 59; trade, 4; service, 19; finance, 1. Of the mining accidents, 14 were in "metalliferous mining", 11 in "coal mining", 3 in "non-metallic mineral mining", and 4 in "structural materials". Of the accidents in manufacturing, 6 were in the group "vegetable foods"; 2 in "animal foods"; one in "textiles and clothing"; one in "rubber goods"; 6 in "pulp and paper"; 13 in "saw and planing mills"; 12 in "iron, steel and products"; 2 in "chemical and allied products"; 2 in "non-metallic mineral products"; one in "printing and publishing"; and one in "miscellaneous industries." In construction there were 7 accidents in "buildings and structures", one in "shipbuilding"; 5 in "bridge and highway"; 2 in "railway" and 6 in "miscellaneous construction". In transportation and public utilities, there were 34 fatalities in "steam railway"; 3 in "street and electric railway"; 13 in "water transportation"; 6 in "local transportation"; and 3 in "electricity and gas." In trade, there were 3 fatalities in wholesale trade and one in retail. In service there were 16 fatalities in "public administration"; 2 in "personal service" and one in "professional". There was one fatality in the group "finance".

There was a notable absence during the period of accidents involving many fatalities, the only one being that in which seven fishermen (two white men and five Indians) were lost in the capsize of a fishing boat off Vancouver Island early in January. Accidents involving two or three fatalities were as follows:

Two labourers on power dam construction at Chelsea, Que., on January 10, while standing on a log being lowered to the bottom of an emergency gate opener to act as a stop-log, fell forty feet into the river owing to the breaking of a cable, and were fatally injured; two track labourers were fatally injured near Hope, B.C., on January 1, by falling rocks as they were clearing tracks after a rock slide; a sectionman and a section foreman, riding on a jigger, near Otterburne, Manitoba, during a snowstorm, on March 5, were killed by colliding with a freight train. In "Water Transportation" on March 3, the captain, mate and cook (as well as two Newfoundlanders, whose deaths are not included in the statistics) of the Nova Scotian schooner *Montclair,* were lost when the schooner struck on a bar in a gale. Two other members of the crew were saved by coastguards, who took them in on a breeches buoy. In Montreal on March 28 two fire fighters were killed when a pump wagon struck a tree on the way to a fire.

Supplementary list of accidents.—The supplementary list of accidents occuring during 1926, to be found at the conclusion of this article, contains 22 fatalities, of which one was in agriculture; two in logging; 7 in mining; two in manufacturing; five in construction; one in trade; and four in service. Of these, five are known to have resulted fatally in 1927. Two of the accidents occurred in April; three in July; three in August; seven in October; three in November; and four in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer	Holland Landing, Ont.	Jan. 3	57	Kicked by a horse.
Farmer's son	Haysville, Ont.	" 5	22	Crushed by falling tree.
Farmer	Hillhurst, Que.	" 10	61	Struck by falling limb of tree. Died March 2.
Farmer	Indian Head, Sask.	" 11	.....	Kicked by a horse.
Farmer	St. Marc, Que.	" 14	60	Struck by train on his own farm.
Farmer	Foxwarren, Man.	" 17	32	While operating sawing machine was struck by piece of broken balance wheel.
Farm hand	Stouffville, Ont.	" 18	21	Struck by falling tree.
Farmer's son	Beauceville, Que.	" 20	18	Sawing firewood, was thrown to ground when clothes caught in shaft.
Farmer	Esterhazy, Sask.	" 20	21	Fell beneath wheels of moving train.
Farmer	Near Priceville, Ont.	" 29	35	Struck by falling tree.
Farmer	Near Iroquois, Ont.	" 29	.....	Crushed by a falling tree.
Farm pupil	Fort Saskatchewan, Alta.	" 31	22	Lit fire with gasoline; burned to death.
Farmer	Saskatoon, Sask.	Feb. 4	.....	Sleigh struck by train.
Farmer's son	Grey Townsnip, Ont.	" 5	22	Kicked by a horse.
Farmer	Near Halifax, N.S.	" 9	55	Was chopping wood when his son's axe slipped, severing artery in victim's leg.
Farmer	Chatham, Ont.	" 10	63	Fell from a load of wood, presumably following apoplectic stroke
Farmer	St. Hubert, Que.	" 10	.....	Clothing caught in shafting; victim crushed by machinery.
Farmer	Near Saskatoon, Sask.	" 11	40	Fell into well; drowned.
Farmer	Chatham, Ont.	" 11	.....	Crushed by cave-in of gravel pit.
Farmer	Near Winnipeg, Man.	" 14	60	Fell into a well; drowned.
Farmer	Lunenburg, N.S.	" 15	70	Trapped in burning barn, attempting rescue of livestock.
Farm hand	Near Humboldt, Sask.	" 21	.....	Fell from load of hay.
Farmer	Lancaster, Ont.	Mar. 4	.....	While loading logs was crushed by log rolling off load.
Farmer	Theodore, Sask.	" 6	.....	Killed in a runaway.
Farm hand	Vineland, Ont.	" 9	.....	Fell from a wagon, breaking neck. Died March 14.
Farmer	Kitchener, Ont.	" 13	60	Gored by a bull.
Farmer	St. Mary's, N.B.	" 23	.....	Struck on head by breaking winch while moving a house.
Farmer	Near Wainwright, Alta.	" 29	.....	Clothing drawn into power saw.
Farmer	Lakevile, N.S.	" 31	.....	Fell from load; died from exposure.
LOGGING—				
Chokerman	Bloedel, B.C.	Jan. 3	.....	Struck by root rolling down hill.
Logger	Near Cranbrook, B.C.	" 12	45	Driving load of logs which collapsed, crushing him.
Cook	Phoenix, Alta.	" 13	58	Rupture.
Logger	Ste. Perpetue, Que.	" 13	25	Struck by falling tree.
Boy	Near Trois Pistoles, Que.	" 13	15	While clearing road for logging, was carried down hill by snowslide, striking a tree.
Logger	Hayden Lake, B.C.	" 19	40	Fell from donkey engine; died Jan. 22.
Labourer	Robinson, Ont.	" 19	.....	Struck by tree.
Chokerman	Myrtle Point, B.C.	" 21	22	Crushed between logs.
Swamper	Carrot River, Sask.	" 25	35	Crushed by a falling tree.
Crane operator	North Vancouver, B.C.	" 26	.....	Jumping from crane to water tank, he fell between them and was crushed.
Section man	Near Courtenay, B.C.	" 27	.....	Dynamite exploded in his shack.
Logger	Lac du Saumon, Que.	Feb. 7	20	Crushed between two loads of logs.
Logger	Le Pas, Sask.	" 7	35	Crushed by a falling tree.
Timber inspector	Prince Rupert, B.C.	" 9	.....	Struck by a falling tree.
Rigging slinger	Port Renfrew, B.C.	" 12	30	Struck by falling pole, caught by knot and thrown through air. Died Feb. 14.
Bushman	Phoenix, Alta.	" 14	24	Crushed by load of logs when stake broke.
Loader	Mayo Siding, B.C.	" 16	34	Caught against car by rolling log.
Logger	Flanders, Ont.	" 18	.....	Struck by logs.
Logger	Glendale, Ont.	" 22	.....	Struck by skid.
Bushman	Near Dunnville, Ont.	" 22	52	Struck by falling tree.
Chokerman	Youbou, B.C.	" 23	23	Struck by falling snag.
Chokerman	Lake Cowichan, B.C.	Mar. 3	25	Struck by snag pulled off by a lead line.
Logger	Homfray Channel, B.C.	" 5	.....	Crushed between logs.
Labourer	Rainy Lake, Ont.	" 5	41	Struck on head by tree.
Logger	Mink Lake, Ont.	" 8	.....	Struck by a falling tree.
Logger	Denman Island, B.C.	" 10	24	Crushed between logs. Died Mar. 12.
Section foreman	Flanders, Ont.	" 10	.....	Fell on logs.
Logger	Hotham Sound, B.C.	" 15	23	Struck by a cable.
Logging contractor	Salmon Arm, B.C.	" 19	.....	Drowned when hand-sled of provisions broke through ice on lake.
Logger	Rock Bay, B.C.	" 26	58	Crushed while moving a donkey engine.
Logger	Osprey Lake, B.C.	" 26	23	Struck by a falling tree.
Bushman	Kapuskasing, Ont.	" 26	.....	Struck by a tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
7 Fishermen	West Coast of Vancouver Island	Before Jan. 6	.....	Fishing boat capsized.
Captain of vessel	Ketchikan, B.C.	" 18	.....	Painting hold with hot mixture; handed up pot which overturned, burning victim.
Fisherman	Cape Lago, Vancouver Is.	Feb. 4	.....	Drowned in fishing boat.
Hunter	Cascade, B.C.	" 11	60	Drowned on hunting trip, crossing lake on skates.
Fisherman	Cape Fairweather, Alaska	Mar. 28	.....	Canadian halibut vessel ran on rocks in snow storm and broke up, man drowned.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining:				
Chuteman	Anyox, B.C.	Jan. 16	41	Powder placed in large rock exploded when rock came down chute. Died Jan. 17.
Furnaceman	Trail, B.C.	" 17	30	After signalling electric train to charge furance, he stepped on track and was caught and crushed against furnace.
Mine Superintendent	Kirkland Lake, Ont.	" 17	38	Fall of rock.
Concrete foreman	Timmins, Ont.	" 21	44	Struck by concrete carrier owing to breaking of cable.
Engineer	Timmins, Ont.	" 22	42	Silicosis.
Miner	Gowganda, Ont.	" 23	42	Silicosis.
Electric crane operator	Port Colborne, Ont.	" 31	22	Cage on elevated track ran through open switch.
Shaftman	Kirkland Lake, Ont.	Feb. 8	26	Struck by rock.
Cage tender	Timmins, Ont.	" 8	26	Crushed between cage and wall.
Mine driller	Creighton Mine, Ont.	" 14	24	Struck by fall of broken rock.
Mining prospector	Near Stewart, B.C.	Mar. 3	53	Smothered in a snowslide.
Miner	Wanup, Ont.	" 9	.....	Fell into pit.
Chief electrician	Cobalt, Ont.	" 18	39	Electrocuted while repairing a switch.
Trammer	Britannia Beach, B.C.	" 29	.....	Buried when chute came down with a rush.
Coal mining:				
Timekeeper	Corbin, B.C.	Jan. –	.....	Run over by coal locomotive which he failed to hear.
Fireboss	Near Nanaimo, B.C.	" 13	53	Fall of material in mine, causing suffocation.
Miner	Nanaimo, B.C.	" 26	40	Fall of coal.
Miner	Grace Bay, N.S.	Feb. 3	45	Struck by fall of stone.
Miner	Glace Bay, N.S.	" 4	18	Run over by a coal "trip."
Miner	Crow's Nest, B.C.	" 11	39	Explosion.
Shiftman	Stellarton, N.S.	" 18	27	Struck by car which broke coupling and rushed down incline.
Miner	Nanaimo, B.C.	" 19	30	Crushed by fall of coal from roof.
Miner	Stellarton, N.S.	" 21	39	Struck by fall of coal. Died Feb. 22.
Overman	Forestburg, Alta.	" 24	31	Explosion.
Miner	Banff, Alta.	Mar. 24	.....	Anthrocosis.
Non-metallic mineral mining and quarrying, n.e.s.:				
Employee of salt co.	Windsor, Ont.	Jan. 2	55	Fell in a concrete abutment while vaulting over a barrier.
Foreman in mine	Thetford Mines, Que.	" 18	50	Crushed between loaded car and travelling crane at pit.
Quarry worker	Laprairie, Que.	Feb. 14	37	Explosion of delayed charge.
Structural materials:				
Labourer	Hagersville, Ont.	Feb. 1	.....	Crushed by machine.
Quarry worker	St. Damase, Que.	" 17	23	Crushed by frozen lump of gravel.
Labourer	Pilot Butte, Sask.	" 21	.....	Crushed by cave-in of sand.
Labourer	Calgary, Alta.	Mar. 23	38	Crushed in cave-in when thaw loosened frozen ground.
MANUFACTURING—				
Vegetable foods, drink and tobacco:				
Baker	Toronto, Ont.	Jan. 4	72	Cut finger on bread pan; infection; died Jan. 9.
Stable foreman	Toronto, Ont.	" 6	.....	Kicked by a horse.
Labourer	Halifax, N.S.	" 20	68	Walked into open elevator shaft.
Grist mill owner	Ste. Croix, Que.	" 20	50	Cleaning ice off mill wheel which revolved and crushed him against wall.
Labourer	Teeswater, Ont.	Mar. 12	46	Struck by train.
Labourer	Montreal, Que.	" 24	61	Fell from ladder.
Animal foods:				
Labourer in packing plant	Edmonton, Alta.	Jan. 15	.....	Fell from ladder.
Fireman at factory	Hickson, Ont.	" 17	24	Crushed by falling coal.
Textiles:				
Labourer deepening waste dump	Valleyfield, Que.	Mar. 14	21	Struck by a rock following blast.
Rubber goods:				
Operative	Elmira, Ont.	Feb. 22	70	Fell on head on floor.
Pulp, paper and paper goods:				
Labourer	Fort William, Ont.	Jan. 27	40	Crushed while hoisting a beam which fell out of sling following jerk on rope.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—*Con.*				
Pulp, paper and paper goods—Con.				
Labourer	Mattawa, Ont.	Feb. 2	19	Fell through coal chute; suffocated.
Scaler	Iroquois Falls, Ont.	Mar. 1	35	Found dead in shack; violence.
Paper maker	Shawinigan Falls, Que.	" 8	31	Skull crushed by falling heavy roll of newsprint.
Foreman with pulp company	Cornwall, Ont.	" 16	39	Caught in shafting.
Labourer	Port Alfred, Que.	" 24	.....	Buried under slide of ashes.
Printing and publishing:				
Employee of newspaper	Montreal, Que.	Mar. 5	79	Struck by a street car on way home from work. Died Mar. 9.
Saw and planing mills:				
Saw operator	Fesston, Sask.	Jan. 3	.....	Fell against blade, severing arm.
Grader	Victoria, B.C.	" 19	25	Fell from scaffold.
Labourer	Sarnia, Ont.	" 24	44	Caught arm in machinery. Died Feb. 4.
Saw mill worker	Near Blissfield, N.B.	" 28	.....	Slipped into boiling water (used to take frost out of wood). Scalded. Died Feb. 1.
Labourer	Irish Settlement, N.B.	Feb. 2	65	Struck by deal thrown back by rollers of an edger. Died Feb. 4.
Saw mill owner	Jaffrey, B.C.	" 4	.....	Blasting operations at sawmill.
Mill hand	Oxford, N.S.	" 11	.....	Struck by piece of wood.
Caretaker	Sudbury, Ont.	" 14	30	Fractured skull.
Planerman	Mission, B.C.	" 22	57	Putting on belt; hand caught, throwing him over pulley. Concussion. Died Feb. 26.
Lumber teamster	Cobalt, Ont.	Mar. 7	.....	Fell from load of logs. Died Mar. 8.
Sawyer	Weldon, Sask.	" 11	19	Mangled by wood machine saw.
Sawyer	Biscotasing, Ont.	" 22	39	Caught between couplings.
Scaler	Barrhead, Alta.	" 29	17	Broken arm; gangrene and peritonitis; died April 1.
Iron, steel and products:				
Teamster	Ottawa, Ont.	Jan. 3	30	While helping to unload car-wheels with a crow-bar, wheel fell and crowbar struck him on head.
Labourer	Galt, Ont.	" 10	41	Explosion under boiler; burns.
Labourer	Brantford, Ont.	" 11	76	Threw match into gasoline; burned by explosion.
Machinist	Brantford, Ont.	" 13	59	Was grinding piece of steel which slipped, striking victim on head.
Labourer	Brantford, Ont.	" 19	59	Caught in shafting.
Labourer	Quebec, Que.	" 27	34	Was crushed between sleigh load of machinery and tractor drawing same. Died Jan. 29.
Labourer	Pont Rouge, Que.	Feb. 9	38	Drowned while cutting ice to open channel.
Planing machine operator	Montreal, Que.	" 14	47	Syncope.
Labourer	Welland, Ont.	" 21	.....	Fractured ankle.
Labourer	Hamilton, Ont.	Mar. 1	40	Sitting on door sill of oven, was crushed by machine.
Oiler	Sault Ste. Marie, Ont.	" 9	17	Leg caught in moving gears. Died Mar. 11.
Labourer	St. Catharines, Ont.	" 31	.....	Caught fingers; infection.
Non-metallic mineral products:				
Labourer	Near Windsor, N.S.	Jan. 29	18	Overcome by blast in lime kiln. Burned to death.
Labourer	Niagara Falls, Ont.	Mar. 14	.....	Dropped small motor on toe; septicaemia.
Chemical and allied products:				
Manager of plant	Erindale, Ont.	Feb. 23	33	Automobile accident.
Worker in fuse plant	Brownsburg, Que.	Mar. 4	32	Explosion; cause unknown.
Miscellaneous industries:				
Labourer	Goderich, Ont.	Jan. 11	67	Clothing caught in belt, drawing victim around shaft.
CONSTRUCTION—				
Buildings and structures:				
Carpenter	Toronto, Ont.	Jan. 12	45	Fell from scaffolding when plank slipped.
Labourer	Drummondville, Que.	" 12	45	Struck on head by falling steel beam.
Labourer	Quebec, Que.	" 20	.....	Struck by falling stone. Died Jan. 25.
Labourer	Beaupré, Que.	" 25	.....	Fell from top floor of a mill under construction.
Labourer	Montreal, Que.	Feb. 1	28	Pulled wrong rope to lower swinging stage, fell to ground. Died Feb. 3.
Carpenter	Ottawa, Ont.	" 16	26	Fell from top of a building under construction when derrick gave way.
Labourer on building excavation	Montreal, Que.	Mar. 31	30	Failed to heed a signal; blown up with rocks.
Railway construction:				
Driller	Crilly, Ont.	Jan. 24	60	Crushed by rock.
Driller	Crilly, Ont.	Feb. 17	33	Drowned.
Shipbuilding:				
Riveter	Kingston, Ont.	Jan. 25	56	Slipped off scaffold plank and fell onto ice.
Bridge and highway construction:				
Foreman	Dain City, Ont.	Jan. 28	50	Struck by derrick which collapsed following buckling of boom.
Bush worker	89 Waterways, Man.	Feb. 9	17	Crushed by falling tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927—Con;

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Bridge and highway construction—Con.				
Labourer	Cascades, Que.	Feb. 24	26	Pinned against a sleigh by cave-in of sand pit. Died Feb. 26.
Mechanic	Toronto, Ont.	Mar. 8	26	Fell from bridge; drowned.
Labourer	Lac la Hache, B.C.	Died Mar. 31	55	Caught in a rock slide on highway, a long illness being caused.
Miscellaneous construction:				
Labourer	Chelsea, Que.	Jan. 10	37	Were standing on logs which were being lowered when cable gave way, throwing them into water.
Labourer	Chelsea, Que.	" 10	24	
Labourer	Chelsea, Que.	" 17	23	Arm drawn into machinery of stone crusher.
Machinist	Bitobe Dam, Que.	Feb. 19	.....	Was unloading boat when jack slipped, victim crushed.
Labourer	Bitobe Dam, Que.	Mar. 8	.....	Fell 73 feet from dam.
Concrete finisher	Grand Falls, N.B.	" 15	45	Crushed by carload of concrete which jumped rails.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways:				
Track labourer	Near Hope, B.C.	Jan. 1	23	Struck by falling rocks while clearing tracks after rock slide. One died same day, one died Jan. 4.
Track labourer	Near Hope, B.C.	" 1	28	
Section hand	Sooke, B.C.	" 3	63	Collision of gasoline coach with hand car.
Foreman switchman	Winnipeg, Man.	" 5	50	Shaken from back of freight car while shunting, run over.
Foreman	Near Kathryn, Alta.	" 6	60	Slipped on stringer and fell, striking a cross-piece at bottom of flume.
Labourer	Toronto, Ont.	" 6	28	Crushed while unloading heavy objects. Died Jan. 10.
Employee in bridge department of railway	Near Thorold, Ont.	" 10	19	Working on trestle; knocked down and run over by train.
Carpenter	St. John, N.B.	" 13	65	While dismantling shed, fell from roof.
Janitor	Leaside, Ont.	" 13	63	Struck by auto.
Labourer	Near Moncton, N.B.	" 13	24	Fell from snow train; run over.
Trackman	Montreal, Que.	" 14	42	While shovelling snow, run over by a backing freight train.
Cook	Lloydminster, B.C.	" 15	.....	Slipped on ice and fell under moving engine.
Brakeman	St. Thomas, Ont.	" 17	37	Crushed between cars.
Section foreman	Near Mossbank, Sask.	" 19	62	Struck by train when removing hand car from track.
Car repairer	Toronto, Ont.	" 28	40	Crushed between cars while repairing car on siding.
Fireman	Thompson Station, N.S.	" 31	.....	Collision of passenger trains owing to locked switch.
Brakeman	Port Coquitlam, B.C.	Feb. 5	.....	Slipped from frosty car roof, falling to death.
Brakeman	Pacific Junction, N.B.	" 9	35	Fell from a box car, struck by an oil box.
Sectionman	Shumka, Ont.	" 9	33	Struck by snow-plow.
Yard labourer	Revelstoke, B.C.	" 10	56	Struck by a yard engine.
Labourer	Megantic, Que.	" 11	63	Struck by a locomotive.
Carpenter	Raith, Ont.	" 19	27	Struck by train.
Yardman	Brockville, Ont.	" 23	23	Fell under a car when coupling.
Brakeman	Spence's Bridge, B.C.	Mar. 4	26	Fell from freight train, run over.
Labourer	Superior Junction, Ont.	" 4	54	Struck by train.
Section foreman	Near Otterburne, Man.	" 5	47	Gasoline speeder ran into train in snowstorm, on slippery track.
Sectionman	Near Otterburne, Man.	" 5	43	
Tramways switch cleaner	Montreal, Que.	" 8	65	Struck by taxicab while cleaning a switch.
Ergineer	Redpass Junction, B.C.	" 8	52	Caught between drawbars when investigating break away of cars.
Engineer	Near Jasper, Alta.	" 9	.....	Caught between knuckles of engine connection while repairing.
Car inspector	Coteau, Que.	" 9	38	Apparently struck by train.
Yard foreman	Calgary, Alta.	" 11	33	Knocked down and run over by car.
Car repairer	Hamilton, Ont.	" 14	22	Crushed beneath box car when jack collapsed.
Painter	Calgary, Alta.	" 24	56	While painting pipes in a tunnel connected with shops, was scalded owing to breaking of valves.
Street and electric railways:				
Motorman	Vancouver, B.C.	Jan. 18	50	Crushed while coupling cars.
Lineman	Point Grey, B.C.	Mar. 9	43	Pole which was being hoisted to position slipped and struck victim.
Employee	Near Thorold, Ont.	" 20	68	Struck by car while walking on tracks.
Water transportation:				
Marine engineer on coal barge	Nanaimo, B.C.	Jan. 8	33	Fell through hatchway into hold.
Longshoreman	New Westminster, B.C.	" 12	35	While loading ties was struck by one and knocked into water; drowned.

TRANSPORTATION AND PUBLIC UTILITIES—*Con.*				
Water Transportation—Con.				
Longshoreman	Union Bay, B.C.	Jan. 23	63	Fell from dock into water, striking head on piling.
Carpenter	North Vancouver, B.C.	" 26	53	Was hit by sling and thrown through open hatch into hold.
Sailor	Liverpool, N.S.	Feb. 19	29	Fell between steamer and wharf; drowned.
Cook on tug boat	Quatsino Sound, B.C.	Feb. 19	34	Fell overboard; drowned.
Longshoreman	Vancouver, B.C.	" 24	38	Struck by sling load of scrap iron which fell into hold.
Captain of schooner	Off Cape Cod, Mass. (U.S.A.) coast	Mar. 3	.....	Wreck of Nova Scotian schooner off Mass. coast in storm.
Mate of schooner	" " " "	" 3	.....	
Cook of schooner	" " " "	" 3	.....	
Captain of schooner	Lockport, N.S.	" 8	35	Walking across ice, fell through hole; drowned.
Seaman	St. John, N.B.	" 9	.....	Fell on steamer.
Superintendent of stevedoring firm	Vancouver, B.C.	" 21	45	Fell into hold of vessel.
Local transportation:				
Auto driver	Montreal, Que.	Jan. 3	32	Pinned beneath car in an elevator pit.
Teamster	Near Dryden, Ont.	Feb. ..	.....	Crushed by collapse of load of ties.
Carter	Near Turgeon, Que.	" 19	55	Lost in snowdrifts; frozen.
Taxicab driver	Toronto, Ont.	" 21	31	Hurled through windshield when taxicab collided with a street car; died Mar. 2.
Tractor operator	Near Red Lake, Ont.	Mar. 19	.....	Crushed under overturned tractor.
Teamster	Bible Hill, N.S.	" 26	79	While driver walked down hill, horses began to trot so that he lost footing and fell beneath wheels; run over.
Electricity and gas:				
Conduit worker	Montreal, Que.	Jan. 4	28	Asphyxiated by gas. Died Jan. 5.
Lineman	Hamilton, Ont.	Feb. 10	27	Touched live wire; electrocuted while at top of pole.
Lineman	Burford, Ont.	Mar. 7	48	Electrocuted when wet ladder touched high tension wires.
TRADE—				
Wholesale:				
Fur buyer	Digby, N.S.	Jan. 8	.....	Car skidded and crashed through bridge rail.
Salesman for biscuit manufacturing company	Montreal, Que.	Mar. 3	26	Automobile struck by train.
Warehouseman	Prince Rupert, B.C.	" 24	.....	Died from results of infection of scratch.
Retail:				
Teamster	Edmonton, Alta.	Jan. 11	.....	Crushed between waggon and wall while backing up to coal chute.
FINANCE—				
Bank messenger	Montreal, Que.	Jan. 8	15	Crushed by elevator which he operated contrary to orders.
SERVICE—				
Public administration:				
Civic labourer	Vancouver, B.C.	Jan. 6	50	Buried by cave-in of sewer; suffocated.
Manager of government experimental farm	Prince George, B.C.	" 8	.....	Gored by bull.
Customs officer	Prince Rupert, B.C.	" 24	45	Fell from deck into harbour. Died Jan. 25.
Labourer in municipal workshop	Montreal, Que.	Feb. 2	.....	Fell 20 feet owing to faintness. Died of pneumonia Feb. 8.
Park guardian	Quebec, Que.	" 4	74	Struck by a passing train while on way to work.
Employee of incinerator department	Montreal, Que.	" 14	51	Riding on sleigh which was struck by street car; crushed. Died Feb. 28.
Labourer	St. Damase, Que.	" 24	.....	Struck by rock in quarry.
Firefighter	Montreal, Que.	Mar. 10	34	Thrown from pump waggon which struck a cart to avoid another collision.
Farmer on road maintenance	Ste. Ursule, Que.	" 12	62	Hauling gravel from a quarry through a cut-out whose sides collapsed; victim was crushed.
Police constable	Montreal, Que.	" 18	30	Hurled from a motorcycle which crashed into a taxicab.
Wireless operator	Merry Island, B.C.	" 22	40	Burned in gasoline explosion.
Firefighter	Montreal, Que.	" 28	.....	Pump waggon struck tree, speeding on icy pavement.
Firefighter	Montreal, Que.	" 28	.....	
Driver of forestry branch speeder	Sault Ste. Marie, Ont.	" 28	.....	Speeder struck by train on bridge, hurled into current.
Firefighter (cad.)	Fredericton, N.B.	" 29	.....	Run over by hose truck.
Labourer on sewer excavation	Toronto, Ont.	" 30	51	Buried under cave-in of sand.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1927—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
SERVICE—*Con.*				
Personal:				
House cleaner	Montreal, Que.	Feb. 14	60	Turned on gas not knowing fittings were disconnected; overcome and asphyxiated.
Labourer	Montreal, Que.	" 15	48	Slipped from roof while shovelling snow; fell to ground.
Professional:				
Porter in university	Montreal, Que.	Mar. 17	52	Fell down elevator shaft. Died Mar. 18.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1926

AGRICULTURE—				
Farm hand	Vassar, Man.	Oct. ..	32	Gored by a bull. Died Mar. 2, 1927.
LOGGING—				
Logger	Aleza Lake, B.C.	July 21	18	Fell from boom; drowned.
Engineer	Boedel, B.C.	Dec. 28	.....	Struck by log falling from choker.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining:				
Foreman	Howrey Creek, Ont.	April 13	31	Fell from scaffold on water tank.
Driller	Copper Mountain, B.C.	Oct. 13	37	Slivers in hand from handling drilling apparatus; infection. Fatal Oct. 20.
Miner	Ladysmith, B.C.	" 15	59	Crushed between cars. Died Jan. 15, 1927.
Labourer	Timmins, Ont.	" 30	41	Silicosis.
Coal mining:				
Miner	Queen's County, N.B.	Aug. 17	54	Jammed hand and leg; infection.
Non-metallic mineral mining and quarrying, n.e.s.:				
Labourer	Caledonia, Ont.	April 8	20	Fall of gravel from bank.
Labourer	Preneveau, Ont.	July 1	42	Fell in pit.
MANUFACTURING—				
Saw and planing mills:				
Fireman	Newcastle, N.B.	Oct. 4	35	Overalls caught fire; died of anaemia and exhaustion Feb. 5, 1927.
Wood products:				
Salesman	Windsor, Ont.	Aug. 17	50	Fractured ankle; infection.
CONSTRUCTION—				
Buildings and structures:				
Labourer	Vancouver, B.C.	Aug. 31	45	Struck by skip of cement mixer. Died Jan. 28, 1927.
Labourer	Ste. Anne de Beaupré, Que.	Nov. ..	25	Fell from a mill under construction. Died Mar. 2, 1927.
Carpenter	Vancouver, B.C.	Dec. 14	46	Struck by belt which had broken.
Miscellaneous construction:				
Labourer	Stratford, Ont.	Nov. 3	.....	Crushed by cave-in.
Labourer	Kelowna, B.C.	Dec. 15	26	Fell from staging.
TRADE—				
Wholesale:				
Warehouse foreman	Salmon Arm, B.C.	Dec. 20	49	Fell down freight elevator shaft. Died Dec. 21.
SERVICE—				
Public administration:				
Stableman with corporation	Toronto, Ont.	Oct. 17	.....	Kicked by a horse.
Park warden	Near Banff, Alta.	" 27	.....	Car overturned; suffocation resulted.
Street sweeper	Westmorland Co., N.B.	Nov. 21	.....	Struck by auto; fractured leg; pneumonia.
Recreational:				
Workman with theatre	Hamilton, Ont.	July 27	.....	Thrown off bicycle.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Powers of Adjustment Board under Male Minimum Wage Act of British Columbia

THE LABOUR GAZETTE, December, 1926 (page 1177), contained a note on the decision of the British Columbia Court of Appeal in the case of *Rex versus Robertson and Hackett Sawmills Limited,* in which defendants appealed from the dismissal by Chief Justice Hunter of an appeal from a conviction by a magistrate at Vancouver. The prosecution was founded on the provisions of the Male Minimum Wage Act (Statutes of B.C., 1925, chapter 32, section 7), which enacts that every employer shall post up in his establishment a copy of the order of the Board of Adjustment fixing a minimum wage for his employees. In this case the Board had issued an order fixing a minimum rate of wages for the lumber industry at 40 cents an hour. This order the company refused to post up in its establishment. The Court of Appeal affirmed the conviction of the defendant, four judges dismissing the appeal, while one would have allowed it.

Chief Justice Macdonald, in giving judgment, pointed out that it was for a breach of the order of the Board that the appellants were convicted. "Their answer to the charge and the only one open to them, is, that the order was made without authority of the Act, and is therefore null and void. They submit that no obligation was imposed upon them by the Act to post up a piece of paper which in contemplation of law had no existence. The question for decision, therefore, is not whether the Board made the right order or the wrong order, but whether they had power to make the order, whether it were right or wrong."

Counsel for the defence argued that the Board was authorized under the Act to fix a minimum wage for those engaged in "occupations," but not for those engaged in "industries," and that the order was of the latter description. Secondly, it was argued that the Board was authorized to fix a minimum wage only for all those engaged in an "occupation" throughout the province, not for some of them merely.

On the latter point the Chief Justice said: "The question, it will be borne in mind, is not whether the order is right or wrong, but whether it is or is not null and void. It is conceded that the Board have power to fix a minimum wage for those in occupations to which the Act applies. It is also conceded that the Board is authorized to make an order that all those employees, for instance, engineers, blacksmiths, etc., throughout the province, shall receive not less than a stated wage. But it is denied that this may be done as it were, piecemeal. It must be applied to all engineers, etc., irrespective of the particular industry to which they may be attached for the time being. That is the appellant's contention. That contention, in my opinion, goes only to the legality of the order, not to the powers of the Board to make it. The Board have power to make a general order. We will assume that they mistakenly made a limited one; that order may be wrong, but not a nullity; the latter is the only question we are concerned with. The Act itself, I think, contemplates successive orders and admits of the fixing of minimum wages for all employees engaged in occupations connected with particular industries. It would be difficult otherwise to give effect to the peculiar circumstance of separate employers contemplated by the Act."

On the question whether the Board had authority to fix a minimum wage for an "industry" rather than an "occupation," the Chief Justice pointed out that the order fixed a minimum wage of 40 cents for all employees in the lumber industry whatever their several occupations might be. "True, it does not specify those occupations by name, but it includes them all in the 40 cent rate. Now, whether or not that is a fair way of dealing with them, having regard to the different standards of wages, is not the question. The question is one of *ultra vires* or *intra vires,* not merely right or wrong."

Judge Galliher, on the other hand, in a dissenting judgment, held that the Board "should first fix a minimum wage for a class of occupations, say a carpenter, a blacksmith, or a stationary engineer, so that not less than a stipulated wage may be paid to him in the carrying on of his occupation generally, no matter how favourable the conditions are, thus establishing a basis which shall be the minimum in that occupation. Then having established the basis, the Board may, where the employee is engaged in his occupation, where the conditions are hazardous to life or health (to instance mining) or for other good reasons within the Act, grade up (if I may use the expression) the minimum wage to the employee under such conditions. Once you have established your minimum wage for an occupation you cannot grade down—if conditions call for it, it may be graded up, and to grade up you must have a basis or foundation to start from."—(British Columbia—*Rex versus Robertson and Hackett Sawmills Limited.*)

According to reports in the press a decision was given in Prince George during April to the effect that cook-house employees in lumber camps are not entitled to the minimum wage of 40 cents an hour, which has been fixed by the Board for the industry as a whole.

Question of Validity of Manitoba Sunday Legislation

The Hon. R. W. Craig, attorney-general of Manitoba, announced on April 27, according to the *Manitoba Free Press,* that the provincial government intended to join the Lord's Day Alliance in requesting the Dominion Government, through the Minister of Justice, to make a reference to the Supreme Court of Canada as to the meaning of certain provisions contained in the Dominion Lord's Day Act (Revised Statutes of Canada, 1906, chapter 153). This question arose out of legislation passed by the Manitoba Legislature in 1923 permitting the conveyance of passengers to summer resorts on Sunday, and so enabling citizens of Winnipeg to make excursions on that day to Winnipeg Beach. The Lord's Day Alliance questioned the validity of this act, which was upheld unanimously by the Supreme Court of the province, and on appeal, by the Judicial Committee of the Privy Council (Labour Gazette, July, 1924, page 624, etc).

The Attorney General stated that when the validity of the Sunday excursion trains measure was tested in the courts, two points were raised. One was as to whether permissive legislation permitting something that was otherwise prohibited by the federal Lord's Day act was possible. The other point was as to whether, even without that permissive legislation, Sunday trains were lawful in Manitoba.

The Manitoba appeal court held—and the Privy Council upheld its decision—that the legislation, being permissive, and not prohibitory, was within the power of the Manitoba Legislature. Regarding the second point, some of the judges of the Manitoba Court of Appeal held that the legislation was not necessary, the effect of their conclusion being that the law in Manitoba with reference to Sabbath observance was the statute, or common law of England as it was in 1870, when Manitoba became a province. The point was not dealt with by the Judicial Committee of the Privy Council on the ground that as they had decided the matter on the other phase of it, there was no necessity to consider this aspect.

The opinions of some of the judges of the Manitoba Court of Appeal, together with a prior decision in a civil case, have left the question, from a legal and constitutional point of view, uncertain as to just what is the law in Manitoba in regard to Sabbath observance. "In other words," Mr. Craig pointed out, "the question is whether the federal or Lord's Day act is the law of Manitoba, except as it may be varied by some permission statute, or whether it is the common law of England as it was in 1870?"

In the opinion of the Lord's Day alliance, the matter has been left pretty much up in the air, so to speak, and the alliance has been pressing for some time to get an authoritative pronouncement on the meaning and effect of several sections of the federal act, particularly those in which the words "or law" are somewhat ambiguously used.

Objection Made by Trade Union to Manufacturer's Trade-Mark

Announcement was made on April 25 that an action which had been instituted in the Exchequer Court of Canada in 1925, under the Trade-Mark and Design Act, by Mr. Max Jacobs, of the Union Overall Manufacturing Company of Canada, Montreal, for the registration of a certain trade-mark, had been discontinued without costs. The discontinuance of the case followed a settlement which had been reached between Mr. Jacobs and representatives of the United Garment Workers of America, who had objected to the registration of the company's trade-mark on the ground that the same was liable to mislead the public owing to its resemblance to their union label.

When proceedings in this case before the Exchequer Court were commenced, Mr. W. F. Bush, of Greenwood, Ontario, an officer of the United Garment Workers of America, sought the right to oppose the proposed registration on behalf of the members of the United Garment Workers of America. Counsel for Mr. Jacobs opposed Mr. Bush's application, but in December, 1925, Mr. Justice Maclean rejected Mr. Jacobs' application to dismiss the objections of Mr. Bush. The facts of the case were stated by Mr. Justice Maclean on this occasion as follows:—

By his petition filed herein on the 17th of March, 1925, Max Jacobs, doing business in Montreal as a manufacturer of overalls and other garments under the name and style of the Union Overall Manufacturing Company of Canada, seeks to obtain an order of the court directing that a mark or label consisting of two clasped hands with the words "Mechanics and Labourers are you Union Men", and the

words "Union Overalls of Canada" be registered as a specific trade-mark in Canada.

On the 6th of June, 1925, an order was made by me directing that,

> Walter Frederick Bush, of Greenwood, in the province of Ontario, be and he is hereby authorized to oppose this application on behalf of and for the benefit of the United Garment Workers of America, and that all members of the said association be bound by the result of this action or proceeding as though they had been before the court throughout the action or proceeding.

On the 9th of July, Bush, in his representative capacity, filed a statement of objections to the petition alleging, among other things, that the United Garment Workers of America was a voluntary association or trade union having its chief place of business in New York City, U.S.A., that it had a large membership throughout the United States and Canada, and that he, Bush, was a member of it. He further alleged that the association was organized in April, 1891, and about that time had adopted as its distinguishing badge or union label a representation of two clasped hands; that such label had been used by the association continuously since its adoption in connection with its various activities, and is usually associated with other features, as for instance, the name of the association; that the association has contracts with a large number of manufacturers in the United States and Canada whereby such manufacturers operate their establishments as union shops and are permitted by the association, as a method of advertising and as a means of promoting sales, to affix the union label to all garments manufactured by them under such contracts; that the petitioner has no contract with the association, and that his establishment is not operated under or in accordance with the rules of the association, nor is union labour employed therein; that the said label is used by the petitioner without the permission of the association. The association further alleges that the label is not the proper subject of a trade-mark, is calculated to deceive or mislead the public, and that the association would be aggrieved by such registration.

Elsewhere the judgment stated:—

> It is no answer to the objections of this voluntary association or trade union to say that they have as a body no legal right to register as a trade-mark the label used by them in connection with their various activities. That might well be the case, but it does not derogate from their right to oppose the registration of their label, as a trade-mark by the petitioner.

Dismissal for Cause may be Justified by Series of Minor Causes

The assistant manager of a firm in Toronto was appointed to act as manager of a new branch of the business at Winnipeg, and he served in the latter capacity from June, 1925, to June 26, 1926, when he was dismissed. He brought an action in the Manitoba Court of King's Bench against the employers for damages, alleging that the dismissal was wrongful and illegal. At the same time he claimed certain sums alleged to be due in damages, and as commission on sales effected by the Winnipeg branch.

Contradictory evidence was given as to the terms on which the plaintiff was engaged by the company, the company's general sales manager stating that he had engaged the plaintiff at a straight salary, while the plaintiff on the contrary stated that he had been appointed by the president of the company, who had fixed the terms of his employment, including salary and bonuses. The court accepted the evidence of the company's officials on this point in preference to that of the plaintiff, as being more probable. As to the alleged wrongful dismissal, the defendant company alleged that the plaintiff was dismissed "for cause", that is, for wilful disobedience of the instructions of the defendants given in the course of his employment, and for habitual neglect and failure properly to perform his duties.

The court sustained the contention of the employers, the judgment stating that "it is not always easy for an employer who finds an employee thoroughly unsatisfactory and deficient in obedience or competence to point to a single instance which would justify his summary dismissal. But I do not think it is necessary to rely upon such a single instance where the employee's conduct shows a general laxity and disregard of instructions in a business requiring energy, accuracy of accounts, and strict adherence to instructions, such as this business required."

—(Manitoba—Ross versus Willard Chocolates, Limited).

Illegal Overtime in Belgium

An award of the *Conseil des prud'hommes* of St. Josse-ten-Noode, in Belgium, provides that a worker who works overtime in contravention of the Eight Hour Day Act of June 1921 makes himself liable, not to be prosecuted, as is the case with the head of an undertaking who causes or allows a worker so to work, but to be refused payment of overtime pay or any remuneration for work outside the legal hours of work. If the employer refuses, no court can compel him to pay for work which is done contrary to the Act. Further, in the event of dismissal without notice, the indemnity due to the dismissed worker (which is equal to half the wage for the period of notice not given) may be calculated only on the number of hours worked in accordance with the law.

Disciplinary Power of Union Executive

The Court of Appeal at St. Louis, Missouri, recently refused the application made by a member of the International Association of Bridge, Structural and Ornamental Iron Workers, for an injunction against the officials of the union, who on account of certain irregularities on the part of the applicant had fined him and debarred him from holding office or attending meetings for a certain period. He claimed that the general executive board of the union had no authority to try him. On this plea the court gave judgment as follows:—

If this were true, it is manifest that he could not have been tried at all, and he might as suggested by defendants, have committed any offense with impunity, no matter how derogatory to the interests of the association, so long as he was careful at the same time, to include some slander against the members of the general executive board. Or, if the argument is carried to its logical conclusion and plaintiff's theory adopted that the tribunal could never be composed of persons having a possible interest in the subject matter, in the event that a member of an organization should slander the entire membership of his association, no one competent to try him could be found, and the association would be thus rendered utterly helpless to defend itself against such member's attacks, no matter how vicious or unwarranted they might have been.

There are many instances that occur to us in which the members of the tribunal before which the hearing is had are either directly or indirectly affected by the offences alleged to have been committed. Courts cite and try persons for contempt. Directors of boards of trade and stock exchanges try members for offences which have injured the very directors sitting in judgment, and similar practice is to be found in the case of police boards, medical societies, bar associations, clubs and other social organizations.

We conclude, therefore, that, inasmuch as the manner of plaintiff's trial was governed by the contract existing between him and the international association, and inasmuch as the hearing appears to have been conducted in substantial conformity with the laws and rules of practice provided in the constitution by which he had agreed to be bound, his objections to the validity of his trial and conviction are not well taken.

In a judgment rendered by the First Divisional Court at Hamilton, Ontario, in a case concerning non-payment of wages, it was held that when a contract of employment has been made by a person acting for the employer, who does not disclose that he was acting for a principal, such a person becomes personally liable for the payment of wages.

Legality of Deductions from Piece-Workers' Wages

The question of the legality of the customary method of paying piece-workers in the textile trades in Great Britain was decided in a judgment given in April by the Master of the Rolls in the Court of Appeal, dismissing an appeal brought by a female employee against a decision of a divisional court of the King's Bench Division. The point at issue was whether or not the employer could lawfully make deductions from the employees' wages for bad or careless work. The employee had submitted a claim under the Employers and Workmen Act, 1875, for the sum of 6 pence, being the balance of wages alleged to be due to her and unlawfully deducted by the employers, who counter-claimed for one shilling in respect of damages sustained by them through the negligence of the employee. It was admitted that the appellant was negligent, and that the one shilling claimed by the employers was a fair claim for the damage done to the employers' cloth through her negligence.

The case stated found that it was the duty of the appellant to weave a good merchantable cloth by performing her work without negligence and in a careful manner; that she was to be paid for her work according to a standard list, an implied condition of which was that the prices in the list should apply to good merchantable cloth produced by the observance by the appellant of her duty as a weaver. There was a practice to pay more than the standard price if the materials provided by the employer were defective, as payment for extra work due to defective material. But if the workmanship of a weaver was bad or negligent, there was, and had been for many years, a custom to pay a sum less than the sum contained in the standard list—namely, the standard list price less compensation assessed by the employer of a reasonable amount in respect of the loss suffered by him for damage to his cloth. It was admitted for the purpose of the case that the deduction of six pence was fair and reasonable and less than the actual loss caused to the employers.

The employers contended that section 3 of the Truck Act, 1831, which made deductions from standard wages illegal, had nothing to do with a deduction for bad work; that the

amount of wages "earned by" and the amount "payable to" a workman were not necessarily the same thing, but that in this case the amount shown in the standard list was not "earned" because some of the work was bad and that that amount was subject to a deduction for bad work. Nor was it "payable" to the weaver because the amount to be paid was the net wage after the deduction, which formed no part of the wages.

The Master of the Rolls, in giving judgment, said that he agreed with the majority in the Divisional Court. He would be sorry to weaken in any way the effect of the Truck Act, 1831, which said in section 3 that

> The entire amount of the wages earned by or payable to any artificer . . . in respect of any labour by him done in any such trade shall be actually paid to such artificer in the current coin of this realm. . . .

But the facts as found in the case stated must be considered and the court was bound by those findings. In those findings was the fact that the right to make certain deductions had always been part of the weaver's contract of service. There had always been a scale allowing for deductions and additions, and, though it was also found that the weavers as a class had always objected to the deductions, yet the custom had gone on for very many years.

In the standard list of prices payable to the piece workers there was not only provision for deductions in the case of unsatisfactory work, but there was also a provision that if the materials provided by the employer were not good he was to pay the piece workers on a higher scale. Further, as those provisions were bound to lead to disputes, there was a provision for settling them.

The point was made that by deducting the six shillings the employers had not paid the "entire amount" to the artificer, but, if a calculation could be made which allowed a deduction for bad work and an increase for bad material, it was impossible to say until that calculation had been made what the wages earned really were, and, therefore, what the "entire amount" might be.

Question of "Loss of Earning Power"

The continuance of payments of compensation to an injured workman who was dismissed from his employment owing to the abnormal condition of the labour market was the subject of a decision of the Court of Appeal (England and Wales), during April. The case concerned a miner, 64 years of age, who had worked for many years for his employer. He had been injured in 1904, when he lost an arm. Subsequently he was given light work with the same company. In September, 1924, the pit in connection with which he worked closed down owing to industrial conditions. When the workman applied for his compensation payment the County Court refused to make an award, holding that the employment would have been terminated in any event, even if he had not received injury. The plaintiff appealed, and the Master of the Rolls, in giving judgment in appeal, said that the object of workmen's compensation was to give an injured man a livelihood so long as the incapacity due to the accident lasted. The statutes made no reference to intervening causes. Old age had been held to be no bar, and even a man imprisoned for theft had been held to be entitled while he was actually in prison. It had been repeatedly pointed out by the Court, the judgment stated, that the condition of the labour market was not a factor to be taken into account. Compensation was to be measured by the disability due to the accident in a normal state of the labour market, without regard to ephemeral and abnormal conditions. On the facts found by the County Court judge, the miner was entitled to compensation for partial loss of earning capacity.

The appeal was allowed, and the case remitted to the County Court judge for further consideration.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] JUNE, 1927 [NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed a pronounced increase at the beginning of May, the gain being larger than that reported at the same date since 1920, which was the first year of the record. This statement is based on statistics tabulated by the Dominion Bureau of Statistics from returns sent in by 5,948 firms, each with a minimum of fifteen employees in all industries except agriculture, fishing and highly specialized business operations. The working forces of these firms aggregated 830,850 persons, as compared with 794,146 at the beginning of April. The employment index number (based upon the number of employees of the reporting firms in January, 1920, as 100) rose to over 4 per cent during the month, standing at 100.6 on May 1, as compared with 96.2 on April 1, and with 94.3, 90.8, 91.4, 83.3 and 84.1 on May 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed that the volume of business transacted during April, as indicated by the average daily number of placements in employment showed the substantial increase of 53 per cent over the previous month, while a decline of 5 per cent, due to fewer placements in farming, was recorded in comparison with April, 1926. At the beginning of May the percentage of unemployment among the members of local trade unions stood at 6.0 as compared with percentages of 5.7 at the beginning of April, 1927, and 7.3 at the beginning of May, 1926. The percentage for May is based on the returns received by the Department of Labour from 1,549 local trade unions with a combined membership of 164,948 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $10.76 at the beginning of May, as compared with $10.80 at the beginning of April; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918; and $7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 151.9 for May, as compared with 148.5 for April; 157.0 for May, 1926; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918.

The time loss due to industrial disputes in May, 1927, was greater than in April, 1927, but less than in May, 1926. Seventeen disputes were in existence at some time during the month, involving 4,772 workpeople, and resulting in a time loss of 20,766 working days. Corresponding figures for April, 1927, were: twelve disputes, 853 workpeople, and 10,082 working days, and in May, 1926, fifteen disputes, 4,018 workpeople and 59,591 working days.

Industrial Disputes Investigation Act, 1907

During April the Department received reports from three Boards of Conciliation and Investigation in connection with disputes involving certain employees of the Brompton Pulp and Paper Company, Limited, the Inverness Railway and Coal Company, and the British Columbia Telephone Company. Three new applications for the establishment of Boards were received, and the Board established in the previous month in connection with a dispute between the Inverness Railway and Coal Company and certain of their employees was completed. A full account of recent proceedings under the Act appears on page 604.

Combines Investigation Act, 1923

The hearing of evidence in the inquiry into the Proprietary Articles Trade Association was completed in Montreal on May 5, forty-three sessions in all having been held, in Montreal, Toronto, Winnipeg, and Lindsay. On June 7 and succeeding days, the case was argued before Mr. L. V. O'Connor, the Commissioner, by Mr. A. R. McMaster, K.C., who has been conducting the inquiry, and by the several counsel representing the Association. It is expected that the report of the Commissioner will be presented to the Minister of Labour during the course of the next month.

Procedure in connection with International draft conventions

New procedure was applied for the first time in connection with the discussions at the 10th session of the International Labour Conference. The innovation was the "double discussion" procedure, adopted at the 8th session on the recommendation of the Governing Body. Each question coming up for consideration is to be subjected to two distinct discussions. The first is of a general character, and at its close the conference decides by a two-thirds majority whether the question should be placed on the agenda of the following session. The second discussion takes place at the following session, which will vote on the adoption of a draft convention or recommendation. The plan is therefore that the first session holds a general discussion of principles, and the second session discusses definite proposals.

The "double discussion" procedure was adopted as a substitute for the "double reading" procedure which was first applied in 1925. This consisted in taking a vote on draft conventions at two successive sessions of the conference. It had the advantage of moderating the rapidity with which conventions were formerly adopted, and allowing more time for the full investigation of the questions at issue. In practice, however, the "double reading" plan involved serious difficulties, as substantial amendments were sometimes proposed on the second reading, and discussions that were supposed to be closed at the first session had to be re-opened and continued at the second. The question of changing the procedure once more was therefore referred to the Governing Body, which recommended the plan of double discussion now followed. The Director of the International Labour Organization in his annual report, states that the new system has all the advantages of the system which it replaces. It will make the proceedings more thorough and less hurried. After the general discussions and the suggestions which it may bring forth the conference will be able a year later to frame draft conventions or recommendations with full knowledge of the facts.

Male minimum wage in British Columbia

The Board of Adjustment which has charge of the administration of the Male Minimum Wage Act of British Columbia opened last month an investigation into wages and working conditions throughout the province, the intention being to apply the act to new industries and undertakings. (The first order of the Board, establishing a minimum rate of 40 cents an hour for the lumbering industry, was given in the LABOUR GAZETTE, October, 1926, page 948.) The Board is investigating the prevailing conditions of labour for workers in factories, hotels, restaurants and rooming houses, for janitors and elevatormen, and for store clerks and clerical workers. Advance notices of meetings are sent to employers and employees so that they may be prepared to lay before the Board any information that may assist in fixing a suitable minimum rate of wages for each class. The commissioners are considering whether to make one general minimum wage for all industries, or to fix separate rates for each. It is stated that the minimum wage for the lumber industry has affected about 9,000 employees, who formerly received less than 40 cents, some of them having been paid only 25 cents an hour.

Minimum wages and collective bargaining

In a pamphlet on the non-compulsory Minimum Wage Act of the State of Massachusetts Professor A. F. Lucas, of Clark University, reaches the conclusion that "it may well be that the most fruitful action which the government can take in the regulation of wages is not the fixing of definite minimum rates, but is the encouragement of what amounts to collective bargaining. The State," he continues, "can provide the machinery for those industries which have shown themselves to be incapable of settling their difficulties if left alone. In the last analysis this is virtually what is being done in Massachusetts."

Massachusetts was the first American State to enact a minimum wage law for women, and since the District of Columbia Statute was declared to be invalid it remains the only law of the kind in the eastern States. The Massachusetts law is also unique in the United States in being advisory instead of mandatory in its powers. This characteristic was shared only by a Nebraska statute which was repealed in 1919 after six years of inaction.

The non-compulsory nature of the Massachusetts law has drawn special attention to its provisions since the recent decisions of the Supreme Court of the United States declaring the compulsory laws of the District of Columbia and Arizona to be "repugnant to the constitution of the United States."

Professor Lucas's pamphlet (which is published as a supplement to the last volume of the Annals of the American Academy of Political and Social Science) describes the origin, contents, and results of the Massachusetts law. This law was the product of a general agitation for minimum wage legislation, which

reached its height between 1910 and 1915, and was caused by rising prices. It established a minimum wage commission, which in turn might establish a Board, representative of the parties concerned, in connection with any occupation in which the wages are found to be inadequate. The recommendations of the wage boards are subject to the approval of the commission. The commission has power to publish the names of non-complying employers as it sees fit.

This advisory or recommendatory feature has made the Massachusetts law unique among minimum wage laws. Compulsory powers were left out through the fear that they would render the law unconstitutional. As Professor Lucas says: "The public does not coerce an employer to pay any particular minimum wage, but directs the commission to ascertain what the minimum wage should be and then to inform the public as to those employers who are paying wages below this minimum." Minimum wage decrees have been established for eighteen industries in Massachusetts, employing over 80,000 women and girls in over 5,000 establishments, about one-fifth of the number of female wage earners in the State.

Answering the question whether mandatory powers are necessary to secure acceptance of minimum rates, Professor Lucas says: "Our conclusion on this point is that it is not. The minimum wage rates in Massachusetts have been generally accepted. The number of women not receiving wages in conformity with the decrees has been a small fraction of all women covered. The largest number of cases of non-compliance that the commission has had on hand at any one time has not been over 3,000. The total number of women under minimum rates, however, is close to 85,000."

The writer concludes by calling attention to the cessation of the agitation for minimum wage legislation, and to the greater stress laid in recent times on developing the means for collective bargaining.

Increases in number of industrial accidents

Marked increases in the number of industrial accidents during the past year are shown in the reports of the Ontario and Manitoba Workmen's Compensation Boards, reviewed elsewhere in this issue. Such increases, occurring in spite of concerted measures for greater industrial safety, are by no means confined to Canada, and have been the subject of numerous investigations in this country and in the United States and other countries. For example, in the June issue of *Industrial Canada* (published by the Canadian Manufacturers' Association) Professor Michell of McMaster University, Toronto, discusses the probable cause of the bad showing made by recent accident statistics. Two facts stand out, he thinks, in the annual figures of fatalities in Canada from 1904 to 1926, as reported by the Dominion Department of Labour; first, that fatal accidents fluctuate with activity in business; and, second, that the number of fatal accidents actually shows a relative decrease when the growth of industrial population is considered. Professor Michell points out however, that an increase in the volume of employment results in an increase of accidents in a higher ratio, and that if employment increases 10 per cent, accidents will increase more than 10 per cent, and *vice versa*. This statement agrees with the opinion of Mr. L. W. Hatch, Director of the Bureau of Statistics of the Department of Labour of the State of New York, which is quoted by Professor Michell from the LABOUR GAZETTE, February, 1926, page 148. "Accidents naturally increase faster than employment," Mr. Hatch wrote, "because increase in working forces brings out an increase of hazard arising out of the human element in accident causation." It is explained that there are two elements in accident causation, the mechanical and the human. The mechanical risks are disposed of once and for all by the provision of adequate safeguards for the machines, but the human causes call for continuous safety education, which must begin again every time additions are made to staffs.

Professor Michell also quotes with approval from a recent paper by Mr. Ethelbert Stewart, United States Commissioner of Labour Statistics (LABOUR GAZETTE, January, 1926, page 31), in which the following reasons are given for the growth in industrial accidents:

"First: In every recovery from a depression large numbers of new men are taken on and the accident rate for new men is always very much greater than for employees older in point of service;

"Second: There is a general speeding up of workers, both skilled and unskilled, a production per man hour increase which registers a greater number of accidents, and this would probably especially affect the accident rate among new men;

"Third: Better reporting;

"Fourth: During the War a great deal of safety work was done by a large number of firms and even where a safety engineer was not added to the personnel of the establishment, yet the care and safety of employees at work was very generally made a function of the welfare administration. Since the war

a great many of these positions have been abolished and much of the accident prevention work which requires a mechanical engineer has been thrown into the welfare departments presided over by sociologists."

Employers' share in rehabilitation of injured employees

The Ontario Workmen's Compensation Board, in its report for 1926, reviewed on another page of this issue, invites the co-operation of employers in "rehabilitating" their injured employees. The Board commends the work of the Ontario School of Occupational Therapy, an organization which developed from the work of the Department of Soldiers' Civil Re-establishment, experience having shown that disabled men could be helped to recovery by means of light occupations of a kind to engage their attention and interest.

In connection with industrial accidents which render the victims incapable of following their usual occupations the Workmen's Compensation Board has been using the School of Therapy to teach these men new trades. The Board also endeavours by means of special courses to re-establish men in industry in some position where their disability is not an insurmountable hindrance. In their report for 1926 the Compensation Board says:

"The Board desires to again emphasize the responsibility of employers for the casualties in their own industry and the obligation which is imposed upon them to see that their men who have been disabled are taken back to work and given suitable work at as early a date as possible, and would point out that accident costs can be very substantially reduced thereby and the morale of the employee maintained by as prompt a return to work as possible. Where this is not possible and it is necessary for the men to seek new forms of employment, the Board is, where the workmen are young and able to take commercial courses, paying the costs of a number of workmen to give them commercial courses, fitting them for office or clerical work. Others who are not suited for such work are being treated at the Ontario School of Occupational Therapy so that full use of the injured limb or member of the body whose functions have been impaired may be restored. Good work is being done by this school, the success of which is due very largely to the unselfish service of a number of surgeons and doctors and a Board of Directors who are carrying on at a minimum of cost very largely contributed by voluntary subscriptions. A number of aides are now being trained at the University of Toronto so that it might be possible in cities where a great number of employees are engaged to have local schools of occupational therapy where the employees could be restored much more quickly to industry by receiving instruction under these trained aides. This matter should be considered by employers of industry in the different cities and inquiries made as to whether accident cost cannot be reduced and the efficiency of their workmen increased by establishing such local classes."

Employers as working partners under Workmen's Compensation

The workmen's compensation acts of most of the provinces in Canada make provision for the payment of compensation to employers who work side by side with their employees. The Nova Scotia Act, for example, provides that "any employer in an industry within the scope of this Part (i.e. Part 1 of the Act) may be admitted on such terms and conditions and for such period and from time to time as the Board may prescribe as being entitled, for himself or his dependants as the case may be, to the same compensation as if such employer were a workman within the scope of this part." This phase of workmen's compensation was discussed at the last meeting of the International Association of Industrial Boards and Commissions when a paper on "Working Partners" was read by the chairman of the Idaho Board. In the discussion on this paper Mr. V. A. Sinclair, chairman of the Ontario Board, stated the practice of the Compensation boards in Canada. "In the provinces," he said, "we do not find any difficulty at all in extending the benefit of the act to employers as well as to employees. In Ontario any man who puts in a wage roll and asks to be covered must cover himself for not less than $1,200 and not more than $2,000. If he is willing to put himself on his payroll for $1,200 or $2,000 and pay his assessment on it, we do not see any reason why he should not receive the same benefits from state insurance as the men he employs. More often than not the carpenter who employs one or two men is worse off than the men he employs. He is anxious to have the same benefits of the act as the employees. We cover such men right along. The only difficulty we have run into is in connection with stevedores and longshoremen unloading boats. They take a contract to unload a boat at so much per bushel. They all work together; they have no head. We have to get them to give us a name. They will give us some such name as the Fort William Longshoremen. Then we try to strike an average basis and tax them on this

basis in connection with their systems. We try to cover them because they are really all labourers, employees, although they work together under one head and do not take wages. We find no difficulty—and we do not reduce it to an absurdity—in paying the employers as well as employees."

Labour turnover as cause of accidents

Mr. Alex. R. White, Chief Sanitary Inspector of Ontario, in a paper read at the recent convention of the National Safety Council at Detroit, referred to "Labour turnover" as one of the chief causes of accidents to workmen in the woods. A great proportion of new men cut themselves, or are injured in some manner, during the first two weeks of their employment. "Your new employee" he said, "comes to his job with insufficient training and in many instances has no knowledge of the use of edged tools, viz., the ax, saw, etc. He therefore makes mistakes which eventuate in accidents so that he is himself injured or is the cause of some one else being injured, perhaps fatally."

"My contention," Mr. White continued, "is that forest product industries are to-day, by reason of the extremely low rate of wages paid to workmen in the woods, the seasonal nature of the occupation, and the absence of city comforts and home life after working hours, being forced to accept only such labour as has already been rejected by the other more favourably situated industries in the country.

"Labour turnover may be caused by distasteful working conditions such as long hours, low wages and undesirable physical surroundings, and may easily be lowered by systematic effort to improve the conditions under which men live and labour, and also if some wholehearted effort is made to teach the new employee to carry on his work more skillfully and thus more intelligently.

"It does not appear possible to estimate correctly just exactly what percentage of turnover actually exists among lumberjacks in Ontario to-day. Camps drawing their quota of men from a farming community nearby seem to have succeeded in stabilizing their labour to a remarkable degree while others far removed from the railway and from settled territory have a turnover of easily two hundred per cent or even higher.

"This same state of affairs obtains to-day in most of our building trades. There are practically no more apprenticed carpenters, stonemasons or bricklayers, and as I see it little is being done to induce the young man starting out in life to apprentice himself to any of these trades. Thus we find such occupations to-day filled up with what is known as the handy-man who is able to carry on well enough at rough work, but who falls down badly when something out of the ordinary is to be accomplished.

"There is this advantage with the building trades, however, that once the handy-man becomes proficient with the tools of his craft to hold his job, you find him back on the work year after year. This is not the case with the men employed in the lumber woods. The men hired by agents in our large cities come to the camp from necessity not from choice, and apparently leave for good at the first available opportunity. Thus we find that in Ontario to-day we are depending much more than is now being appreciated upon a remnant of the old guard of experienced woodsmen, which cannot be more than one quarter of the men required to act as a leaven among the thirty thousand men required each winter."

Welfare work as remedy for labour turnover

The *Canadian Textile Journal* is publishing a series of articles on "industrial management" written by Mr. James A. Coote, assistant professor of mechanical engineering at McGill University, Montreal. Professor Coote finds that the employment departments and "welfare" undertakings of large industrial concerns owe their existence to the discovery about fifteen years ago of the magnitude and importance of "labour turnover." "In the year 1912," he says, "Mr. Magnus Alexander of the General Electric Company made an investigation of the extent and cost of labour turnover. He found that twelve factories, which at the beginning of the year had 37,274 employees, increased their working force during the year by 6,697 employees, but during that period 42,571 people were hired, so that 35,874 must have been dropped from the payroll during that time. The smallest factory employed 300 people and the largest 10,000. It was found that of the employees engaged during this year twenty-seven per cent of them had worked in them before.

"The publication of these figures," Professor Coote continues, "caused a great stir in the industrial world and the leaders immediately took steps to cope with the problem of reducing the turnover. The first step was the organization of the employment department and greater care in the selection and placement of employees. But while this worked some improvement it did not go far enough. Employers then turned their attention to "Welfare Work," which, generally, was a well-meant

endeavour to minister to the needs or desires of the workers so that they would remain on the job"

Increased productivity of labour

The Federal Reserve Board of the United States now publishes an index of industrial production, commencing with the year 1919, and estimated to cover about four-fifths of all industrial production in the country, the new index being related to indexes which existed previously. It is estimated that in the twenty-six years from 1899 to 1925 the volume of production in the United States increased by 175 per cent. In the same period the number of wage earners increased 60 per cent, and the average production of each wage earner increased 50 per cent since 1899, and 33 per cent since 1921.

Commenting on these figures Professor Irving Fisher, of Yale University, says: From the hewing of wood and the drawing of water, the sweat and toil of the old slave populations, man has thrust his burden upon the machine, and now watches the index gauges reveal their welcome increases in *per capita* output. Power has been substituted for human labour. Moreover, electric power is taking the place of steam-power. Oil is being used instead of coal. The willingness of the people to take standardized articles permits large-scale operations and mass production. . . . American unionism has taken kindly to quantity production; as a result American employers pay their workingmen double and treble what the handicrafts unions of England and the continent would dream of demanding. This tremendous productive development has been built up by our great internal market."

Displacement of labour by machinery

Some of the consequences of the payment of high wages in American industry are described in the opening article in the current number of *Industrial Management* (New York), contributed by Henry H. Williams, the manager of a large factory at Philadelphia. The writer, basing his assertions on experience of conditions in this and other factories, states that the high level of wages during the war, and the subsequent continuance of war rates, forced employers to apply machinery to tasks formerly done by hand. "Fifteen years ago our factory was filled with hand workers. Now there are scarcely any of them left and the few machine operators who have replaced them turn out a greater volume of work." After comparing conditions in Great Britain and in other countries where wages are lower, and employers therefore have not been induced to substitute machinery for hand labour, Mr. Williams concludes that "high wages seem everywhere to be an advance requisite to the adoption of machinery." Increased outlay on wages, however, is more than balanced by the increased productivity of the machines. "In spite of the fact that wages in our factory have more than doubled in the past fifteen years, our manufacturing costs are actually lower now than they were at the beginning of that period. High wages, forcibly thrust upon us by the war, and always opposed by those in charge of our business, have lowered our manufacturing costs, by making us apply machinery and power to tasks formerly done by hand."

As a further illustration of the principle that high wages encourage the use of machinery and actually result in lowering the cost of production, the writer mentions that "a couple of years ago we installed about seventy-five thousand dollars worth of machinery in one of the departments of our plant. This machinery was of the most up-to-date type and was installed in accordance with the best current practice. This year we find that by spending a few thousand dollars on changes we can nearly double the productive capacity per operative. This, of course we shall do, but we also know now that with a very considerable re-design of this machinery we would be enabled again to double the productivity per operative. This latter step is indefinitely delayed because of the expense involved, but but if our wage scales were doubled we would undertake it at once."

Mr. Williams states that each time that he has laid off people who have been displaced by machinery he has wondered where they turn for employment. They must go elsewhere, into other industries, and the question arises whether or not other industries will continue to keep pace with mechanical progress and improvement. He concludes by appealing to bankers to forget "their well-known fondness for old and well established enterprises," and to learn to prospect in new fields and foster industries whose limitations have not been reached. "They must pave the way for progress by providing employment for the people whom progress is releasing."

Labour unions as partners in industry

The Central Labour Union and Labour College of Philadelphia held a conference during April on the "Elimination of Waste in Industry," the speakers including not only union members, but also industrial engineers and public economists. All were agreed in

observing evidences of a new scientific spirit now said to be transforming industrial relations. The *Survey* (New York) states that "the best papers presented at the Philadelphia conference were read by local labour leaders who were masters of the new techniques and were eagerly putting their technical skill at the service of industries in the perfection of which they took pride." On the other side it is stated that the new attitude of the scientific managers was equally impressive. For example, a member of the Taylor Society, in advocating joint committees for job analyses, stated his opinion that "the joint-job-analyses committee in any industrial establishment needs the reinforcing strength of the workers' regular trade union." The *Survey* anticipates that a "new industrial epoch" will begin if the spirit of accommodation and co-operation that were evident at the conference on the part of both organized labour and management prevails and becomes dominant in American life.

The preference of labour for co-operation rather than militant tactics is expressed by President William Green, of the American Federation of Labour, in the May issue of the *American Federationist*, as follows:—

"The essence of partnership (that is, between employer and employee) is mutuality of confidence, responsibilities and duties. Either member of the partnership may be handicapped in what he may do by shortcomings of the other. So the trade-union movement is prevented from rendering maximum service when employers do not enter into agreements with union representatives so that there may be clearly defined rights and conditions of employment which beget confidence, safeguarded by an agency controlled solely by the workers. Upon such a foundation may be developed the technique and agencies of co-operation.

"The American Federation of Labour has declared that the materials of increased productivity are essential to sustained increases in standards of living, and that the union holds itself ready to do its part in working out better methods and plans for production. Where employers are ready to make co-operation possible, trade unionists are ready to do their part.

"The development of the methods of peace may grow out of co-operative relations. These methods cannot be achieved in a year or a decade. Peace does not mean the absence of problems, but the finding of methods to solve problems on a basis of intelligence. They will develop out of experience that will test patience and strength of purpose, but if employers and unions have confidence in each other and are willing to follow facts and principles, the trade unions will indeed have the distinction and the satisfaction of showing the way to constructive relations between those who work together in industry."

Unemployment relief in the printing trades

On June 1 the Printing Pressmen and Assistants' Union No. 23 in New York put into effect a new arrangement for limiting the volume of seasonal employment during the slack summer months. The press feeders and assistants who work twenty days each month agree to take one day off in that period to make room for a competent substitute. Night men usually working eighteen nights in the four weeks' period take one of these nights off. It is hoped that this plan will give work for about two or three days a week to substitutes during the summer. The plan has been carefully worked out so as to affect as little as possible the smooth and efficient operation of the shops in which substitutions are to be made. Several forms have been prepared by the Labour Bureau, Inc., which has co-operated with the union in putting the new arrangements into effect. Its success depends entirely on the shop chairman and the shop foremen, who are responsible for keeping the records of lay-offs and substitutions. Shop chairmen and other persons concerned are subject to discipline by the Executive Board of the Union in case of failure to comply with the regulations for the days off or of failure to keep the required records.

British Whitley Councils claim power to fix wages

A proposal that any agreement as to wages or other conditions that is reached by a Whitley Council should, on the application of the council, be made legally applicable to the whole of the industry concerned, was put before the British Government recently by the Association of Joint Industrial Councils (a bulletin on "Joint Councils in Industry" was published by the Department of Labour of Canada as a supplement to the LABOUR GAZETTE, February, 1921, and a review of the nature and work of these councils in Great Britain was given in the LABOUR GAZETTE, October, 1920). The association has advocated this proposal for several years past, experience having led the members to believe that the future of the councils is dependent upon securing the observance of "Whitley Council" conditions, not only by the firms represented on the councils, but by others who, because unaffiliated, are under no obligation to pay

the same rates of wages, and are, therefore, in a position to intensify competition. One member of the delegation recalled that in the first instance Whitley Councils were blessed by the government of the day, and the Ministry of Labour not only circulated the Whitley scheme and the Whitley report, but conducted a campaign throughout the country among interested parties. Since then, he said, "Whitleyism had been left severely alone. During periods of industrial trouble there had been many difficulties. He cited the case of the road transport industry, in which the Industrial Council went out of existence because of the competition within the industry and the bad state of organization among the employers. When the industrial council fixed a wage rate, the non-associated employer refused to pay it. This intensified competition and the employer who wanted to pay a fair wage was unable to do so. A movement to reduce wages was followed by strikes and the complete collapse of the industrial council. As an instance of the value of Whitleyism, he said that there had not been one strike in the furniture removal industry during a period of eight years.

Dr. David Jamieson, former speaker of the Legislature of Ontario has been appointed chairman of the Mothers' Allowance Commission of the province in succession to the Rev. Peter Bryce, who retired from this position early in May.

The Minimum Wage Board of British Columbia recently investigated the wages and other conditions of labour of waitresses in restaurants in the province.

Letters patent were issued in April under the Ontario Companies Act, to the Labour League Mutual Benefit Society with headquarters at Toronto, with power to transact any class of insurance for which a mutual benefit society may be licensed under the Ontario Insurance Act.

By an order in council under the Vehicles and Highway Traffic Act of Alberta the fee for a chauffeur's license in the province has been fixed at $3.

Government Bills have recently been introduced in the Cuban Parliament dealing with the following subjects: workers' pensions, seamen's pensions, establishment of an arbitration court, the eight-hour day, pensions for employees in private commerce, pensions for journalists and the printing and allied trades, pension funds for salaried employees and manual workers in the sugar industry, and the obligation of employers to recognize the legal personality of trade unions. The object of these Bills is to carry out the wish expressed by General Machado, President of the Republic, in his message to Parliament urging the speedy establishment of labour legislation of such a kind as to satisfy the aspirations of the Cuban workers.

The Queensland Arbitration Court (Australia) recently allowed the appeal of a worker's widow against the decision of a lower court refusing to allow her compensation for the loss of her husband, a carpenter's labourer, who died as the result of a chill contracted in the course of his employment. The doors of the building where the deceased workman was employed were kept unfastened, exposing him to intermittent draughts. The employer admitted that the conditions favoured the contraction of a chill, but contended that they were usual in the course of a carpenter's employment. The court allowed the claim under a section of the act which extends compensation to any "accident" at the place of employment, whether or not such accident arose out of, or in the course of, employment.

The Hon. Chief Justice Harvey, the commissioner appointed by the government of Alberta to conduct an inquiry into conditions at the McGillivray Mine, Coleman, Alberta, is stated to be waiting for a favourable time to commence the investigation. The delay was due to repeated slides which blocked some of the main passages in the mine, much clearing work being necessary before the investigation can proceed. The Chief Justice was appointed to make the inquiry following an explosion in the mine last November, when ten men lost their lives (LABOUR GAZETTE, April, page 377).

The Toronto Board of Education are considering the recommendation of a committee that employees who have been in the service of the Maintenance Department for five years or more should receive one week holidays. These employees are engaged by the hour, and have not been eligible hitherto for yearly vacations. About 109 employees have been five years or more in the Maintenance Service of the Board. The cost of granting holidays with pay would amount to about $694 per day.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of May was reported by the Superintendents of the Employment Service of Canada to be as follows:—

The fishing industry in the province of Nova Scotia reported good catches. Although the logging industry in this province was seasonably quiet, some workers were being placed. The manufacturing industries showed normal activity, but the iron and steel group reported a temporary slackening in some districts. The coal mining industry was fairly active, with a rather satisfactory production reported. Farmers were busy on the land. The building and construction group were busy in Halifax, with more projects in sight; elsewhere, conditions were fairly quiet Transportation was commented upon as being fair, while trade showed some improvement.

In New Brunswick farm work had been held up by the weather, but the farmers were fairly busy. The fishing industry recorded rather satisfactory activity. In the logging industry, with conditions quite active for the season, there was some demand for workers. The manufacturing industries in this province were well engaged, with the lumbering group rapidly attaining its usual summer level. The amount of building construction under way was not very great, but road work was brisk, and railroad maintenance was showing some activity. Transportation was stated to be satisfactory and trade good.

The demand for farm workers as registered at the Quebec offices was fair. The calls for workers for the logging industry were satisfactory for the time of year. In this province the general situation as regards manufacturing was normal, with the printing trades and the rubber and textile industries mentioned as active. Although weather had interfered with construction work, this industry was busy, with a satisfactory number of vacancies being registered at the employment offices. Trade was good. While the general situation throughout Quebec was satisfactory the backward weather had interfered with those industries carried on out of doors.

Substantial increases in the demands for farm help were reported from a number of the Ontario employment offices. Manufacturing industries were operating steadily, with fairly high levels of production. Although an improvement had been shown in construction activity the weather was holding back work of this nature. In the northern portion of the province the mining industries were normal, with a normal number employed but not many additional workers were being taken on. The usual shortage of female domestics at practically all points in Ontario was reported.

The weather in Manitoba had been holding up farm work, with the result that at the end of the month there were not many demands for workers, while plenty of applicants were registered. In the building and construction industry also the weather had been retarding operations. However, in Winnipeg this latter industry was increasing in activity, and a fair number of building projects were in sight. Some logging placements were being made by the Winnipeg employment office. With a few local shortages of female domestic workers the demand for such workers was rather slack, and generally speaking there seemed to be sufficient applicants.

A decline in the demands for workers and plenty of applicants for farm work, with surpluses in some centres, were reported from Saskatchewan. The weather being backward, construction was not gaining in momentum to the same extent as ordinarily at this time of year, although there were some demands for extra gang workers reported from the offices. With no pronounced shortages of female domestic workers reported in Saskatchewan, owing to the fact that the demands for such workers were not exceptionally heavy, some small local shortages did exist. Weather having interfered with the opening up of work generally, employment conditions in the province were not the best, and surpluses of applicants in some groups were reported at different centres.

In the province of Alberta it appeared that weather conditions had been more favourable for outside work, with the result that seeding was further advanced, and hence, spring farm help having mostly been hired, the demands to the employment offices for workers of this class were declining. With activity reported as favourable in building construction, road work, and extra gang work, several placements were being made in the construction industry. Although the production of the coal mining industry was not less than usual for the season, several miners were unemployed. The demand for female domestics was not exceptionally heavy and no acute shortages were reported.

Although two or three points in British Columbia reported making placements in the logging industry, this line was not very active. The metal mining industries were normal, with some increases reported, but not much of a demand for workers. The volume of construction being carried on throughout the province

was satisfactory, but while some centres reported this industry as very busy, no shortages of tradesmen were apparent. Employment conditions throughout the Coast Province, generally speaking, were fair, though some surpluses of labour, mostly of the "transient" type, existed.

EMPLOYERS' RETURNS

There was an important increase in employment at the beginning of May, when the 5,948 firms reporting to the Dominion Bureau of Statistics increased their staffs by 36,704 persons to 830,850. This was the largest gain indicated on May 1 in any year since the record was begun in 1920. The index number (with January, 1920, as 100), stood at 100.6, as compared with 96.2 on April 1 and with 94.3, 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Greater activity was reported in all provinces, but Quebec and Ontario registered the largest increases. In the maritime Provinces, there was a considerable advance, contrasting with the decline indicated on May 1 last year. Manufacturing and construction showed the most pronounced improvement, while transportation was seasonally slacker. In Quebec, manufacturing, transportation, construction, services, trade, mining, communications and logging registered large additions to payrolls, those in the last named being due to river-driving operations. Employment was much brisker than on the corresponding date a year ago, when the increase was smaller. In Ontario, the expansion was the greatest reported on May 1 in the last eight years, and conditions were decidedly better than in the spring of any other since 1920. Manufacturing, construction and transportation recorded the most extensive gains. In the Prairie Provinces, manufacturing, transportation, services and construction showed heightened activity, the general expansion exceeding that reported on May 1 in any of the last three years. In British Columbia, on the other hand, the improvement was not so pronounced as in the spring of 1926, or of 1925. The greatest gains were in manufacturing, logging, transportation, trade and construction.

The eight cities for which separate returns are tabulated showed increased activity, Montreal and Toronto registering the most marked gains. In Montreal, transportation, construction, trade and manufacturing recorded the largest advances. In Quebec, there was a general increase. In Toronto, manufacturing, transportation, construction and trade made important increases in personnel. In Ottawa, lumber mills and construction registered the bulk of the improvement. In Hamilton, manufacturers were somewhat quieter, but there was seasonal activity in construction. In the Border Cities, considerable recovery was shown in automobile factories, although some of the large plants were working on short time. In Winnipeg, construction reported the most noteworthy expansion. In Vancouver, manufacturing, transportation and trade registered the greatest increases.

An analysis of the returns by industries shows that important advances were made in practically all groups except logging in which there was a considerable seasonal loss, in spite of river-driving operations in the Maritime Provinces and Quebec. The improvement in manufacturing was especially marked in the lumber, iron and steel, fish-packing, pulp and paper, rubber, tobacco and malt liquor, building material, electric current and some other groups. Mining, communications, transportation, services, trade, construction and maintenance also made important advances, the gains in the last named being particularly noteworthy.

An article elsewhere in this issue gives in some detail the employment situation at the beginning of May.

TRADE, UNION REPORTS

Unemployment as reported by 1,549 local trade unions at the close of April with an aggregate membership of 164,948 persons showed a slight increase as compared with March, the percentage of idleness standing at 6.0 in April as against 5.7 per cent at the end of the previous month. The inactivity in the Province of Quebec among the garment trades was mainly responsible for the adverse situation reported, although the coal mines of Alberta also contributed in a lesser degree to the unemployment. In the Nova Scotia coal mines there was considerable improvement, and a greater volume of employment was also afforded in building and construction, both in Quebec and in Ontario, but the gains were not sufficient to offset the other reductions. The situation was better, however, than in April last year when the percentage of unemployment stood at 7.3, the most noteworthy increase in employment being in Nova Scotia where the coal mines registered heightened activity.

A report in more detail of the conditions existing among local trade unions at the close of April will be found elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS

During the month of April, 1927, the offices of the Employment Service of Canada made 31,254 references to positions, and effected a total of 29,949 placements. The placements in casual employment during this period were

9,465, while those in regular work were 16,681 of men and 3,803 of women, a total of 20,484. Employers notified the Service of 33,199 vacancies, of which 22,238 were for men and 10,961 for women. The number of applications for work was 41,077; those from men were 30,039 and from women 11,038. A comparison of the reports for this period with those of the preceding month showed a substantial increase in the volume of business transacted, while a nominal decline was shown in the work carried on in the office of the Employment Service as compared with that of April, 1926, the records for March, 1927, showing 24,657 vacancies offered, 35,993 applications made, and 21,898 placements effected, while in April last year there were recorded 36,166 vacancies, 42,029 applications for work, and 31,772 placements in regular and casual employment. A report in detail of the work of the offices for the month of April, 1927, may be found elsewhere in this issue.

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending May 28, 1927, and corresponding previous records. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the recent movements of trade and industry are given in the table on page 601.

The Dominion Bureau of Statistics reported that the weighted index of the physical volume of production in Canada was 149.3 in March, representing a gain of 9 points over the preceding month and 19 points over the same month last year. The index in March was at the highest point in the post-war period and probably in the history of the country. The index is the most comprehensive indicator of the volume of Canadian business, being a weighted average of 12 group indexes, several of which are in turn composites of a number of factors. Among the group indexes available at the time the report was prepared, carloadings, construction, imports, exports and shares traded, after adjustment for seasonal variation, showed an increase in April over the preceding month, while forestry and bank debits showed a decrease.

A considerable part of the increase in the index of physical volume of business noted above was due to exceptional activity in most of the branches of manufacturing. Each of the 16 commodities, with one exception, upon which the index of manufactures is based, showed, after seasonal adjustment, greater volume in March than in the monthly average of the base period from 1919 to 1924. The production of automobiles showed a gain of 126 per cent over the base period, while imports of petroleum and rubber also indicated the heavy demand in connection with the use of the automobile. The production of newsprint was the greatest in the history of the industry. The imports of cotton and wool indicate active conditions in textile mills, or the making of provision for future requirements. While the statistics for April were not complete at time of writing, it appeared that operations were well maintained during the month, gains being recorded in cotton imports, lumber exports and the primary iron and steel industry.

The Bureau of Statistics also reported that production of coke pig iron in Canada amounted to 77,240 long tons in April, an advance of 2 per cent over the 75,637 tons of March and 14 per cent over the output of 67,607 tons reported for April a year ago. The increase was accounted for by the greater tonnage of foundry iron produced mostly for sale; production of this grade at 11,250 tons was almost double the March output of 5,729 tons. For the four months ending April the cumulative production of pig iron in Canada was 255,289 tons, an increase of 12 per cent over the 227,248 tons produced during the corresponding period of 1926. As no additional furnaces were blown in during the month and none blown out or banked the same six furnaces were in blast on April 30 as at March 31. Active furnaces in April having a daily capacity of 2,375 long tons per day or 47 per cent of the total capacity of all blast furnaces in Canada were located at the following points: 2 at Sydney, N.S.; 2 at Hamilton, Ont.; and 2 at Sault Ste. Marie, Ont. The production of ferro-alloys consisting mostly of the grade having a high manganese content dropped 18 per cent to 2,747 tons in April from 3,331 tons in March. Small quantities of ferrosilicon were also produced. The production of steel ingots and castings in Canada during April at 109,107 tons showed an increase of about 2 per cent over the March figure of 107,381 tons. In April last year the output was 79,936 tons.

Coal Production.—Full statistics of coal production during April are not yet available. The output of coal from Canadian mines during March was one per cent more than the production for the preceding month, and nine per cent greater than the average for March in the past five years. The figures were 1,401,278 tons in March as against 1,377,173 tons in February, and an average of 1,276,752 tons during the five preceding years. The number of men employed in the coal mines of Canada, working underground and on surface respectively during March, 1927, were, by provinces, as follows:—

Nova Scotia, 10,974 underground, and 2,345 surface, as compared with 11,121 underground, and 2,321 surface for February, 1927; Alberta, 6,333 underground and 2,254 surface, as compared with 7,680 underground and 2,499 surface, for February, 1927; British Columbia, 3,553 underground and 1,550 surface, as compared with 3,639 underground and 1,546 surface, for February, 1927; New Brunswick, 479 underground and 121 surface, as compared with 449 underground and 118 surface, for February, 1927, and Saskatchewan, 374 underground and 94 surface, as compared with 456 underground and 115 on surface for February, 1927, making a total during March of 28,077, of whom 21,713 worked underground and 6,364 on surface, in comparison with 23,345 in the previous month working underground and 6,599 working on surface. Production per man was 49.9 tons in March as against 45.9 tons per man in February. During March the production per man per day was 2.4 tons, being the same as in February. The tonnage lost was largely due to "lack of orders."

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of April, 1927, amounted to $18,512,196, as compared with $11,646,227 in the preceding month, and with $19,044,499 in the corresponding month last year.

The *McLean Building Review* estimates the total value of the construction contracts awarded in Canada in May, 1927, at $46,758,500. Of this amount $16,878,100 was for residential construction work; $16,502,700 came under the heading of business building; contracts for public works and utilities were awarded to the value of $10,006,400, and industrial construction amounted to $3,371,300.

The apportionment of contracts awarded by provinces during May, 1927, was: Ontario, $19,618,100; Quebec, $18,125,000; Prairie Provinces, $5,395,300; British Columbia, $2,229,200, and the Maritime Provinces, $1,390,900.

The "contemplated new construction" in Canada during May, 1927, according to the same *Review,* totalled $43,122,600, $16,857,600 of this amount being for residential building; $11,488,700 for business building; $3,178,500 for industrial building, and $11,597,800 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

EXTERNAL TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in April, 1927, the merchandise entered for consumption amounted to $74,297,628, as compared with $110,581,152 in March, and with $67,801,253 in April, 1926. The domestic merchandise exported amounted to $77,337,964 in April, 1927, as compared with $105,605,107 in March, and $60,166,868 in April, 1927.

The chief imports in April, 1927, were: Iron and its products, $22,647,564 and fibres, textiles and textile products, $13,109,035.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $33,715,152, and wood, wood products and paper, $16,842,041.

Strikes and Lockouts

The time loss due to industrial disputes in May, 1927, was greater than during April, 1927, but less than during May, 1926. There were in existence during the month seventeen disputes, involving 4,772 workpeople, and resulting in a time loss of 20,766 working days as compared with twelve disputes in April, involving 853 workpeople and resulting in a time loss of 10,082 working days. In May, 1926, there were on record fifteen strikes, involving 4,018 workpeople and resulting in a time loss of 59,591 working days. One of the strikes and lockouts commencing prior to May terminated during the month as did eight of the strikes and lockouts reported as commencing during the month. At the end of May, therefore, there were on record eight strikes and lockouts, affecting 376 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were again slightly lower. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $10.76 at the beginning of May, as compared with $10.80 at the beginning of April; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918; and $7.43 for May, 1914. Besides a seasonal decline in the prices of eggs, milk and butter, the prices of potatoes, beans, evaporated apples and tea were somewhat lower, while beef, mutton, fresh pork and bacon advanced. Including the cost of fuel and rent with that of foods the total budget averaged $20.95 at the beginning of May, as compared with $21.02 for April; $21.54 for May, 1926; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; $26.92 for July, 1920 (the peak); $20.09 for May, 1918; and $14.21 for May, 1914. Fuel was slightly lower, due to lower prices for coal. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 151.9 for May, as compared with 148.5 for April, 157.0 for May, 1926; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918. In the classification according to chief component materials two of the eight main groups advanced, while four declined and two were practically unchanged. The Vegetables and their Products group and the Fibres, Textiles and Textile Products group advanced, the former due to substantially higher prices for grains, flour and potatoes, and the latter due mainly to higher prices for

cotton. The groups which declined were: the Animals and their Products group, higher prices for cattle, beef and eggs being more than offset by lower prices for hogs, sheep, mutton, mess pork, milk and butter; the Non-Ferrous Metals group, due to lower prices for silver, lead, tin, spelter, solder and antimony; the Non-Metallic Minerals and their Products group, because of reductions in the prices of gasoline and coal oil; and the Chemicals and Allied Products group. The Iron and Its Products group and the Wood and Wood Products group were practically unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MAY, 1927

DURING the month of May the Department received the reports of three Boards of Conciliation and Investigation established to deal with disputes between (1) the Brompton Pulp and Paper Company, Limited, and certain of its employees being members of Local 98, International Brotherhood of Pulp, Sulphite and Paper Mill Workers; (2) the Inverness Railway and Coal Company and certain of its miners; and (3) the British Columbia Telephone Company and certain of its employees being members of Locals 230 (Victoria, B.C.) and 310 (Vancouver, B.C.) of the International Brotherhood of Electrical Workers.

Applications received

During May three applications for the establishment of Boards of Conciliation and Investigation were received, as follows:—

(1) From certain employees of the Winnipeg Electric Company being motormen, conductors and busmen, members of the Street Railway Employees' Unit, One Big Union. The application, which was received in the Department on May 7, was defective at certain points, and an amended application was submitted on May 21. The differences in question related to the demand of the employees for a wage increase of three cents an hour and certain alterations in working conditions. Efforts of the Minister of Labour were effective in bringing about a renewal of negotiations, during which the Company offered the employees concerned a general increase of one cent per hour each year for three years, together with other improvements in working conditions. The offer was accepted by the employees and a three-year contract was signed, Board procedure being accordingly rendered unnecessary.

(2) From certain employees of the Hamilton Hydro Electric System, being members of Local 138, International Brotherhood of Electrical Workers. The number of employees affected by the dispute was said to be 24 directly and 15 indirectly. The points at issue pertained to the employees' request for increased wages and changed working conditions. The dispute not relating to employment on work or business within the legislative authority of the Parliament of Canada, a Board could be established only by mutual consent of the parties concerned. The employer's consent being refused, no Board was established.

(3) From firemen in the employ of the Corporation of the City of Winnipeg. The number of employees affected by the dispute was given as 242. The dispute grew out of the employees' request for increased wages and certain changes in working conditions. The industry in question not being one to which the Industrial Disputes Investigation Act primarily applies, a Board could be established only by mutual consent of the parties concerned. At the end of the month the Department had not been as yet informed if joint consent was forthcoming in this case.

Other Proceedings Under the Act

A Board was completed early in May in the case of a dispute between the Inverness Railway and Coal Company and certain of its miners. The Reverend Dr. John Shaw of Halifax, N.S., was appointed chairman on the joint recommendation of the other members of the Board, Messrs. R. S. McLellan, Sydney, N.S., and Angus L. Macdonald, Halifax, N.S., nominees of the employer and men, respectively. The Board submitted its report during May and its text is included in the present article.

Report of Board in Dispute Between The Brompton Pulp and Paper Company, Limited, and Certain of Its Employees

On May 13 the Minister received an unanimous report of the Board of Conciliation and Investigation established to inquire into certain matters in dispute between the Brompton Pulp and Paper Company, Limited, and certain of its employees being members of Local 98, International Brotherhood of Pulp, Sulphite and Paper Mill Workers. The company had consented to refer to a Board the applicants' claim that certain employees had been dismissed by the Brompton Pulp and Paper Company, Limited, because of their membership in a labour union. Twenty-five employees were said to be directly affected by the dispute, and five hundred indirectly. The personnel of the Board was as follows:—Mr. W. A. Dowler, K.C., Fort William, Ontario, Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Messrs. Emile Rioux, K.C., Sherbrooke, P.Q., and J. T. Foster, Montreal, P.Q., the employer's and employees' nominees, respectively. The report of the Board embodied the terms of an agreement signed by both parties concerned, which disposed of all the points at issue.

Report of Board

EAST ANGUS, QUE., May 10, 1927.

To the Honourable
The Minister of Labour,
Ottawa, Canada.

After having had a number of sittings of the Board of Conciliation and Investigation appointed under the Industrial Disputes Investigation Act of 1907 and Amendments in respect to the dispute between the "Brompton Pulp and Paper Company Limited" and its employees, members of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers, No. 98—in respect of a claim on the part of the applicants that certain employees have been dismissed and refused employment because of their membership in the labour union, the undersigned members of the above referred to Board of Conciliation and Investigation beg to report.

That, as a result of conferences between the Board and the representatives of the employees of the Company and representatives of the Company and with the applicants the following agreement has been arrived at between the employees of the Company and the Company and agreed to by the two sides of the controversy or dispute above referred to, and the Board has, by reason thereof, been relieved by the applicants of the necessity of any finding on the particular point referred to the Board, and this report has been signed by the representatives of the Company and by the applicants referred to, as well as by the Members of the Board.

The agreement referred to is as follows:—

It is agreed on behalf of the employees of the Company and by the employees that no propaganda favouring the International Brotherhood of Pulp, Sulphite and Paper Mill Workers or any other union shall be carried on in the buildings or on the property of the Company, and that no improper pressure shall be put upon any employee of the Company by any other employee of the Company to join such International Brotherhood or any other union, and the Company and its management agree on its part that there will be no discrimination in employing or retaining in employment between union and non-union employees on that ground or in advancement in employment or otherwise.

The Company and its management also agree to reinstate in employment, as nearly as possible as before, all the employees of the Company who have been laid off since the first of the year, as fast as the same may be done and as to all within thirty days, with the sole exception of those who have been guilty of direct personal antagonism to the Company or to the management of the Company.

(Sgd.) W. A. DOWLER,
(Sgd.) EMILE RIOUX,
(Sgd.) J. T. FOSTER,
Members of the Board.

(Sgd.) FÉNÉLON PICHETTE,
(Sgd.) EGIDE THÉRIAULT,
Applicants.

BROMPTON PULP AND PAPER CO., LIMITED,
Per (Sgd.) J. A. Bothwell, on behalf of the Management

Report of Board in Dispute Between The Inverness Railway and Coal Company and Certain of Its Miners

The Minister received on May 23 the findings of the Board of Conciliation and Investigation established to deal with a dispute between the Inverness Railway and Coal Company and certain of its miners. The application, which had been supported by the Mayor and Board of Trade of the town of Inverness, who considered the situation to be quite serious, had protested against an alleged lockout of employees by the employing company and a reduction in wages. The number of employees directly affected by the dispute was given as 270.

Investigation by the Board showed that the applicants belonged to the One Big Union, while other employees, members of the United Mine Workers of America, had on April 14 signed an agreement with the company providing for a closed shop and accepting a reduction in wages. The Board report, which was signed by the Reverend Dr. Shaw, Chairman, and Mr. Angus L. Macdonald, the employees' Board member, recommended that the members of the One Big Union be allowed to return to work without any condition of union affiliation attached; that within three months there should be a plebiscite, the union receiving the majority of votes to be the only organization recognized and to continue the agreement of April 14 with respect to wages, hours of employment and working conditions. Mr. McLellan, the company's Board member, submitted a minority report, recommending the immediate fusion of both organizations in the United Mine Workers of America. Advice received at the close of the month was to the effect that the employees making the application for a Board had returned to work, a settlement having been reached between the parties concerned. The text of the majority and minority reports of the Board follows.

Report of Board

Re Industrial Disputes Investigation Act, 1907, and Re Differences arising between the Inverness Railway and Coal Company and certain of its miners.

The Hon. PETER HEENAN, M.P.,
Minister of Labour,
Ottawa.

SIR,—In compliance with the commission dated April 27, 1927, establishing a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act, 1907, in connection with a dispute between the Inverness Railway and Coal Company as Employer and certain of its miners as Employees, we have the honour to report:

The Board assembled at Inverness on the morning of Wednesday, May 18, and after a statement by the Chairman of the purpose for which the Board was appointed, was sworn in by the Stipendiary Magistrate of the town. It was the unanimous judgment of the Board that the best way of accomplishing the purposes for which it was appointed, set forth in the Act as "Conciliation and Investigation," was to use its utmost endeavours to bring about an amicable settlement of the dispute through private conference with all the parties involved.

With this end in view four days were spent in conference with representatives of the company, of the non-U.M.W.A. employees, and of the U.M.W.A. employees, in course of which the following facts were brought to the Board's attention, and, after investigation, were accepted by it as the relevant facts in the case:—

1. In the year 1924 and for some years previous thereto all employees of the Inverness Railway and Coal Company at Inverness belonged to the United Mine Workers of America (U.M.W.A.), and from October of that year operated on what is called the "Open Shop" arrangement, that is to say, without any requirement that all employees should belong to the U.M.W.A. organization. Towards the end of that year (1924) internal dissensions arose within the local union of the U.M.W.A. and a vote was taken on December 30 of that same year to ascertain whether employees wished to remain in the U.M.W.A. or to organize a branch of what is called the "One Big Union" (O.B.U.). The result of this vote was that by a substantial majority it was decided to form a local branch of the "O.B.U." and for two years thereafter, 1925 and 1926, both organizations functioned amicably side by side in Inverness.
2. In 1927, and in February of that year, notice was sent out by the Company of a proposed reduction in wages, this to become effective on February 26 of the same year. The U.M.W.A. accepted the proposed reduction, but on the condition of the "Closed Shop" arrangement being put in force, that is to say on the condition that only members of the

U.M.W.A. organization be given employment in the mine. The reduction contemplated was opposed by the O.B.U. and application made for the appointment of a Board of Conciliation to deal primarily with this matter.

3. On March 16, 1927, the Company intimated its refusal to accept the condition proposed by the U.M.W.A. and posted up at the mine a notice of the new wage scale without any condition attached, that is to say, on the "Open Shop" understanding. Immediately a strike was declared by the local U.M.W.A. after a vote of its members was taken. Some U.M.W.A. men, however, who were engaged in maintenance operations continued to work, together with a larger number of non-U.M.W.A. men. Straightway, on March 21, 22 and 23 the U.M.W.A. posted pickets, thereby forcibly preventing many non-U.M.W.A. employees from reporting for work. The issue was that on March 24 the mine was put on a maintenance basis with the majority of those at work non-U.M.W.A. men.

4. On March 25 and 26 there was held in Halifax a conference between representatives of the Company, of the U.M.W.A., and of the non-U.M.W.A., together with two representatives of the Federal Department of Labour, Messrs. Quirk and O'Neill. This conference seems to have had no definite outcome.

5. On April 4 a telegram was sent by Mr. H. R. Silver, representing the Company, to Messrs. M. J. McLean and Alex. L. McIsaac of Inverness, representing the non-U.M.W.A., intimating that Mr. J. W. McLeod, District President of the U.M.W.A. had guaranteed sufficient men to work the mine efficiently. This telegram seems to have been interpreted by the non-U.M.W.A. men as a reversion to the "Closed Shop" arrangement, and representation was immediately made to this effect to the Company, which drew from them (the Company) on April 5 a telegram to non-U.M.W.A. officials promising that there would be no "Closed Shop" agreement.

6. The next development in order of events was that on April 9 the non-U.M.W.A. employees were informed by the management of the Company that they must become members of the U.M.W.A. organization or forfeit employment at the mine.

7. On April 14 a contract was signed between the Company and representatives of the U.M.W.A.—a contract drawn up in these terms, "to operate the mine with the U.M.W. employees men and boys, if they have sufficient to carry on the amount of work required"; this contract to become effective on April 15 (on which date the proposed wage reduction was apparently for the first time to come in force), and to remain in force until April 1, 1928.

8. On April 19 an application was made for the appointment of a Board of conciliation by Messrs. McLean and McIsaac, Chairman and Secretary respectively of the committee of non-U.M.W.A. employees represented to be about 270 in number. In response to this application the present Board was appointed.

In the light of these facts and after the most careful and deliberate consideration the Board agrees with the Company that, in the particular circumstances of the present situation at Inverness, it seems advisable that the employees at the mine should all belong to one organization.

The contention of the Company and of the U.M.W.A. representatives was and is that a contract had been entered into on April 14, 1927, between the Company and representatives of the U.M.W.A., and that under this contract none but U.M.W.A. men could be employed at Inverness. It does not appear to the Board that the clause of the contract dealing with this point amounts to a full or precise declaration of the "Closed Shop" policy. The clause states that the mine is to be operated "with U.M.W.A. employees, men and boys, if they have sufficient to carry on the amount of work required". Under such a clause, it seems to the Board, the Company might employ any number of non-U.M.W.A. men if it could show the necessity of employing them so as "to carry on the amount of work required". It was submitted by the Company that more skilled labourers were needed in the mine than were being supplied by the U.M.W.A., and there would seem from the mere terms of the contract to be no objection to the supplementing of such labourers from outside the U.M.W.A. ranks.

Objection has been taken by the non-U.M.W.A. men to the validity of the contract in question on the ground that it contravenes the provisions of the Industrial Disputes Act, 1907, inasmuch as the dispute between the U.M.W.A. men and the company arose as far back as February of this year, and that this

42386—2½

dispute had not been settled when the contract was made. The Board is of opinion that the objection of the non-U.M.W.A. men is well founded and that a contract entered into before the dispute was finally dealt with by a Board contravenes the terms of section 57 of the Act.

It should be noted at this point that the company's representatives raised a question as to the validity of the Industrial Disputes Investigation Act, 1907, and of the Industrial Disputes Investigation Act (Nova Scotia), 1926. The Board cannot undertake to pass judgment on this contention. It is a contention the validity of which can be settled only by our courts. The Board feels, however, that it is entitled to assume that the provisions of the Industrial Disputes Investigation Act, 1907, apply to the dispute in question until our courts have otherwise decided. Even assuming that the contract referred to is valid and that it does call for a "Closed Shop" arrangement, the Board feels that, having regard especially to the evident circumstances of stress under which it was entered into by the company and to the serious situation which has developed in the community of Inverness as a result of it, both the U.M.W.A. and the company might reasonably consider the desirability of waiving the provisions of the contract in respect of the employment only of U.M.W.A. men while allowing the other provisions of the contract relating to wages, hours of employment, etc., to remain in force.

Accordingly the Board recommends as follows:—

1. That the non-U.M.W.A. men at Inverness presently out of employment be allowed to return to work immediately under the wage agreement of April 14 without any condition of affiliation attached, on the understanding that, on the expiration of three months from the date of the communicating of this recommendation to the parties involved, a plebiscite or referendum of all employees be taken to determine which organization shall be recognized at the mine,—it being definitely and distinctly understood that the minority shall fall in with the decision of the majority, and that the organization receiving the majority of votes shall continue the agreement of April 14 with respect to wages, hours of employment and working conditions.

2. That no discrimination be made against any employee as regards either his return to work or his continuing at work on the ground of his affiliation with any particular organization.

3. That those entitled to vote in the referendum shall consist of those who, on the tenth day before the date of the referendum, are *bona fide* employees of the company as shown by the company's employment roll.

4. That the voting shall be by secret ballot, and as nearly as possible after the manner followed in the election of members to the House of Assembly of Nova Scotia—the election to be conducted by a committee of five composed of the Resident Mine Manager and two representatives from either side.

5. That no organization shall be allowed to bring into the town for election propaganda purposes any person not ordinarily employed at the mine, but that the entire decision in this matter be left to the free judgment of the employees themselves.

Mr. R. S. McLellan, representing the Employer, finds himself unable to agree with the Board's recommendations, and is forwarding a minority report.

All of which is respectfullly submitted.

(Sgd.) JOHN MACKINTOSH SHAW,
Chairman.

(Sgd.) ANGUS L. MACDONALD,
Representing certain employees.

Minority Report

To the Honourable The Minister of Labour,
Ottawa, Canada.

SIR,—The undersigned having, on the recommendation of the employer, been appointed a member of the Board of Conciliation in this matter by formal instrument under your hand and seal dated the 3rd day of May, A.D. 1927, begs to report as follows:

The Reverend Chairman furnished the members of the Board with copies of the statements and complaints alleged herein by the applicants, from which it appears that the matters complained of are an alleged lockout of employees and a reduction in wages.

The Board was convened at Inverness, Nova Scotia, on Wednesday, May 18, at 10 a.m., and it was thought advisable to ascertain by informal inquiries the facts and circumstances in connection with the dispute and try to effect an amicable settlement between the parties before proceeding with a public inquiry and taking evidence under oath. With this end in view, a series of conferences were held between the Board and representatives of the applicants, who are all

members of the organization known as the One Big Union, and between the Board and representatives of the employer, and also between the Board and representatives of the United Mine Workers of America, who are at present operating the mine at Inverness under contract with the employer. During these conferences it quickly developed that the real trouble at Inverness is a dispute between two rival labour organizations namely: the One Big Union and the United Mine Workers of America, with respect to the "closed-shop" policy adopted and put into effect by the latter.

The facts in connection with the organization and development of the rival labour unions at Inverness are fairly clear. It appears that, for some years previous to and including 1924, the great majority of the employees belonged to the U.M.W. of A., and that the mine was being operated under a "closed-shop" policy. During 1924 internal dissensions began to develop among the members of the U.M.W. local with the result that, about January 1, 1925, a number of the employees broke away from the U.M.W. and organized a branch of the One Big Union.

The company continued to employ the members of these rival organizations until the beginning of the present year, when it was found necessary to begin negotiations with its employees for a new wage schedule, including a reduction in wages.

These negotiations resulted in an agreement between the company and the U.M.W. with respect to a new wage schedule, but the U.M.W. insisted upon a "closed-shop" policy limiting employment at the mine to members of their own organization. The company, however, made an attempt to operate the mine without the "closed-shop" policy and posted the new wage schedule at the mine and offered work to all of its employees irrespective of union affiliations. The U.M.W. immediately declared a strike to oblige the company to adopt the "closed-shop" policy, and it was found impossible to carry on successful operations at the mine with the number of O.B.U. men who reported for work. The company then found itself obliged for the sake of operations and the safety of the property to enter into an arrangement with the labour organization that would undertake to furnish the largest number of men. The U.M.W. immediately undertook to supply sufficient men to carry on operations and protect the property, provided the company would employ only men who were members of their organization. At this stage of the trouble the U.M.W. furnished the company with a list of 360 mine workers at Inverness who were ready and willing to begin work, and irrespective of any difficulties that might arise between the company and the men to provide sufficient maintenance men to protect the property. The O.B.U., on the other hand, could not undertake to provide sufficient men to carry on mining operations, and would not give the company any definite assurance with respect to maintenance men in the event of future strikes.

At the present time there are only 212 members of the O.B.U. at Inverness who were former mine employees. It would, therefore, appear that the company did the only thing it could do under the circumstances, namely conclude an arrangement with the U.M.W. for the operation of the mine and the safety of its property under a "closed-shop" policy.

Under such circumstances I doubt that there was even a technical lockout within the meaning of the Act, which has as one of its great objects the safety of property and the ultimate success and prosperity of industrial communities in which disputes of this nature arise.

In view of the circumstances above noted, the Board felt that the most satisfactory settlement of the trouble at Inverness would be for all the employees to forget their past differences and alleged grievances against each other and become members of one or other of the now rival labour unions. In an earnest effort to bring about such a solution, the Board spent four days on the ground conferring with representatives of the labour unions and the company, but failed to bring about an amicable settlement. A special consideration in favour of a fusion of the two labour unions at Inverness is the prudent and practical attitude of the company. The representatives of the company told the Board that, in arranging wage schedules and adjusting day to day grievances with its employees, the best results can only be obtained when the workmen are all members of a recognized and responsible labour organization. The company further says that it is practically impossible to carry on successful operations at the mine with two rival and hostile labour unions on its hands and that the cost of producing coal under such circumstances is so great that they will not undertake to operate the mine.

It would, therefore, appear that the only practical solution of the difficulties at Inverness is for one or other of the rival labour unions to disband and all of the employees become members of the continuing organization. In arriving at a conclusion as to which of these unions should continue to function, the following considerations appear to weigh

strongly in favour of the United Mine Workers of America:

1. The majority of the mine workers at Inverness are now members of the U.M.W. in the proportion of 360 to 212.
2. The U.M.W. has already been accepted and recognized by the Company and is operating the mine under a definite written contract to furnish sufficient men for mining operations, and to supply under all circumstances the number of maintenance men required to keep the mine clear of water and otherwise protect the property.
3. The vast majority of the mine workers in Nova Scotia are members of the United Mine Workers of America and this organization is generally recognized as the miners' organization in this Province.
4. The Province of Nova Scotia constitutes a separate District with complete autonomy under the International Constitution and the District is governed by a District Executive elected by popular vote of the membership under the Presidency of Mr. J. W. MacLeod, who is generally regarded as the fairest, ablest and most reliable labour leader we have ever had in Nova Scotia.

It would therefore, appear that, if there is any force in the argument that the majority should rule, the question is already settled for the miners at Inverness. It would also appear that the U.M.W. cannot be asked to disband at Inverness and leave the District Executive and the Company in the air so far as the present contract to furnish sufficient men is concerned. And it would undoubtedly be in the best interests of the miners at Inverness to belong to an organization that commands the loyalty and respect of the vast majority of workmen in Nova Scotia engaged in the mining industry, and with complete autonomy as a District under the present able leadership to work together in peace and harmony for the greatest good for the greatest number, which is an objective beyond which no labour organization or other institution can hope to attain.

During one of our conferences with the representatives of the O.B.U. they were asked to state frankly their objections to becoming members of the United Mine Workers of America. These objections are noted below and I have not the least doubt that they are seriously regarded as quite sufficient by the local membership of the O.B.U.:

1. The alleged misapplication of funds in the U.M.W. local at Inverness in 1924, and the failure of the Local and District officers to account for same upon demand.
2. The check-off of Union dues and assessments at the colliery office and the distribution of moneys thus collected.
3. Dissatisfaction with the present local officers of the United Mine Workers.
4. The question of local autonomy, the local branch of the O.B.U. at Inverness not being subject to any District or International interference.

With respect to the first of these objections it appears that the misapplication of funds complained of was the use for the purpose of paying local obligations of moneys that should have been remitted to the International and District Executive. This matter appears to have been satisfactorily adjusted between the local union and the District and International Officers and a new system of auditing and checking funds adopted, under which a complaint of this nature is not likely to arise again. In view of the above adjustment and the precautions taken for the future I doubt that the objection as to a former misapplication of funds should be allowed to stand in the way of peace and harmony in the community.

The distribution of monthly dues, however, is more difficult of explanation. Eighty per cent of the monthly dues collected by the U.M.W. are forwarded to the District and International Executives for administrative and strike fund purposes, while the Winnipeg headquarters of the O.B.U. only exacts a monthly per capita tax of fifteen cents. If, then, the District and International Executives require a monthly per capita tax of eighty cents for administrative and strike fund purposes and the O.B.U. only requires fifteen cents per month for the same purposes, the difficulty would appear to be to explain where the O.B.U. obtains the balance of the funds which it must necessarily require.

The objection to the present local officers of the U.M.W. was settled out of hand by the offer of the membership to accept the resignation of their officers and agreeing to elect a new slate of officers fairly representative of both factions. The U.M.W. even went further as they thought in the interests of peace and harmony in the community by agreeing to waive all penalties imposed by their constitution upon workmen who desert their ranks for the purposes of joining a dual organization and definitely assuring the mem-

bers of the O.B.U. fair and generous treatment if they would consent to break the deadlock by becoming members of their organization.

With respect to local autonomy and the interference of District and International officials, it would appear that a provincial organization as large as the U.M.W. and which includes probably 12,000 miners should have the guidance and assistance and be subject to the control of some provincial executive authority. It cannot be disputed, however, that the International Executive of the United Mine Workers has to some extent interfered in the internal affairs of the District and particularly on one memorable occasion. In 1922 a District convention in defiance of the International constitution undertook to pass a resolution linking up this District with the Red International of Moscow and again in 1923 in defiance of their constitution undertook to break a solemn contract with the British Empire Steel Corporation by coming out on strike in sympathy with the steel workers of Sydney. Mr. J. L. Lewis, the International President of the United Mine Workers of America, then promptly and in no uncertain manner interfered in the internal affairs of District 26 by revoking the District Charter, dismissing the District Executive and all subordinate officers and setting up a provisional District whose officers he ordered to assume the equity and obligations of the agreement entered into in good faith with Besco. I do not think the people of Nova Scotia or the great majority of the coal miners in this Province resent international interference of this sort in the internal affairs of District No. 26, and on the other hand I have much doubt that the organization in Canada known as the One Big Union is entirely free from outside or international interference.

In recommending the immediate fusion of the rival labour unions at Inverness and the continuance of the organization that is now recognized by and has a definite written agreement with the Company, I am not unmindful of the fact that there are many good and fine men among the membership of the O.B.U. there. This is particularly true of the gentleman who acted as chief spokesman for their representatives before the Board. He is indeed the type of man that any labour union or other organization might well be proud to have in its ranks. Neither am I unmindful of the fact that I am suggesting that these men sacrifice everything that they fought and stood for during the last two and a half years. But in the best interests of peace and harmony in the community and the future success and prosperity of the town and county of Inverness, this, in my judgment, is the only practical and satisfactory solution of the present difficult and unfortunate state of affairs.

The Board is unanimous on the major point involved, namely, that under the circumstances all the employees at Inverness should belong to one labour union. I deeply regret, however, that I am unable to agree with my colleagues as to the manner in which this should be brought about.

I am firmly convinced that the situation requires immediate and definite action along the line suggested above, and that any solution of the difficulty which does not contemplate the immediate bringing together of the men in one labour organization will probably make matters very much worse than they are and will be detrimental to the best interests of the industry and the town of Inverness.

The matter of the reduction in wages was not seriously stressed by the representatives of the applicants before the Board, and, in view of the fact that the schedule of rates for the different classifications at the mine appear to be fairly satisfactory and compare favourably with the wages paid by other coal operators in the Province, a recommendation on this point is hardly necessary.

I have, therefore, the honour to report to the Honourable, the Minister of Labour, that there has been no lockout of employees at Inverness within the meaning of the Act, and that the action of the Company as above detailed appears to be amply justified under the circumstances. I have the honour also to recommend that the best and most practical solution of the difficulty before us is the immediate and voluntary disbanding of the organization known as the One Big Union and the return to work of as many of the men as the Company can at present employ as members of the local union of the United Mine Workers of America.

Appended hereto and for the information of the Honourable, the Minister, are copies of statements filed by the parties interested in this matter and which the Board felt fully disclosed the facts and circumstances without taking evidence in the usual manner at public hearing and under oath.

All of which is respectfully submitted.

Dated at Halifax, N.S., May 25, 1927.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) ROBT. S. MCLELLAN,

Member of the Board of Conciliation, Re: Dispute between Inverness Railway and Coal Company and certain of its Mine Employees.

Report of Board in Dispute Between the British Columbia Telephone Company and Its Electrical Workers

The findings of the Board of Conciliation and Investigation established to deal with differences between the British Columbia Telephone Company and certain of its employees being members of Locals 230 (Victoria, B.C.) and 310 (Vancouver, B.C.) of the International Brotherhood of Electrical Workers, were received by the Minister of Labour on May 28. The dispute related to the employees' request for recognition of the union by the company and the question of wages, hours and other matters. Two hundred and sixty employees were said to be directly affected. The report was signed by Mr. F. J. Gillespie, chairman, and Mr. James A. Campbell, employer member of the Board. A minority report was received from Mr. Robert H. Neelands, the workmen member of the Board.

Report of Board

VANCOUVER, B.C., May 21, 1927.

To the Hon. PETER HEENAN,
Minister of Labour,
Ottawa, Ontario,
Canada.

Re "Industrial Disputes Investigation Act," 1907, and re Differences between the British Columbia Telephone Company and certain of its employees being members of Locals 230 and 310, International Brotherhood of Electrical Workers.

HONOURABLE SIR,—Pursuant to the appointment of Mr. J. A. Campbell on the Board of Conciliation and Investigation made on the 21st day of April, A.D. 1927, and your Chairman on the 29th day of April, A.D. 1927, we sat at all sittings of the Board and beg to submit the following report:—

An agreement, dated 31st December, 1921, made between the British Columbia Telephone Company and Local Unions 230 and 310, International Brotherhood of Electrical Workers (Exhibit 6), was in existence until on or about the 21st day of June, 1926,—a thirty days' notice of termination of the agreement having been given by the Union on the 21st day of May, 1926 (Exhibit 8). This agreement provided, *inter alia,* for a closed shop. According to the evidence of Mr. LaBelle, General Superintendent of the plant of the British Columbia Telephones, the same would be in existence to the present day if it had not been terminated by the Union. Nothing was said at the hearing as to why the Union terminated the 1921 agreement other than to meet changing conditions. In terminating the said agreement, the Union fully expected to be able to negotiate a further agreement with the Company; but on or about the 21st day of June, 1926, the Company decided on a new policy, namely, dealing direct with its employees, a policy followed by Telephone Companies in the Western States and the Pacific North West. The Company accordingly, on or about June 21st, 1926, posted in the plant a synopsis of working conditions (Exhibit 2) and addressed a personal letter to each one of its employees setting out the rate of wage that would be paid each employee. This letter showed the base rate of pay and included from four to five merit rates. It was clear the Company intended to pay extra money to any employee showing efficiency and faithfulness to duty from then on. After the above working conditions were posted, the Company's new policy was discussed in the Union and a committee to negotiate the intended agreement appointed. A strike vote was taken in the Union, but later in July a motion was passed to the effect that no strike be considered and the negotiating committee be discharged; and the men to all intents and purposes accepted the new rate and the working conditions. Later, however, a committee of five representing the maintenance men, and headed by an employee, Mr. F. R. Hurst, was appointed to discuss with the Company the question of shift and holidays. At the end of December progress was reported by this committee, and in January the committee stated that they could get no further. In February the Union decided to send for an International officer. Mr. Noble arrived from Toronto representing the International Electrical Workers. When here, the resolutions dated March 15th and 16th, 1927, referred to in the Application, were passed, and the application for a Board was sent forward to Ottawa.

The Application sets out six different claims and demands on behalf of the Union, these being as follows:—

(1) Recognition of Union as representing employees of Plant, Construction and Maintenance Departments;
(2) Refusal of employer to negotiate an agreement with the applicants covering conditions and wages;
(3) Wage schedule;
(4) Hours of work and working conditions, generally;
(5) Proportion of numbers of journeymen and apprentices to be employed;
(6) Acceptance of agreement, copy of which is enclosed herewith and marked "A".

The representatives of the Union were asked by the Board if they had any complaint regarding the working conditions set out in

Exhibit 2. They replied that the matter of shift should be settled; that men put to work on Saturday afternoons and Sundays should be paid extra time and not straight time as paid shift men. The Company replied that they had always been and are prepared to discuss this with a committee of the men, but not with the Union. The Company contended no serious complaint exists in respect of shift; that the clause in the working conditions dealing with shift was copied verbatim from the Agreement of 31st December, 1921, that had been in existence for approximately five and a half years and no objection or complaint had been advanced during that time by the men regarding shift.

It was further pointed out by the men that under Section 2 (b) the men are to be paid double time for working on Saturday afternoons, Sundays and holidays, and that by Section 3, subsection (b), they should receive an extra hour's pay for time worked on a holiday. The Company pays double wages for overtime on Saturdays, Sundays and holidays, and we do not think triple pay was intended by the condition, and, if so, would not be fair.

Employees called by the Board, namely, Mr. Hurst referred to, Mr. Hillier and Mr. Williams, stated that there is no major dispute between the men and the Company. Mr. Williams, a member of the Union, who resigned from the Union within the last two or three weeks, stated that no action was taken by the Union from July, 1926, until February or March on account of the Union not being able to find a grievance against the Company that would justify the Union in applying for a Board.

The wages paid to the men appear to be higher than paid to similar employees elsewhere. Mr. Hillier referred to, a former employee of the Alberta Telephone Company, came here on account of the larger wages paid here. Mr. Halse, President of the Company, stated in evidence that wages and working conditions are better between the employees and the British Columbia Telephone Company than elsewhere in America. This was not challenged by the representatives of the Union. Mr. Halse frankly stated to the Board and to the representatives of the Union that if they would show him anything unfair the Company is doing, he was prepared to discuss it; and outside of the minor matters referred to, nothing was advanced by the representatives of the Union for consideration. The representatives of the Union did not know what the employees of the British Columbia Telephone Company are being paid at the present time. We thought at the time and still think this admission is most singular and that the Union does not seriously raise the question of wages.

Mr. Halse further stated that he was at all times, and still is, prepared to recognize a committee of the employees.

At this time, Mr. Shannon, financial secretary of the Union, stated that the men were prepared to negotiate an open shop agreement, notwithstanding that the agreement terminated by the Union in June, 1926, provided for a closed shop.

In addition to the wages paid by the Company, they give the men the following useful benefits, which Mr. James Hamilton, Comptroller of the Company, said costs the Company approximately nine cents per day per man to carry out. These benefits are:

(1) Employees' Benefits for disability and death (Exhibit 12).
(2) Employees' Savings Plan (Exhibit 13).
(3) Payment of medical aid.

Mr. Noble, in his summary, said that the Union stands for an ever-increasing standard of living as Canadian citizens, but failed to show that the wages they were receiving at the present time did not give them this privilege.

No coercion of employees by the Company was shown. Mr. Halse emphatically stated that, if the representatives of the Union would show him that any coercion exists on behalf of the Company directing any men to work on Sundays or otherwise, the person responsible for such would be immediately discharged. He further stated that no employee was ever let out for refusing to work on Sunday. This was not replied to by the Union representatives.

We find that no grievance of real merit exists between the Company and the employees, and that the object of having the Board appointed was to have the Union recognized. The representatives of the Union stated that they wanted the Union recognized because working conditions would not eventually be as satisfactory for the men working under the present system as it would be under the Union. Their contention in this regard might be sound, but there is no evidence of it as far as the present application is concerned.

It was further pointed out that men belonging to the Union obtain death and sick benefits which are of great use to them. This is correct, but there is no reason, as far as we can see, why the Union should not be sustained by the employees and all benefits kept up, even although no agreement is signed by the Company. The men should keep the Union intact, build up its morale, which at the present is sadly lacking, as evidenced in part by (Exhibit 13) the resignation of approximately eighteen active members from the Union. Internal differences exist in the Union, and evidence was given that a new

organization called the "British Columbia Telephone Electrical Employees" is being formed by the men. The organization is said to contain sixty per cent of the maintenance men, who, representatives of the Union state, were the cause of the Application for the present Board.

We accordingly find:—

(*a*) That the Company should be given a chance to work out is present policy of dealing with the men, particularly since they did not adopt it until the Union itself terminated the old agreement.

(*b*) That no grievance or complaint has been shown to exist that would warrant the making of an Order directing the Company to depart from its present policy of dealing with the employees and which appears to be working fairly satisfactorily.

All of which is respectfully submitted.

(Sgd.) F. J. GILLESPIE,
Chairman.

(Sgd.) J. A. CAMPBELL,
Commissioner.

Minority Report

On April 14, 1927, I was appointed by the Hon. Minister of Labour to serve as a member of Conciliation Board to inquire into the above matter. Having fulfilled that duty, and not being in agreement with my colleagues on the Board, the following is respectfully submitted as my minority report

By evidence submitted to the Board it was shown that on December 31, 1921, a working agreement (Exhibit 6) was entered into between the British Columbia Telephone Company and Local Unions No. 230 and 310 of the International Brotherhood of Electrical Workers, said agreement to remain in effect until January 31, 1923, and continue unless terminated by thirty days' notice by either of the parties to the agreement to the other.

The agreement was continued until May, 1926, when a committee of the Union met officials of the company with a view to negotiating a new contract. Following that interview a letter (Exhibit 9) was sent by the company to the Union stating that no negotiations could be carried on until the contract was cancelled. The Union replied giving formal notice (Exhibit 8) of its desire to terminate the existing agreement and to enter into a new one.

No consideration was given the Union in its request for a new agreement, and in June 1926, the company issued to its employees individually a "Synopsis of Working Conditions and Wages" (Exhibit 2).

During February of this year the Union renewed its efforts to open up negotiations with the Company with a view to reaching a working agreement, but its request was refused. (Exhibits 3 and 4.)

This all goes to show that the Union acted in good faith throughout, and it is difficult to understand why the Company should assume such an attitude, particularly in view of the fact that there appears to be very little difference between the men and the Company regarding wages and working conditions—none but what could be amicably settled at one or two interviews; also the chief witnesses for the Company stated before the Board that there had been absolutely nothing to complain of in their dealings with the Union. No reason for their change of policy was advanced by the Company further than that it was "thought not in the best interest to have a contract," and that "there is no organization of telephone workers in the Pacific States."

While it may be true there are no working agreements between the Pacific States Telephones and their employees, representatives of the Union in the present case gave evidence to the effect that working agreements exist between some ten locals of the Electrical Workers Union and Mountain States Telephone and Telegraph Company; also between companies and unions in the Provinces of Manitoba, Saskatchewan and Alberta.

Taking into account all the circumstances as brought out in evidence my conclusion is that the men should not have been denied the right of recognition and collective bargaining, and I do not agree with my colleagues on the Board on that point. For years the Telephone Company had recognized that principle—a principle which is conceded by fair-minded people—and no evidence was produced in this case which would show cause for a change of such policy.

On the question of wages, Exhibit 19, being an agreement recently entered into between the British Columbia Electric Railway Company and the International Brotherhood of Electrical Workers covering employees doing a very similar class of work to that of telephone employees covered in the present instance, is a very fair basis, and my conclusion in that matter is that Locals 230 and 310 are entitled to an increase of fifty cents per day over the rates set forth in the 1921 contract (Exhibit 6) for foremen, headgangmen and journeymen; working conditions to remain as set out in said 1921 contract.

(Sgd.) R. H. NEELANDS.

Vancouver, B.C., May 23, 1927.

ALBERTA LABOUR DISPUTES ACT

Report on Proceedings During the First Year.

THE first annual report of the minister in charge of the administration of the Alberta Labour Disputes Act (Statutes of 1926, chapter 53) is contained in the annual report of the Commissioner of Labour of the Province for the year 1926. The provisions of the Act were outlined in the LABOUR GAZETTE, May, 1926, page 447. Its enactment followed the judgment of the Judicial Committee of the Privy Council declaring invalid those sections of the federal Industrial Disputes Investigation Act, 1907, which deal with matters properly coming under provincial jurisdiction (LABOUR GAZETTE, February, 1925, page 241).

Four applications for the appointment of a Board of Conciliation and Investigation were received during the year, and a board was granted in one case only. These applications were as follows:—

1. From the employees of the Greenhill Mines, Blairmore. The dispute arose out of the discharge of an employee in connection with which discrimination was charged. Following negotiations carried on by representatives of the government, the employee was reinstated in his former employment, and the application was withdrawn.

2. From the employees of the Hillcrest Collieries, who charged discrimination in connection with the discharge of four employees. No board was granted, as the persons involved were not employees within the meaning of the Act, and the alleged discrimination was prior to its enactment.

3. From members of the Edmonton and District Miners' Federation, employed by four companies in this field. The organization had made three requests of the employers:—

(1) Recognition of the Mine Workers' Union of Canada;

(2) 13 per cent increase in wages of all men employed in and around mines, who are members of the said Miners' Federation;

(3) Reconsideration of dead work, and payment thereof.

It was found that there were four separate agreements by the parties concerned in this case, and therefore four disputes instead of one, and while efforts were being made to have one board established, to which all matters could be referred, most of the men returned to work under the terms of the existing agreements, and the application was allowed to lapse.

4. From the employees of the Greenhill Mines, Blairmore, members of Canadian Mine Workers' Union, Local No. 1.

Prior to the application the employees, relying on an agreement dated April 7, 1925, had requested an increase in the minimum daily rate in respect of machine pick mine workers, and a readjustment in respect of rates paid for laying of sheet iron in places other than chutes. A board was granted, composed of H. M. E. Evans, Edmonton, Chairman, named by representatives of employer and employees; L. P. Roberts, Bellevue, named by the employer as his representative, and F. Wheatley, Blairmore, named by the employees as their representative.

Report of Board

The majority report of the Board was as follows:—

(a) *Re claim of miners in respect of machine pick mining*—

(1) The earnings of the men on contract, under the new system of mining by machine picks, without the use of explosives, are not in dispute, whether these be in excess of the earnings by the old method or whether in a normal working place they fall even below the minimum rate fixed in the minimum rate clause—that clause applies only to earnings in abnormal places.

(2) We find from the agreement, dated April 7, 1925, and effective to April 7, 1926, that it was the intention of the parties to that agreement to fix $5.40 a day for a fair day's work in an abnormal place.

(3) From the above we find that the company has no right to expect anything more than a fair day's work. If the use of the new machines involved unavoidable injury to the workmen, it would be a matter to be dealt with by regulations under the powers given to the respective bodies by The Mines Act and the Workmen's Compensation (Accident Fund) Act of the Province of Alberta. An increase in the minimum rate for working abnormal places would not be a proper way or adequate way of meeting any condition of work which involved unavoidable injury to the workmen.

(4) We find on the evidence submitted to us that the disabilities which have so far occurred might have been avoided by proper precautions in the way of protection against exposure to chill, and in taking steps to have the men become more gradually accustomed to the work.

(5) We dismiss the argument that the added productivity should be reflected in a higher minimum wage, because the latter only applies in an abnormal place and in the very nature of the case just when there is no added productivity. As stated above by the agreement, the company has no right in an abnormal place to demand more than a fair day's work, which the men undertook to furnish throughout the life of the agreement on condition that they would be made up to the minimum of $5.40 per day.

(6) We also dismiss the argument that, since the contract man in a normal place earns more than before, he has the right to expect a higher minimum in an abnormal place. Having regard to its greater expense in the new method, the company claimed in its reply that the higher earnings of the contract men were a proof that the contract rates were too high. As stated, the matter of contract rates is not in dispute before this Board. At the same time, it would not be fair in view of the company's side of the case, to use the higher earnings as an argument for a higher minimum. In any case, we do not think that this would touch the general principal of the agreement, that a fair day's work was to be given for the minimum stated.

(7) We therefore find against the claim of the employees under the first heading, namely: for the payment of a minimum rate of $6.50 per day for the new work of machine pick mining.

(Sgd.) H. M. E. EVANS, *Chairman.*
(Sgd.) L. P. ROBERTS.

MINORITY REPORT

Mr. Frank Wheatley presented a minority report in which he commented on the findings contained in section (3) of claim (a) of the above report, which in his opinion contained the kernel of the dispute. Dealing with this section he said:—

In the first place, I contend, and am supported by good mining practice, that when any contract working place becomes abnormal, such place requires a maximum of skill and hard work to overcome the abnormality, and in consequence warrants a higher rate of pay, and instead of the minimum wage, such person undertaking the work should at least be paid the average wage earned in a normal working place.

Secondly, it is the custom to pay higher wage rates where machines are used, a reason itself which would justify the increase asked. As to the argument of the Majority Report—that if the use of the new machines involved unavoidable injury to the workmen it would be dealt with by the Workmen's Compensation Act, I wish to say: Sworn evidence of the medical doctor called to testify before the board, showed that the use of these machines did involve injury to the workmen, and for which injury the doctor prescribed rest as a cure. While the rest cure is usually obtained in the course of a few days, I must point out that the waiting period specified when making claim under the Compensation Act is "for and from the fourth day of the accident," with the result that few claims for compensation could be sustained. Owing to this waiting period, the workmen are, therefore, compelled to seek relief in the higher rate of pay.

Nor can I agree that The Mines Act would deal with the matter by regulation. The Mines Department advised the necessity for this new system of work in the interests of safety, and endorsed by the workmen, with the company sharing equally in the results, as the small added costs referred to elsewhere in the report is taken up as insurance in greater protection to its property as well as to the lives of its workmen.

I therefore submit the foregoing as sufficient grounds to warrant the increase asked in the minimum wage rate to men working in an abnormal place under the new system of machine pick mining and to justify non-concurrence in that part of the Majority Report marked (a).

(Sgd.) FRANK WHEATLEY.

UNANIMOUS FINDING

(b) *Re Claim by miners in respect of payment for paying sheet iron—*

(1) We find that neither the wording of the clauses in the agreement nor the established practice at the mine are sufficient to constitute a definite agreement in this point between the employer and the employees. In any case, a system of payment by lineal measurement does not appear to be satisfactory, because the sheet iron is often laid and relaid within the day period, or may be covered up with coal and inaccessible for measurement.

(2) We therefore recommend that the present basis of compensation for this work be abandoned, and that the following be inserted in the agreement under the heading "Greenhill both Seams," and immediately following the clause on "Chute Buildings," Chute in pillars: laying sheet iron in pillars, one and one half per cubic yard, the company to lay the sheet iron to the pillar.

(Sgd.) H. M. E. EVANS, *Chairman.*
(Sgd.) L. P. ROBERTS.
(Sgd.) FRANK WHEATLEY.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1927

THE number of strikes and lockouts in existence during May was seventeen, as compared with twelve the preceding month. The time loss for the month was less than during May, 1926, being 20,766 working days as compared with 59,591 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
May, 1927	17	4,772	20,766
April, 1927	12	853	10 082
May, 1926	15	4,018	59,591

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving 130 workpeople, were carried over from April and twelve disputes commenced during May. One of the strikes and lockouts commencing prior to May terminated during the month and eight of the strikes and lockouts commencing during May also terminated during the month. At the end of May, therefore, there were on record eight strikes and lockouts, as follows: Ladies' clothing factory workers, Toronto, Ont.; cap makers, Toronto, Ont.; men's clothing factory workers, St. Hyacinthe, P.Q.; electrotypers, Toronto, Ont.; bakers, Montreal, P.Q.; blacksmiths, etc., Saskatoon, Sask.; tile layers and terrazzo workers, Montreal, P.Q.; and plumbers, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected although the unions or organizations concerned have not yet declared them terminated. Information is available as to six such disputes, namely: metal polishers at Sackville, N.B., March 15, 1921; moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, March 24, 1925; men's clothing factory workers at Montreal, P.Q., July 28, 1926, fur workers at Winnipeg, Man., September 25, 1926, and plumbers at Windsor, Ont., April 5, 1927.

Of the disputes which commenced during May one was against an alleged violation of agreement, one for contract rates of pay instead of day rates, one for increase in wages and recognition of union, three for increases in wages and shorter hours, one was sympathetic and six were for increases in wages. Of the nine strikes which terminated during the month four were in favour of the employers, one in favour of the employees, three were indefinite and one resulted in a compromise.

A dispute involving 850 coal miners at Sydney Mines, N.S., in a cessation of work from April 29 to May 2 was reported to the Department too late for publication in the May issue of the LABOUR GAZETTE. The cause of the dispute was an alleged violation of the terms of the working conditions on the part of the employer, namely charging the workmen for tools. The men returned to work when it had been arranged that the dispute would be dealt with by the union officials and the employer.

A report has been received as to a strike of coal miners at New Waterford, N.S., about May 24, but no particulars have yet been received.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, ST. HYACINTHE, P.Q.—In this dispute, which began on February 7, 1927, a great many of the employees involved had by the end of the month secured work with another factory opening up in this locality.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—In this dispute which commenced April 13, 1927, caused by a proposed reduction in wages, a settlement was reached at the end of May, the employer agreeing to union wages and working conditions.

COAL MINERS (LANDING TENDERS), GLACE BAY, N.S.—A number of landing tenders ceased work on May 9, alleging a violation of their local contract because additional men had

been employed on the work, who should, they claimed, be paid by the company instead of being given their share of the earnings. On the second day the company posted a notice terminating the contract in thirty days, and the employees returned to work.

COAL MINERS, ROADMAKERS AND OTHERS, GLACE BAY, N.S.—The employees ceased work when their representations that they should be given contract rates instead of day rates of pay in accordance with the recommendations of the Nova Scotia Coal Commission

STRIKES AND LOCKOUTS DURING MAY, 1927

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts occurring prior to May, 1927.			
MANUFACTURING—			
Clothing (including knitted goods)—			
*Ladies' clothing factory workers, Toronto, Ont.	4	100	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Cap makers, Toronto, Ont....	5	125	Commenced Aug. 27, 1926, for employment of union members only. Unterminated.
Men's clothing factory workers, St. Hyacinthe, P.Q.	10	240	Work ceased Feb. 7, 1927, for higher wages, shorter hours and recognition of union. Unterminated.
Men's clothing factory workers, Montreal, P.Q.	109	2,398	Commenced April 13, 1927, against reduction in wages. Terminated May 30, 1927, in favour of employers.
Printing and Publishing—			
Electrotypers, Toronto, Ont...	2	50	Commenced Dec. 20, 1926, against discharge of employees for union activity. Unterminated.
(b) Strikes and lockouts commencing during May, 1927.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners (landing tenders), Glace Bay, N.S.	26	39	Commenced May 9, 1927, against alledged violation of agreement. Terminated May 11, 1927, in favour of employers.
Coal miners (roadmakers), Glace Bay, N.S.	68	340	Commenced May 13, 1927, for contract rates instead of day rates. Terminated May 19, 1927.
Coal miners, Glace Bay N.S....	3,992	7,508	Commenced May 14, 1927, in sympathy with roadmakers. Terminated May 19, 1927.
MANUFACTURING—			
Vegetable Foods—			
Bakers, Montreal, P.Q.....	73	1,500	Commenced May 1, 1927, for increase in wages Unterminated.
Iron, Steel and Products—			
Sheet metal workers, Edmonton, Alberta.	25	475	Commenced May 2, 1927, for increase in wages. Terminated May 25, 1927. Employees substantially successful.
Blacksmiths, Saskatoon, Sask.	37	444	Commenced May 17, 1927, for increase in wages and recognition of union. Unterminated.
Non-Metallic Mineral Products—			
Stonecutters, Winnipeg, Man...	40	640	Commenced May 12, 1927, for increase in wages. Work resumed May 25, 1927.
CONSTRUCTION—			
Buildings and Structures—			
Tile layers and terrazzo workers, Montreal, P.Q.	70	1,476	Commenced May 2, 1927, for increased wages and shorter hours. Unterminated.
Plasterers, London, Ont.....	52	52	Commenced May 2, 1927, for increase in wages. Terminated May 3, 1927, in a compromise.
Structural iron workers, Vancouver, B.C.	80	960	Commenced May 2, 1927, for increase in wages and 5-day week. Terminated May 16, 1927, in favour of employers.
Plumbers, Vancouver, B.C....	175	4,375	Commenced May 2, 1927, for increase in wages. Unterminated.
Steel workers, (reinforced concrete), Vancouver, B.C.	4	44	Commenced May 2, 1927, for increase in wages and 5-day week. Terminated May 16, 1927, in favour of employer.

*Reports indicate that the strikers have been replaced, but there are still a number of employees out and on the strike benefit list of the union

(of which Sir Andrew Rae Duncan was Chairman), were refused. Miners in the same collieries and miners in other collieries ceased work in sympathy with these, but all returned to work on May 19, the District Executive of the union to take the matter up with the employer as both parties had previously agreed to accept the recommendations of the Commission.

BAKERS, MONTREAL, P.Q.—Bakers employed in six establishments in Montreal ceased work on May 2 because an increase in wages was not granted. At the end of May thirteen of these men had secured work with other employers and the remainder were still on strike.

SHEET METAL WORKERS, EDMONTON, ALTA.—Employees in a number of establishments ceased work on May 2 because a demand for an increase in wages from 70-90c. per hour to 80c.-$1 was refused. The employees requested the Minister of Labour to bring about a settlement and the Fair Wages Officer of the Department proceeded to Edmonton and secured a settlement at a wage rate of 75c.-$1 an hour, with a signed agreement for a year. (This appears among the "Recent Industrial Agreements" on another page).

BLACKSMITHS, ETC., SASKATOON, SASK.—A dispute caused by a change in wages and working conditions involving payment of piece rates to certain classes of employees resulted in a cessation of work on May 17, 1927, involving chiefly blacksmiths, blacksmiths' helpers, etc., who demanded increases in wages from 50c.-60c. per hour for some classes and 50c.-55c. for others and from 40c. to 45c. or 50c. for still others, presenting a draft agreement embodying their proposals. The Trades and Labour Council of Saskatoon applied to the Minister of Labour, who dispatched the Fair Wages Officer, through whom negotiations between the employer and the blacksmiths' union were conducted until May 28, when the employer refused to continue the negotiations, a joint conference being held on May 24. The member of the Federal Parliament for Saskatoon, Dr. A. M. Young, also mediated. At the end of the month the dispute was still unterminated.

STONECUTTERS, WINNIPEG, MAN.—Stonecutters employed in four stone yards in Winnipeg ceased work on May 12, 1927, for an increase in wages from $1.10 per hour to $1.25. After some negotiations the employers had proposed a signed agreement continuing the existing wages for two years at the rate of $1.10 per hour, and stated that any men who worked from May 12 would be agreeing to these conditions. After a conference on May 24 it was agreed that work should be resumed, the subject of the dispute to be again taken up with a view to arbitration if not otherwise settled.

TILE LAYERS AND TERRAZZO WORKERS, MONTREAL, P.Q.—Tile layers and terrazzo workers employed in 15 establishments in Montreal ceased work on May 2, when a demand for an increase in wages from a range of 60c.-90c. per hour to $1 per hour, with the 44-hour week instead of a week of from 49½ hours to 54 hours, was refused. At the end of the month the dispute remained unterminated, but some of the strikers were reported to have secured work with other employers at the higher wages demanded.

PLASTERERS, LONDON, ONT.—A cessation of work occurred on May 2, when a demand for an increase in wages by plasterers from $1.10 per hour to $1.40 was refused. The next day work was resumed, the employer of most of the men having agreed to pay $1.15 per hour and in 1928 to increase the rate to $1.20.

STRUCTURAL IRON WORKERS, VANCOUVER, B.C.—A cessation of work occurred on May 2 when a demand for an increase in wages from $9 per day to $10 for erectors, and from $6.50 per day to $7.50 for fabricators, and the 5-day week instead of the 44-hour week, was refused. On May 12 negotiations were resumed, the employer refusing to make any concessions on the ground that the cost of building was already so high that it was difficult to get money invested in building. The men returned to work at the same wages and hours previously in force.

PLUMBERS, VANCOUVER, B.C.—Plumbers employed by the various firms in Vancouver ceased work on May 2, when a demand for an increase in wages from $8.50 per day to $10 was refused, the agreement which provided for a closed shop and the 5-day week having expired. On May 17 the employers announced that, the union having refused to accept their proposals, they would in future work on an open shop basis at the wages in force during the previous year, namely $8.50 per day. At the end of the month the dispute was still unterminated.

STEEL WORKERS (REINFORCED CONCRETE), VANCOUVER, B.C.—When a demand for an increase in wages from $6.50 per day to $7.50 was refused, the steel workers on reinforced concrete, members of the Vancouver local of the Bridge and Structural Iron Workers' union, ceased work on May 2 on one building and on May 16 they returned to work at the wages and hours previously in force.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1927, as an addendum to the review of strikes and lockouts in Canada during 1926. The latter included a table summarizing principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

During April, 16 new disputes were reported as beginning in the month and 20 were still in progress from the previous month, making a total of 36 disputes in progress in the month. The number of workpeople involved directly and indirectly was 10,200, and the time loss 79,000 working days. Of the 16 disputes beginning in the month, 11 arose on questions of wages and 5 on other questions. Settlements were made in 20 disputes, 3 in favour of workpeople, 6 in favour of employers and 11 were compromised.

Two important coal mining disputes were settled during April. At Sunderland, a dispute involving 1,705 workpeople which began on December 1, 1926, "against local reductions in piece-work rates of wages offered on termination of the national stoppage" was settled on April 25, when the men accepted the employers' offer to postpone the reduction for six weeks. At Newport, Monmouthshire, 3,000 workpeople were involved in a dispute in two collieries which began on December 8, 1926, "against local concessions as to wages, etc., demanded on termination of the national stoppage." In the case of one colliery, work was resumed in January and an amicable settlement was reached at the other on April 14.

United States

Preliminary figures for March show the number of disputes beginning in the month to be 75, of which 53 involved 10,604 employees, making the average number of employees per dispute 200, while revised figures for February give the number of disputes as 66, of which 51 involved 10,217 employees. Of the 75 disputes in March, 23 were in the clothing industry and 15 in building trades.

Clothing workers in Baltimore, Maryland, to the number of 1,800 went on strike on March 23. The union demanded that the employers post bonds with the union guaranteeing the terms of the contract. The strike was terminated successfully on March 28.

Bituminous Coal Miners' Dispute.—There was little change in the general situation regarding this dispute during May. The president of the miners' organization stated that while those union mines which were working under tentative agreements were producing about 8,000,000 tons per week, the consumption was about 11,000,000 tons, thus using up the reserve stocks. On the other hand, the market for coal was quiet and the demand light. In the Southwest a conference at Kansas City, Missouri, was reported to have reached a tentative agreement as to working conditions and was later to discuss wages.

In the Central Pennsylvania field, union mines continued to be operated under an interim agreement by which the old scale of wages is maintained pending a settlement of the dispute or further negotiations. A joint conference of operators and miners in this district was held in Philadelphia from May 23-27, but no basis of settlement was reached. Further negotiations were postponed until June 15.

In some localities affected by the dispute, operators were reported to be taking steps to evict miners from houses belonging to the operators with a view to employing non-union miners and operating open shop. This resulted in court proceedings which in some instances prevented evictions for the time. There were also reports of picketing and of some minor disturbances where operators were attempting to, or were reported to be about to operate mines on a non-union basis.

Plumbers' Dispute, New York.—No settlement was reached in May of the plumbers' strike in Brooklyn which began on April 1, and involved 3,000 plumbers and helpers, its purpose being to secure an increase in wages from $12 to $14 per day. An injunction, however, was obtained by the union forbidding the master plumbers in Manhattan and the Bronx from continuing the lockout which they had declared on April 27 as a protest against the strike in Brooklyn. As a result of this injunction, 5,000 plumbers in these two boroughs returned to work on May 20. The 2,000 plumbers and helpers also locked out in Queens and Richmond boroughs failed to secure a similar injunction, so that 5,000 were

still involved in this dispute. The master plumbers in Brooklyn advertised for plumbers to replace the strikers at the same wage rate as in force before the strike.

Belgium

In February, 1927, 10 strikes and one lockout began while 12 strikes were still in progress from the previous month, so that the total number of disputes in progress during the month was 23, involving 4,344 workpeople and resulting in a time loss of 57,647 working days. Of the disputes beginning in the month, 6 were over wages questions and 2 against the discharge of workmen. Settlements were reached in 13 disputes, 2 in favour of workpeople, 3 by compromise and 8 in favour of employers.

In March, 1927, there were 16 new disputes while eleven were carried over from February. The total number of disputes in progress was 27, involving 6,252 workpeople and resulting in a time loss of 93,140 working days. Of the 16 disputes beginning in the month 15 were disputes as to wages. Thirteen strikes and one lockout were settled during the month, 8 in favour of workpeople, 3 by compromise and 3 in favour of employers.

Finland

Figures for the year 1926 have recently been published. The total number of disputes was 72, involving 310 establishments and 10,230 workpeople, and resulting in a time loss of 374,474 working days. Of the 72 disputes, 36 were over wages questions, 26 over agreements, 4 concerning holidays of workmen or foremen, one a sympathetic dispute and 5 over various other causes. The results of the disputes were as follows: 39, involving 6,569 workpeople, were settled by compromise; 13, involving 2,430 workpeople, were in favour of employers; 14, involving 904 workpeople, were in favour of workpeople; and 6, involving 327 workpeople, were unterminated or the result was unknown.

In March, 1927, 12 disputes were in progress, involving 27 establishments and 1,327 workpeople. In April, 1927, 10 disputes were in progress, involving 18 establishments and 865 workpeople.

Netherlands

During March, 1927, 16 strikes began, 12 of which involved 650 workpeople. There were no lockouts during the month.

New Zealand

During the first three months of 1927, there were 14 industrial disturbances, involving 15 firms and 993 workers. The total duration was 40 days, the average duration 2.86 days, and the approximate loss in wages £2,212.

Industrial Disputes in the Irish Free State From 1923 to 1926

A statistical survey of industrial disputes for the four years 1923 to 1926 was published in the *Irish Trade Journal* for May, 1927. In the following tables, disputes are classified by industries, by causes and by results. The number of disputes is the number which began in the year, while the number of workpeople involved and working days lost refer to all disputes in progress during the year. The table showing results of disputes is based on the number of disputes which terminated in each year and the number of workpeople involved therein.

DISPUTES ACCORDING TO INDUSTRIES

Industry Group	Number of Disputes				Number of Workpeople Involved				Number of Working Days Lost			
	1923	1924	1925	1926	1923	1924	1925	1926	1923	1924	1925	1926

Protection of Young Persons in Turkey

It is reported from Angora that the Turkish Cabinet has concluded the consideration of a Bill which, among other provisions, prohibits the employment of children under the age of twelve years.

Special instructions will be issued to define the establishments in which boys and girls under eighteen may be employed.

Hours of work are limited to ten a day, with an interval of one hour, which is, however, not obligatory in the case of work lasting less than six hours.

Further instructions will be issued to determine the conditions of intermittent employment in transportation industries by a system of rotation.

The dismissal of a worker is not permitted except on a fortnight's notice and on payment of a fortnight's wages.

A Labour Directorate is to be created under the Ministry of Commerce to supervise the enforcement of the Act.

Pupils in Canadian schools now have $907,862 on deposit in the Penny Bank, as compared with $795,154 a year ago. Cornwall (Ont.) children head the list with 87 per cent of the pupils having bank accounts. This compares with 30 per cent in Toronto and 21 per cent in Montreal.

British anthracite shipments to the Port of Montreal this season to the end of May totalled 128,661 tons, or an increase of 22,646 tons over the corresponding period of last year. At the present rate of progress those in the business predict that 800,000 tons will be handled in Montreal during the season, ending next December, though some authorities say a million would be nearer the mark. British steam coal and other bituminous material has also been coming to Montreal in goodly quantities, this season's receipts to date being 19,587 tons, as compared with nil last year, 1,894 tons in 1925 and 165 in 1924.

OLD AGE PENSIONS IN CANADA

Address delivered by the Hon. Peter Heenan, Minister of Labour, before the Union of Canadian Municipalities, Ottawa, June, 1927

IT is now twenty years since the subject of improving the condition of aged deserving poor persons in Canada was first brought to the attention of the Dominion Parliament. It was successively under consideration in 1907, 1908, 1912, 1914, 1922, 1924, 1925 and 1926. On two different occasions, in 1912 and 1924, special committees were appointed by the House of Commons to enquire into an old age pension system for Canada, witnesses were examined, and the proceedings continued on both occasions into the ensuing session.

In 1908 an Act of Parliament was passed authorizing the sale of what are known as Canadian Government Annuities, a perfectly safe form of investment through which individuals may make financial provision for their old age. This Act is administered by the Department of Labour and efforts are being made at present to bring its advantages more generally before the public.

But notwithstanding that economic conditions and opportunities in Canada are vastly better than in most other countries; notwithstanding the fact that there is a very general disposition among our people towards thrift, as is shown by the large amount of life insurance, etc., per head of the population; notwithstanding the passage of generous workmen's compensation laws for the care of those who have suffered through disabling accidents and industrial diseases; and notwithstanding the existence of voluntary pension schemes in many industrial and commercial undertakings for the benefit of old workers, investigation has shown conclusively that many people reach old age without adequate financial means to provide for themselves during the period of life which may remain to them after their earning powers have ceased.

Moreover, it is becoming increasingly harder for workmen who have passed their prime to keep up with the rapid pace of present day industry, and unemployment, due to this cause, is on the increase, with consequent difficulty to the older workers in making the provision which all of us would like to do for our own declining years.

Under the British North America Act the responsibilities arising out of social problems of this nature devolve upon the respective provinces and circumstances have already compelled the adoption in all the provinces of measures for the relief of old persons who are without financial means. Large sums of money are indeed disbursed in the older provinces on relief work of this nature. The methods in force vary, however, in different parts of the country, on account of the population moving freely from one province to another, it is consequently difficult, if not impossible, for any province acting alone to meet the situation as fully as is desirable.

The Dominion Government was convinced through the representations made to it from various quarters, and through the investigation of Parliamentary committees, that the time had come when we should institute a country-wide system of old age pensions for the protection of persons of seventy years and upwards who were without the necessary means of support. An Old Age Pensions Bill was accordingly introduced by the Government in Parliament last year based on the recommendations that had been made by a special committee of the House of Commons in the preceding session. This measure passed the House of Commons but failed of adoption in the Senate.

The old age pensions policy of the Government was widely discussed during the last election campaign. One could hardly read a newspaper, indeed, during the campaign without noticing some reference to the desirability of establishing a system of old age pensions in this country, and if we are to interpret the will of the electorate in the way that electoral decisions are generally interpreted, there can be no question that the principle of old age pensions was endorsed by the people of Canada at the polls. The Government Bill was accordingly re-introduced during the past session and, after passing the House of Commons by general consent, was also adopted in the Senate on division by 61 votes to 14—a notable victory for public opinion.

The Parliamentary Committee of Enquiry disclosed the fact that most of the important industrial countries of the world have already made provision by law for the protection of their aged workers. Among the countries which have already taken such action are: Great Britain, France, Germany, Belgium, Italy, Austria, Czecho-Slovakia, Norway, Sweden, Denmark, Spain, Portugal, Switzerland, Greece, Bulgaria, Roumania, Argentina, Chili, Uruguay, Australia, New Zealand, and certain States of the United States of America.

Insurance against incapacity to work, due to old age, has been provided in these countries by a number of different methods.

42386—3½

Probably the earliest systems were those established by fraternal and benefit societies and trade unions for their members. Schemes for voluntary insurance were introduced later, subsidized in some cases by the state. The failure of the voluntary system, even when assisted by public funds, to attract general support, led in many countries to the adoption of compulsory insurance laws or laws which are general in their application. The latter laws fall into two classes: those under which the beneficiary makes a contribution to the pensions fund, and those under which pensions are paid from the public treasury. The former type is found in Argentina, Belgium, France, Czecho-Slovakia, Bulgaria, Jugo-Slavia, Rumania, Germany, Sweden, Italy, Portugal, Luxembourg, Greece, the Swiss Canton of Glarus, and Austria. Non-contributory systems are in force in Australia, New Zealand, Uruguay, Spain, Denmark, Norway, and some States of the United States of America. In Great Britain a non-contributory system of pensions was introduced by legislation in 1908, applicable to persons of seventy years of age and upwards, which was followed in 1925 by the establishment of a contributory system applicable to persons between the ages of sixty-five and seventy. But let it be noted that in Great Britain the non-contributory pension for the protection of persons of seventy years and over was the first step taken.

The Committee which was appointed by the House of Commons of Canada in 1924 to make an enquiry into an old age pension system for Canada, reported that it has enquired into the systems which are in operation in England, Australia, New Zealand and certain other countries; that it had examined witnesses, carefully considered their suggestions and compared the information obtained from municipalities throughout Canada in reply to a questionnaire which had been sent to the mayors of cities and towns in every province. The Committee recommended the establishment of an old age pension system at the earliest possible date for deserving indigent persons of 70 years of age and upwards; further, that the maximum rate of pension should be $20 per month, which would be lessened by private income or partial ability to earn, and that one-half of the amount of pension payable should be borne by the Federal Government and the other half by the Provincial Government of such provinces as expressed by legislation their desire to adopt the system. The Committee estimated that there would be approximately 98,841 eligible pensioners under the proposed system. If the maximum rate of pension of $20 per month were paid in all cases, the total annual expenditure would be approximately $23,000,000. This amount, however, would be reduced by any private income or partial earnings.

The Committee was reappointed in the following session (1925) in order that it might give consideration to correspondence which had been exchanged during the interval between the Federal Government and the Provincial Governments. The Committee gave careful consideration to the views expressed by the different provinces and obtained also an authoritative legal opinion from the Deputy Minister of Justice as to the authority of Parliament to legislate on the subject of old age pensions.

In view of existing financial conditions and the heavy taxation of Canada, the Committee did not feel warranted in recommending that the Dominion Government should bear the entire cost of old age pensions; on the other hand, it regarded this measure of social reform as being very important and favoured co-operative action with the several provinces. The legal opinion of the Deputy Minister of Justice quoted in the Committee report was to the effect that the payment of old age pensions was within the jurisdiction of the provinces, although open to assistance from the Federal treasury.

The report of the Old Age Pensions Committee was adopted at the close of the session of 1925 after a debate in which an amendment was moved in favour of a purely Federal scheme. This amendment was rejected by 139 votes to 17. The feeling of the House of Commons, however, was against a purely Federal system at that time, and although the question of a purely Federal system was raised again during the recent session of Parliament, no amendment was moved on the point and, as I have already intimated, the Government Bill, which was identical with one that had been presented to Parliament in 1926, was adopted during the past session in both Houses of Parliament, and became law on March 31.

In the course of the Parliamentary debate last year and again last session, some members advocated the desirability of a contributory system. The Prime Minister, Mr. Mackenzie King, dealt with this subject in the session of 1926 and pointed out that practically every scheme of contributory old age pensions in existence to-day began upon a non-contributory basis. Like the Prime Minister, I feel that if we were establishing an old age pension scheme with the younger people in view, I should myself be inclined to the contributory system, but having in mind the

fact that we are facing a practical problem and that we are dealing at present with the case of those who have already reached old age, and who through lack of opportunity or by reason of misfortune are without means to provide for themselves, I think you will agree with me that the non-contributory plan of pension is the best one, in fact the only one to meet the case. At the same time, as I stated in Parliament, I hope to see our present system of Canadian Government Annuities developed later into a broad scheme of social insurance on a contributory basis. From the financial point of view these annuities are at present a remunerative form of investment, but my hope is that in the not distant future they may be still further popularized and that arrangements may be made whereby annuities will be obtainable at the age of sixty-five through the payment of weekly contributions from workers and employers jointly, assisted, as in England, by small contributions weekly from the State.

With regard to the Old Age Pensions Act which passed the Dominion Parliament at its recent session, I would point out that it authorizes the Dominion Government to make agreement with the provinces for the payment of old age pensions by the latter, and sanctions the payment from the Dominion treasury to the provinces quarterly of half of the net sum which may have been paid out by the provinces for pensions. Pensions, therefore, will not be payable in any province until that province has passed legislation authorizing their payment and agreeing to bear one-half of the cost. Already one province, namely, British Columbia, has passed the necessary legislation approving of the scheme and giving authority for the Provincial Government to enter into an arrangement with the Dominion for the establishment of a system of old age pensions in the Pacific Coast province. A resolution approving of the principle of old age pensions was also adopted at the recent session of the Manitoba Legislature. With respect to the other provinces, it is expected that the subject will be discussed at a conference which is to be held between the Dominion and Provincial authorities later in the present year.

The administration of old age pensions is to be entrusted to authorities appointed by the respective provincial governments. The cost of administration will have to be borne by the province, but it is not expected that the same will be excessive in view of the fact that boards and commissions already exist in most of the provinces which are charged with the administration of workmen's compensation, mothers' allowances, etc., through which the application for old age pensions can probably be handled at a minimum of expense.

The old age pension will be payable to every person who (a) is a British subject, or in the case of a widow who is not a British subject, was such before her marriage; (b) has attained the age of 70 years; (c) has resided in Canada for the 20 years immediately preceding and (d) in the province in which the application for pension is made for the 5 years immediately preceding the granting of the pension; (e) is not an Indian (Indians being otherwise provided for); (f) is not in receipt of an income of as much as $365 a year, and (g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income, the amount of their old age pension would be subject to reduction by the amount, if any, that their private income exceeds $125 a year. In some quarters it may be felt that this legislation strikes at self-reliance, thrift and industry, and that it may make for waste and extravagance. I cannot, however, feel that these fears are grounded in fact. The truth is rather that in spite of all our natural resources and accumulated wealth, we have not far to look anywhere for evidence of the necessity for an old age pensions scheme to take care of indigents. Right here in Ottawa, the municipality is at present contributing to the care of 641 old persons, many of whom do not belong here but who have come in from the surrounding country. This is one of the difficulties all through the country in relief work. Persons become indigent and come into the towns and cities for relief. The municipalities often feel that they are overburdened with their own indigents and try to evade the responsibility of taking care of the outsiders. In that way the burden is not shared equally nor are the people treated as they should be. Old age and poverty combined plead their own case. There is no necessity, I am sure, for anyone to advocate their cause. I am, however, pleased to have this opportunity of explaining our recent legislation and of bespeaking for it the cordial support of the public in order that the provinces may be enable to enter into co-operative arrangements with the Dominion Government looking to the adoption of a country-wide system of old age pensions from coast to coast.

LABOUR LEGISLATION IN NOVA SCOTIA AND ONTARIO

Nova Scotia

THE Nova Scotia Legislature was in session from February 2 until March 11, 1927, and enacted a number of measures affecting labour, including an act providing for a two-platoon system in fire departments, a revision and amendment of the laws governing coal and metalliferous mines and quarries, and amendments to the Workmen's Compensation Act, the Motor Vehicle Act and The Woodmen's Lien Act.

Hours of Fire Departments

The Fire Departments Two-Platoon Act applies to cities having a population of at least thirty thousand, on condition that a resolution approving of the Act has been passed by a majority in the city council. Where the system is adopted, one of two plans may be followed. Under the first plan, a platoon may be kept on duty for twenty-four consecutive hours, after which it is allowed twenty-four consecutive hours off duty. Under the second plan, one platoon would be on duty for day work for ten hours and the other platoon for fourteen hours night duty, each platoon to alternate at least once in six days from day to night duty or *vice versa*. Provision is made for the attendance of all officers and employees of a fire department in case of a conflagration. No deduction may be made from pay or holidays of employees by reason of the provisions of the Act.

Coal Mines Regulation Act

In the revision of the Coal Mines Regulation Act, many changes were made and the provisions rearranged.

Parts I and II deal with management and qualifications for employees. No person who does not possess a mine manager's certificate may have charge of, direct or control work or operations at any mine or group of mines or interfere with any manager, underground manager, overman or mine examiner in the discharge of his duties. The Board of Examiners is charged with the duty of preparing and examining all examination papers used in the conduct of examinations.

There are a number of new provisions in regard to qualifications. The holder of a first-class certificate of competency under the British Coal Mines Act, 1911, may be a candidate for manager. A candidate for overman must be holder of a certificate of competency as a mine examiner. The three years' practical experience required of candidates for mine examiner must now be gained in a mine in the Province of Nova Scotia. The Act provides for two classes of certificates of competency for coal miners. An applicant for a second class certificate must be at least eighteen years of age and have been employed underground in a coal mine in Nova Scotia for at least one year. An applicant for a first-class certificate must possess a second class certificate, and, in addition, at least one year's experience at the working face in a coal mine in Nova Scotia. The provision that the year's experience necessary must be gained within the Province of Nova Scotia, incorporates in the Act a ruling made some time ago by the Department of Public Works and Mines. This ruling, which was based on an interpretation of the old Act, was given in the LABOUR GAZETTE for February, 1927, at page 128.

Under the new Act a person employed to mine coal under authority of a second class certificate must be constantly accompanied by and under the direction and control of a holder of a first-class certificate. A steam boiler must be in charge of a person possessed of a certificate as a stationary engineer or a license as a fireman. No shots may be fired except by a mine examiner. The examiner is also entrusted with the safety of the part of the mine assigned to him and the workmen employed therein. The deputy inspector must at least once a month make careful inquiries at every mine within his jurisdiction as to the size of the section of the mine which is assigned to every mine examiner and if he considers that owing to the size of the section or any other cause, the mine examiner is unable to carry out his duties in a thorough manner or that there exists anything dangerous or defective, he shall order the owner, agent or manager to remedy the matter immediately.

Returns made by the owner, agent or manager of a mine must now show the number of persons employed underground and above ground, distinguishing the persons and different classes employed underground and above ground.

Part III of the Act deals with inspection and contains several new provisions. The inspector is authorized to close a mine or a portion of it or to stop all work if he considers such action necessary for the safety of those employed in the mine. If, owing to

any order for the remedying of defects or the closing of a mine or part of it or the stopping of work, a question arises for settlement, the order must be complied with pending the settlement, subject to an appeal to the Minister. Dangerous conditions arising from old or abandoned workings are to be reported immediately by the Deputy Inspector to the Inspector who in his turn will report to the Minister. The Inspector, under instructions from the Minister, will examine the locality and issue directions governing operations until the dangerous condition is overcome.

Part IV contains provisions as to safety including many new and stringent regulations as to ventilation; the custody and use of locked safety lamps; the firing of shots; the use of underground haulage roads and the provision of sufficient man-holes or places of refuge; and certificates of physical competency for operators of mechanical apparatus. The minimum age for employment as driver of an animal working a windlass or gin is raised from fourteen to fifteen years.

Part V, which is entirely new, is devoted to mine rescue work and provides that the owner, agent or manager of a mine shall provide and keep on hand at every colliery properly constructed ambulances, stretchers and other medical supplies and appliances deemed necessary for giving first-aid. Oxygen helmets and other mine-rescue apparatus required by the Minister must be kept on hand and constantly maintained in workable condition. Provision is made for the organization of trained mine-rescue corps and the establishment of mine-rescue stations. These provisions as to rescue work do not apply to mines ordinarily employing fewer than thirty persons underground, or to mines exempted by order of the Minister, but two or more mines may be grouped by the Minister for the purpose of mine-rescue work, and when so grouped will be deemed to be one mine.

Parts VI, VII and VIII deal respectively with employment and wages, investigations, and submarine areas and contain little new matter.

Part IX contains a number of new general rules to be observed as far as reasonably practicable at every mine. These rules set forth the duties of the manager, underground manager, overman, mine examiners, mine examiners who are shot-firers, stablemen and drivers, and stationary engineers. Rules 21-26 deal with precautions against coal dust which will come into force on January 1, 1928, unless the time is further extended by the inspector.

Part X contains the same provisions with regard to special rules as the old Act.

Part XI is entirely new and directs the provision and maintenance of suitable washhouses at mines where more than twelve persons are ordinarily employed.

Part XII deals with notices and is practically all old legislation.

Metalliferous Mines and Quarries Regulation Act

The law relating to metalliferous mines and quarries was also revised and consolidated under the new title "The Metalliferous Mines and Quarries Regulation Act," and contains a number of new provisions. The minimum age for the employment of boys is raised from twelve to sixteen years. Wages may be paid only at the mine or at the general office of the company, and no deductions of any kind may be made without the written consent of the employee. Provision is made for the conduct of inquests in cases of fatal accidents by the coroner nearest the mine, unless he is interested in the operation or management of the mine, in which case he is ineligible to act and must be replaced by another coroner or justice of the peace not so interested. The inspector, and any person authorized to act on his behalf, is entitled to be present at any inquest and to examine or cross-examine any witness. If the inspector or his representative is not present, the coroner may adjourn the inquest and give the Minister not less than four days' notice of the time and place at which the evidence is to be taken. A certified copy of the evidence, together with the verdict and any recommendations as to the prevention of future accidents must be forwarded to the Minister. Additional safety measures to be taken at abandoned mines are also included in the Act. The inspector is authorized to give written notice to the owner, agent or manager of any mine of anything dangerous or defective, and require it to be remedied within the time named in the notice. He is also given power to order a cessation of work or take any measures necessary for the health and safety of employees. The general rules include a number of new provisions relating to the care and use of explosives, signalling, fencing of shafts, scaling, escapement shafts, hoisting, ladderways, protection of machinery, and operation of steam boilers. Dressing rooms must have supplies of clean cold and warm water. A properly constructed stretcher and adequate first-aid service must be kept at every mine and if poisonous gases are used or produced, satisfactory antidotes and washes must be kept in a conspicuous place, properly labelled and with explicit directions for use.

Workmen's Compensation

The Workmen's Compensation Act was amended to provide that payments to a widow who has become entitled to compensation while a resident of Nova Scotia shall not be forfeited or reduced merely by reason of her absence from the province. A further amendment authorizes the Board to expend a sum not exceeding $20,000 per annum for the purpose of rehabilitating injured workmen, and also, where necessary to supply an artificial member or members or other apparatus and keep it in repair for one year.

An Act relating to the Workmen's Compensation Board Rates in Certain Industries provides that the rates of assessment for the year 1927 upon owners of vessels engaged in the fishing industry or upon employers engaged in lumbering operations shall not be greater than the rates in force during the year 1926. The preamble to the Act states that the Workmen's Compensation Board allege that the increased rates in the fishing industry were made necessary by unprecedented disasters to the Lunenburg fishing fleet in 1926, and that the masters and owners allege that the higher rate would be so burdensome to the industry that many would be obliged to discontinue fishing. The preamble further states that the rate levied upon the lumbering industry has been found burdensome especially during the present depression and that as lumbering and fishing are two important basic industries it is desirable that no increase be made in the rates until such time as the revaluation of the reserves being conducted by the Government is completed, and pending a thorough inquiry by competent investigators into the effect of compensation rates in these industries.

Other Legislation

The Woodmen's Lien Act was amended to include laths and pit-props in the definition of "logs and timber" against which lien may be claimed.

An amendment to the Motor Vehicle Act reduces from $25 to $10 the minimum fine to be imposed upon a chauffeur who drives without a license, badge or button, or fails to produce them when required by a peace officer.

Ontario

During the session of the Ontario Legislature which opened on February 2 and closed on April 5, 1927, an Act was passed providing for pensions to employees of Hydro-Electric Systems and several laws affecting labour were amended, including the Wages Act and the Public Service Superannuation Act. In addition a number of Acts were passed consolidating and clarifying existing legislation, among these being the Mining Act, the Labour Department Act, the Stationary and Hoisting Engineers Act, the Employment Agencies Act, the Fire Department Act, the Public Health Act and the Children's Protection Act.

The Wages Act was amended to provide that a portion of the debtor's wages not exceeding $15 shall be exempt from seizure or attachment unless the debtor is an unmarried man without dependents, or the debt has been contracted for board or lodging in which cases no exemption is allowed.

The Power Commission Insurance Act enables the Hydro-Electric Power Commission to make an agreement with municipal authorities authorizing the Commission to contract with an insurance corporation for insurance of employees of such municipal authority by way of service annuities, income annuities, death or disability benefits or such other benefits as the Commission may deem expedient. The cost of insurance and of the administration and operation of the contract is to be borne by the municipal authority or authorities. The amount of contributions by employees and other matters will be dealt with in regulations made by the Commissioner with the approval of the Lieutenant-Governor in Council.

Sections were added to the Public Service Superannuation Act providing that an allowance payable to an employee incapable of managing his affairs shall be paid to his committee or to a member of his family, and also providing that an employee who is a contributor to the Teachers' and Inspectors' Superannuation Fund shall make a written election as to whether he will remain a contributor to that fund or come under the Public Service Superannuation Act. Those who take the latter course will not forfeit their title to the return of contributions made to the Teachers' and Inspectors' Superannuation Fund, and will contribute to the Public Service Superannuation Fund as from the date of appointment or from November 1, 1920, whichever date is later.

In the consolidation of the Teachers' and Inspectors' Superannuation Act a new section was added providing that where a teacher or inspector dies after becoming entitled to a superannuation allowance his personal representatives shall be entitled to receive from the Fund a sum sufficient to make the total amount received by him or his representatives equal to the total amount of his contributions to the Fund.

"CANADIAN LABOUR LAWS AND THE TREATY"

A STRONG impetus was given to labour legislation in all countries in 1919 by the Labour Section of the Treaty of Versailles, which set forth nine fundamental principles that ought to govern labour relations. The effect of the movement in Canada is described in a new book "Canadian Labour Laws and the Peace Treaty," by Dr. Bryce M. Stewart, formerly Director of the Employment Service of Canada (New York: Columbia University Press, 502 pages). "When Canada became a member of the International Labour Organization," Dr. Stewart states, "Canadian labour legislation entered upon a new phase. The promotion of laws for the protection of the workers against the evils of industrialism, which before had been mainly the concern of the trade unions, became a matter of international obligation. This function at once assumed new dignity and importance. Labour legislation is now receiving attention in Canada as never before, and fortunately so, for it rests with Canadians at large whether their country will rank among the nations as a leader or a laggard in this field."

Dr. Stewart traces to the end of 1925 the development of Dominion and provincial legislation in Canada which has any bearing on the nine principles laid down in the Labour Section of the Treaty. Each of these principles forms the subject of a separate chapter, a statement of the principle being followed, first, by a summary of the corresponding Draft Conventions, or Recommendations subsequently adopted by the International Labour Conference; second, by an outline of Dominion or provincial laws on the subject of each principle, and finally by a summarized statement of the development of the legislation.

The nine fundamental principles which should govern industrial relations, as agreed upon by the "High Contracting Parties" to the Treaty of Peace, may be restated as follows:—

1. That labour should not be regarded merely as a commodity or article of commerce.

2. The right of association for all lawful purposes by the employed as well as by the employers.

3. The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

4. The adoption of an eight-hour day or a forty-eight hour week as the standard to be aimed at where it has not already been attained.

5. The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

6. The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuance of their education and assure their proper physical development.

7. The principle that men and women should receive equal remuneration for work of equal value.

8. The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

9. Each State should make provision for a system of inspection in which women should take part, in order to ensure the enforcement of the laws and regulations for the protection of the employed.

The parties to the Treaty declared their belief that the adoption and observance of these nine principles by the industrial communities who were members of the League would confer lasting benefits upon the wage earners of the world.

After a detailed study of Canada's position on the nine labour principles of the Treaty, Dr. Stewart reaches the following conclusions:

On the first principle, the exclusion of trade unions from the operation of the "combine" laws of Canada is based, he thinks, on recognition of the doctrine that labour should not be regarded as a commodity.

In regard to the rights of association Dr. Stewart finds that as compared with British standards the rights of Canadian workers are very restricted. Trade Unions, he points out, are open to charges of criminal and civil conspiracy, and their funds are liable to seizure to satisfy damage action. While the law grants the right to strike for certain stated objects, sympathetic strikes have been held illegal. Canadian unions do not enjoy the protection with regard to picketing and injunctions granted under the law of Great Britain but are more nearly in the precarious position of the unions of the United States.

On the third principle, namely that wages should be sufficient to meet the requirements of an adequate standard of living, the writer mentions the Male Minimum Wage Act of British Columbia, the minimum wage legislation for women and children in various provinces, and the provision made by the Domin-

ion and various provinces for the payment of fair wages on government contracts.

Canada has enacted but little legislation on the eight-hour day principle. British Columbia has a law of general application, which however allows of exemptions, and the eight-hour limit is fixed for mine workers in the more important mining provinces, and for various classes of workers in certain provinces. However it is pointed out that a considerable proportion of the industrial workers have the eight-hour day by agreement with employers and the ground to be gained on this principle is not so great as appears at first.

The "weekly rest" principle is met to some extent by the Dominion Lord's Day Act, but numerous exemptions are permitted as "works of necessity and mercy." Moreover prosecution under the law may be undertaken only with the consent of the attorney general of the province concerned. Several provincial Lord's Day Acts are also in force, and the weekly rest for certain classes is provided in other provincial laws, e.g., street railwaymen, firemen, hotel employees, bakeshops, etc.

Much provincial legislation is in existence having a bearing on the "child labour" principle, there being special provincial laws to limit the age of children in mines and factories, while the Dominion Parliament in 1924 forbade employment of children under 14 years of age on vessels, or of young persons between 14 and 18 years of age as trimmers and stokers.

The seventh principle, the payment of equal wages to men and women for work of equal value, has received no legal recognition.

The principle that aliens should not be discriminated against by labour laws is violated to some extent in connection with the employment of oriental workers especially in British Columbia.

As to the establishment of a system of inspection in which women should take part, all the provinces but Manitoba, New Brunswick and Prince Edward Island have mines inspectors, and factory inspectors have been appointed in every province except Prince Edward Island. Each of the provinces with factory inspection, except New Brunswick and Nova Scotia, has at least one woman inspector. Inspection of workshops is now provided for under the factory acts. Several of the provinces have regulated employment conditions in retail stores, but they have been tardy in enforcement. Alberta, British Columbit, Manitoba, New Brunswick and Ontario have inspection of bakeshops and Alberta, Manitoba, Ontario, Quebec and Saskatchewan have legal provision for the enforcement of laws to protect workers in building construction. Inspection in the interests of workers employed on board vessels has been established by the Dominion Government under the Canada Shipping Act. The Dominion and several of the provinces have inspection of construction works and lumber and mining camps in their jurisdictions, and Alberta, British Columbia, Ontario and Saskatchewan have legal provision for the enforcement of regulations to protect electrical workers.

Canada is pronounced by the writer to be "in the lower ranks" among the members of the League of Nations which have ratified Draft Conventions and Recommendations of the International Labour Organization. "While certain provinces have recognized some of the conventions in legislation, and indeed have surpassed them in some instances, no single province has taken action on all the proposals nor have all the provinces recognized any one. The Dominion Government has signified Canada's adherence to the conventions relating to the employment of children and young persons at sea, but this action is of no great importance for Canada is not an important maritime state. None of the other proposals have been ratified. It is quite evident that there is no considerable body of well-informed public opinion on the subject of the various conventions and recommendations."

Special difficulties have hindered the ratification of Conventions and Recommendations by Canada. The period from 1921 to 1925 was unfavourable to labour legislation as being one of industrial depression. The division of legislative powers between the Dominion and the provinces has also been an obstacle to ratification. Moreover, while most of the subjects mentioned in the Labour Section are the concern of the provinces, provincial legislatures hesitate to place their own province at a disadvantage by imposing restrictions on industry that are not accepted by sister provinces. "This difference in standards," Dr. Stewart states, "as between the provinces constitutes essentially the same problem as that between nations, which the International Labour Organization is designed to overcome. Canada's obligations under the Treaty have prompted the Dominion Government to seek to clarify the jurisdictional difficulty, to call the provinces together in conference in order to map out the field, and to promote a larger measure of uniformity. This constitutes a new phase in the history of Canadian labour law, and the policy gives promise, if continued, of sufficiently justifying the Labour Section and the International Labour Organization in so far as Canada is concerned."

Dr. Stewart pays a tribute to the Trades and Labour Congress of Canada and other labour organizations as the impelling force in recent labour legislation. "It is a story of a hope for better things, partially translated into legislation by the slow democratic process of discussion at local union meetings; presentation of resolutions at trades councils, provincial and national conventions; the work of legislative committees; lobbying of members of parliament and the legislatures; and annual delegations to the Dominion and provincial governments."

The book concludes with a sketch of trade union policy in Canada. Canadian trade unionism has shown more faith in legislation than the American movement, a difference that may, in the author's opinion, be due to the larger influence of British traditions and to the greater probability of retaining legislation in force as compared with the United States, where the courts have declared so many labour laws unconstitutional. "Canadian labour's part in the development of labour legislation must be viewed in relation to the British origin of many of the leaders. Several of these men, and a considerable proportion of the rank and file, had been members of the British labour movement before emigrating to Canada, and their desire to secure in this country on the threshold of its industrial history the laws enjoyed in the advanced industrialism of the United Kingdom has been one of the major forces in the growth of Canadian labour legislation."

The book contains summaries of practically all the recent labour legislation in Canada, and a full index adds to its usefulness as a work of reference.

MINIMUM WAGES FOR WOMEN IN ONTARIO

Order Governing Hairdressing Parlours in Cities Outside Toronto

THE Minimum Wage Board of Ontario recently issued an order, dated April 30, 1927, respecting female employees in hairdressing and manicuring establishments, beauty parlours and similar occupations in cities of more than 30,000 population, excepting Toronto. A similar order covering these establishments in the City of Toronto, took effect on August 1, 1926. The rates established for the various classes of employees under these orders are as follows:—

MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN HAIR DRESSING ESTABLISHMENTS IN THE CITIES OF ONTARIO

Classes of Employees	Toronto	Other cities of over 30,000 population
Experienced	$ 12 50	$ 12 00
Inexperienced—probationary period of 3 months	No prescribed rate	No prescribed rate
2nd three months	6 00	6 00
3rd three months	8 00	8 00
4th three months	10 00	10 00

Both orders contain the following provisions:—

An inexperienced employee who has had three months or more instruction in a school which teaches any of the occupations governed by this order shall be exempt from the probationary period.

The number of inexperienced employees in any establishment shall not exceed one-fourth of the total number of female employees. This rule shall not apply where there are less than four employees.

The Toronto order, however, in regard to the exemption mentioned in the last paragraph, states that it is allowed in shops where there are four "female" employees. The Toronto order moreover provides that "no deductions below the minimum wage line shall exceed the value of the time lost," and that "an employee required to wait on the premises shall be paid for the time so spent."

Each establishment is required to keep a copy of the order posted where it can be seen readily by the employees.

A record number of immigrants entering Canada through the port of Quebec, compared with the corresponding periods of recent years, is reported by the Harbour Commission. In the course of the first five weeks of navigation, over 30,000 immigrants disembarked. Immigration officials believe that over 200,000 will come in this year by the St. Lawrence route, as compared with 109,000 last season and 85,000 in 1925.

It is expected that by harvesting time the Alberta Wheat Pool will have 142 elevators in operation. It started into the elevator business last year with 42 interior and the Prince Rupert terminal elevator. It has bought a site for a terminal elevator at Vancouver, and will build 100 in Alberta this season to supplement the 42 elevators acquired last year.

MEETING OF GOVERNMENTAL LABOUR OFFICIALS

THE fourteenth annual convention of the Association of Governmental Labour Officials of the United States and Canada was held in Paterson, N.J., from May 31 to June 3. The convention opened with a complimentary dinner at the Alexander Hamilton Hotel, at which addresses of welcome were delivered by the Hon. A. Harry Moore, Governor of New Jersey; Mr. Colin M. McLean, mayor of Paterson, and Mr. James Wilson, president of the Chamber of Commerce. Mr. James A. Wilson, president of the Pattern Makers' League of North America and seventh vice-president of the American Federation of Labour, also delivered an address. The addresses of welcome were replied to by the president of the association, Mr. John S. B. Davie, who also appointed the committees necessary for the work of the convention.

The Federal Departments of Labour of Canada and the United States were represented, as well as the province of Ontario and the following States of the Union: Alabama, Arkansas, Delaware, Georgia, Illinois, Kansas, Kentucky, Louisiana, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, Tennessee, Virginia and Wisconsin.

At the business session on Wednesday morning, June 1, the reports of the president and secretary-treasurer were presented, the former dealing with the activities of the executive officers since the 1926 convention, and the secretary with the financial statement, which showed that after all liabilities had been met there was a surplus of $560.

The constitution of the association was amended to permit the United States Bureau of Mines to be represented at the annual conventions.

Among the reports presented on new labour legislation was one from the State of Michigan in which it was stated that the law pertaining to the public employment offices had been amended to provided for a fee of $1 for registration, this provision to be first introduced in Detroit, and if found satisfactory to be extended to all public employment offices in the State. Ethelbert Stewart, commissioner, U.S. Bureau of Labour Statistics, reported for the Committee on Legal Aid and the Committee on Statistics. The convention subsequently decided to continue the Committee on Statistics, and instructed that a further report be presented on completion of the survey now being made under the auspices of the American Engineering Standards Committee. It was also decided to continue the Committee on Legal Aid, which body was instructed to work with the National Association of Legal Aid on a general survey of this subject and to report at subsequent conventions.

The afternoon session of Wednesday was given over to the discussion of employment problems, the main feature of the meeting being an address on "Public Employment Methods" by Russell J. Eldridge, Director of Employment, Department of Labour of New Jersey. Following the discussion on this subject, an address on "Rehabilitation" was given by Joseph Spitz, Assistant Director of Rehabilitation of the State of New Jersey. At the evening session papers on the following subjects were read: "Machinery Accidents and their Prevention," by James A. Hamilton, Industrial Commissioner of New York; "Labour Laws as a Means of Preventing Diseases of Occupation," by John Roach, Deputy Commisisoner, Department of Labour of New Jersey; "Mine Safety Work," by Wm. Boncer, president of Mine Inspectors' Institute of America, Richmond, Va.

On Thursday, June 2, the delegates were taken by automobiles to Jersey City where an inspection was made of the State Labour Department building. Following an address on the activities of the department by Dr. Andrew F. McBride, the Commissioner, the delegates were driven to the Singer Sewing Machine Factory in Elizabeth, N.J. After luncheon in the company's dining room the delegates were taken on a tour of inspection of the works, after which they returned to Paterson.

The Friday morning sessions was opened with the report of the Committee on Migratory Children and Children in Commercialized Agriculture, presented by Frank E. Wood, Commissioner, Bureau of Labour of Louisiana, followed by the report of the Committee on Home Work, read by Miss E. N. Matthews, of the Children's Bureau of the United States Department of Labour. The last-named committee recommended the absolute prohibition of home work, where necessary for sanitary purposes, in regard to food and clothing. While no vote was taken on this proposal the delegates approved of a session of the next convention being given over to the subject of home work, and that all the States be asked to make reports.

Following an address on "The Work of a Bureau of Women and Children" by Miss Charlotte Carr, director, Bureau of Women and Children, Department of Labour and Industry of Pennsylvania, brief discussions

took place on the problems connected with (1) Inspection work: (*a*) What methods are most effective in connection with violations of child labour laws? (*b*) What is the best time for making inspections? (2) Certification matters: (*a*) For what ages should certificates be issued? (*b*) What about the number of forms and content of certificates? (3) Public Employment Offices: Co-operation between the public employment office and the employment certificating office; (4) Child labour: (*a*) Effect on compensation laws on accidents; (*b*) Safeguarding the health of working children.

At the closing session on Friday afternoon Mr. John Moffitt of the conciliation service of the United States Department of Labour, read a paper which had been prepared by Mr. H. L. Kerwin, director of the service, on "Conciliation in Labour Disputes."

The concluding business was the election of officers which resulted as follows:

President, H. M. Stanley, Commissioner, Department of Commerce and Labour, Atlanta, Ga.

First vice-president, Dr. Andrew F. McBride, Commissioner of Labour of New Jersey, Jersey City, N.J.

Second vice-president, Maud Swett, field director, Woman and Child Labour, Industrial Commission, Milwaukee, Wis.

Third vice-president, Jas. J. Ballantyne, Deputy Minister of Labour of Ontario, Toronto, Ont.

Fourth vice-president, W. A. Rooksbery, Commissioner of Labour, of Arkansas, Little Rock, Ark.

Fifth vice-president, Charlotte Carr, director, Bureau of Women and Children, Department of Labour and Industry of Pennsylvania, Philadelphia, Pa.

Secretary-treasurer, Louise E. Schutz, superintendent, Division of Women and Children, Industrial Commission of Minnesota, St. Paul, Min.

New Orleans, La., was chosen as the convention city for 1928.

Coal Mining in Ohio

The Department of Industrial Relations of the State of Ohio recently published statistics of mines and quarries in the years 1924-5. In this period Ohio ranked as the fifth coal mining state producing 6.2 per cent of all bituminous coal mined in the United States. The production during the calendar year 1924 amounted to 30,096,893 tons. There were 1,938 mining machines reported in use in Ohio mines in 1924. The average number of tons cut per machine for the year was 13,486 tons, and the average number of tons cut per day per machine was 94.3 tons. Eighty-two steam and electric shovels were used in producing 2,407,935 tons of coal by the stripping method.

The number of employees in and around the mines in 1924 was 44,333, of whom 5.5 per cent were employed in pick mines, and 91.1 per cent in stripping operations. The average number of days worked during the year by the pick miners averaged 162, by machine mine loaders, 156 days, and by employees in stripping mines 122 days. During 1924, the average production per pick miner in pick mines was 558 tons, while in 1923 the average per pick miner for the year was 563 tons. The average production per machine runner for 1924 was 7,990 tons, as compared with 8,935 tons for 1923, while the average annual production per loader (including drillers and shooters) was 1,044 tons as compared with 1,242 tons in 1923. The production per employee per day, however, shows very little variation from preceding years. The average number of tons mined per day per pick miner in pick mines was 3.4 tons. The average production per day for machine runners and helpers was 55.2 tons, while the daily output per loader (including drillers and shooters) was 7.3 per day for the year.

Fatalities in all coal mines in 1924 numbered 99; about 64 per cent of these being caused by fall of roof. The total 1924 coal production was 30,096,893 tons, and the number of employees, 47,425 for the week of greatest employment. The frequency of the 99 fatal accidents in coal mines was, therefore, one to every 479 men employed and to every 304,009 tons of coal mined.

The number of workpeople, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland during April, 1927, was 200, as compared with 249 in the previous month and with 188 in April, 1926. Fatal accidents to seamen numbered 43 in April, 1927, as compared with 93 in the previous month, and with 50 a year ago.

WORKMEN'S COMPENSATION IN MANITOBA AND ONTARIO IN 1926

Manitoba

A SERIOUS increase in the number of industrial accidents in Manitoba is noted in the report of the Workmen's Compensation Board of the Province for 1926. During the year the Board received reports of 10,917 accidents, as compared with 9,042 reported during 1925, an increase of 20.74 per cent. In addition to 45 fatal accidents—the largest number in any year in the history of the province—about 200 individual workmen suffered severe and permanent injuries in the course of their employment. The fatalities of the year included the loss of four city firemen during the burning of the Winnipeg Theatre. The report suggests that both the employers and the employees are in some measure to blame for the increase, giving examples to show that sometimes existing regulations are not observed by either party. Increased assessment rates are threatened if the accident record fails to show an improvement.

"Unless some form of effective and concerted action along safety lines, especially in the educating of the man on the job, is undertaken by employers generally, an increase in rates will be necessary in the near future. That such work is possible is clearly demonstrated by the experience of the Canada Cement Company, where an energetic effort is made to impress upon the minds of workmen the need for taking care. The Manitoba branch of this company, employing 150 men, has just completed 415 days of continuous operation without a single loss accident, winning the Safety Trophy of the Portland Cement Association, competed for by cement plants throughout the continent. Many manufacturing concerns in Manitoba, fully alive to the need for safety work, are grappling intelligently with the problem, but there is great need for concerted and vigorous effort along this line."

Examples are given in the report of accidents which might have been avoided by the exercise of more care. Among these are some of the accidents in the group of cases due to the collapse of scaffolding, for which the Board was called on to pay $50,000.

Injuries to Eyes.—Another such group includes accidents causing injuries to the eye, stated in the report to be "largely preventable and exceedingly expensive." For instance, during 1925 there were 981 compensable eye injuries which cost $40,367.11. In 14 of these cases workmen suffered permanent injury of varying degree. There were 9 enucleations. In 3 cases workmen suffered total loss of vision of one eye, while in two cases there was partial loss of vision in one eye. These 14 cases of permanent injury were occasioned by flying fragments whilst men were operating lathes, pneumatic tools, chipping castings, reaming and working on saws. Of the minor cases, 171, costing $1,279.51, arose from the use of emery wheels. The use of air guns and pneumatic tools was responsible for 151 cases, costing $1,180.82. From the operation of lathes and shapers arose 32 accidents costing $223.75. "And so the story goes," the report continues "hundreds of preventable accidents costing thousands of dollars and resulting in loss of eyes and partial or total loss of vision. In one case of preventable eye injury it was noted that the workman already had an artificial eye, and was foolish enough to undertake work involving danger to the eyes without the use of goggles. The fault seems to lie both with employers and employees. In some cases goggles are provided but their use not insisted upon; in others, no attempt is made to see that goggles are provided or, if provided, kept in good shape. Here is a very fruitful field for accident prevention.

On December 31, 1926, the Board had on its books 445 dependants of workmen killed in industry during period March 1, 1917, to December 31, 1926, a net addition of 46 dependants during the year. These dependants included 138 widows, 272 children, 13 fathers, 17 mothers, 3 sisters, one grandfather and one grandmother.

For the purposes of the act the industries of the province are divided into seven classes, the largest being class "G" which includes the general body of employers. It is to this class that the largest share of the increase in accidents is attributed. While the steam railways, in spite of increasing business, show an actual decrease in number of accidents, and the record of the Winnipeg Electric in this connection is really remarkable, the steady increase in the number of accidents in Class "G," representing the general body of employers, is a matter of grave concern. The increase in the number of fatal and other serious accidents in this group is stated to be particularly alarming.

The total payrolls of all classes for the year 1925 (actual) and 1926 (estimated) were as follows:—

Class	1925 (Actual)	1926 (Estimate)
"A"—(Canadian Pacific Railway Company)	$ 9,236,930 11	$10,000,000 00
"B"—(Grand Trunk Pacific Railway)	1,074,801 20	1,000,000 00
"C"—(Canadian National Railways)	11,192,973 26	11,000,000 00
"D"—(Provincial Government)	1,659,347 94	1,600,000 00
"E"—(City of Winnipeg)	2,572,225 05	2,499,645 66
"G"—(General body of employers)	30,050,630 00	34,000,000 00
"H"—(Winnipeg Electric Company)	2,227,289 30	2,342,736 16
	$58,014,196 86	$62,442,381 82

The report gives the following summary of operations under the Act during the period reviewed:—

During 1926 seventeen employers had their operations brought under Part I of the Act by application approved by the Board, as compared with 37 employers brought under on application during 1925. At December 31, 1926, there were 155 employers whose operations had been brought under the act in this manner.

Twenty-five employers made application to the Board during 1926 and were permitted self-coverage, for themselves and their dependants. This was the same number of applications as were approved by the Board during 1925.

At December 31, 1926, there were 91 employers carrying protection for themselves and their dependants.

Audit of employers' payrolls during 1926 produced additional assessment in the amount of $14,008.79, whilst new employers to the number of 147 paid assessments to the extent of $1,916.66.

Refunds amounting to $1,432.90 were made to employers as a result of audit.

During 1926, 866 cases of minor injury were treated by the Board's Chief Medical Officer, as compared with 787 during 1925. The aggregate days of disability for all cases so treated in 1926 was 2,812 or an average of 3.2 days per case.

During 1926 the actual cash disbursed by the Board amounted to $789,807.37, as compared with $752,412.59, disbursed during 1925, an increase of $37,394.78.

The number of cheques issued by the Board during the year totalled 27,862, as compared with 23,195 issued during 1925, an increase of 4,669.

The value of Board Orders during 1926 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers amounts set aside to reserve to provide for future payments in fatal and permanent disability cases, was $766,715.79, as compared with $731,773.34 during 1925, an increase of $34,942.45.

Statistical tables are included in the report analyzing the accidents compensated in 1925, including cause, nature of disability, time loss, average age, average wage, industry, etc.

Ontario

The Workmen's Compensation Board of Ontario recently published their report for 1926, the twelfth year of the operation of the Act. As in Manitoba, an increase was noted in the number of accidents reported during 1926, which was in fact the record year for accidents in Ontario. The fatal accidents reported during the year were 400, as compared with 345 for 1925, and 402 for 1924. The cases involving medical aid only in Schedule 1 industries, paid for during the year 1926, numbered 24,142, as compared with 21,986 in 1925. The temporary total disability cases were 30,019, as compared with 28,397 in 1925; permanent partial disability cases, 2,384, as compared with 2,036; permanent total disability cases 14, as compared with 18; and death cases 311, as compared with 296 during 1925. This makes the total cases in which payments were made for compensation or medical aid during 1926, 56,870, as compared with 52,733 in 1925.

The number of accidents reported in 1926 was 65,916, as compared with 60,012 in 1925, and 58,675 in 1924. The highest number of accidents in any previous year was 61,109 in 1923. The month of August, 1926, had the highest number of accidents for any month in the history of the Board, with 6,595. This increase took place notwithstanding special efforts in the direction of accident prevention. The results of the organized safety movement, however, were shown in the diminished number of accidents due to machinery, which fell from 22.73 per cent in 1923 to 19.39 per cent in 1925, showing the benefits of careful inspection and supervision of machinery and appliances.

Accident Prevention.—The report states that the Board, at the request of the different industrial accident prevention associations, continued to increase the amount of grants to such associations, this amount increasing from $79,506 in 1924 to $107,972.55 in 1926. The

largest increase for the year was in connection with the Lumbermen's Safety Association, which carried on a very much intensified accident prevention campaign. The Pulp and Paper Makers' Safety Association also emphasized safety work. The Industrial Accident Prevention Associations report a large increase in the interest and enthusiasm of their members in their work and have an expanding program for the ensuing year. These associations represent the various classes of industry coming under schedule 1, that is, the industries coming under the collective liability system. The Board advances the funds required for this work, but each association is managed by its own directors. The Board appeals to all employers to interest themselves in the election of Boards of directors for their own group.

Another suggestion made by the Board is in connection with first-aid work. "There should be more attention paid to the supplies in connection with the different first-aid kits; they should be carefully inspected by employers, supplies renewed and fresh supplies put in where these deteriorate by lapse of time; and further attention should be given to the special training of certain employees in each plant so that first aid can be effectively carried on. A very great reduction can be made in accident cost by so doing, especially in connection with infection from trivial wounds. It should be remembered that the wound which does not bleed and cleanse itself is perhaps more liable to infection than those which bleed more freely, and that the smallest cut or abrasion should be properly treated to prevent development of infections, which add so materially to accident cost. Employers should understand that first aid and the expense of first aid must be borne by the individual employers. It has become a habit in some plants to have a great many of the first aid cases made medical cases, and to have them paid for as medical aid where they should be paid for by the employers as first aid. It is the intention of the Board to see that the first aid work is done at the expense of the employers in the plant, and not at the expense of industry as a whole, as it is unfair to those who are carrying out the first aid work as provided by the Act."

Benefits.—The total amount of benefits awarded under the Act during the year 1926 was $5,821,351.90, as compared with $5,565,443.39 in 1925; $6,122,820.34 in 1924; and $6,173,861.74 in 1923. Of the total benefits so awarded in 1926, $4,652,526.64 were in schedule 1 industries, under the collective liability system, and $1,168,825.26 were in schedule 2 industries (including Crown cases), which are under the individual liability system. Of the $4,652,526.64 benefits in schedule 1, $3,664,039.94 were compensation, and $988,486.70 medical aid, the medical aid being a little over 21 per cent of the total, as compared with 19 per cent in 1925, 17 in 1924, 16 in 1923, and 16¾ per cent in 1922, showing a steady increase in the amount paid for medical aid. Medical aid in schedule 2 is paid by the employees directly and therefore does not appear in the above figures.

The total benefits awarded from the commencement of the Act to the end of 1926 amounted to $57,315,447.35, while the accidents reported during the same period numbered 567,930.

The estimated pay rolls for 1926 were $411,013,000 an increase over the $395,619,000 reported in 1925, while the number of employers decreased from 26,681 in 1925 to 24,492 in 1926.

Industrial Diseases.—Reference has been made in previous issues of the LABOUR GAZETTE to the extension of the Act so as to provide compensation for miners' silicosis, or phthisis (June, 1926, page 574, etc.); pneumoconiosis (July, 1926, page 632); and caisson disease or compressed air illness (November, 1926, page 1079). The most important of these diseases is silicosis, a disease of miners working underground or in the crushing houses. The costs of compensation in silicosis are assessed over the different mining fields according to the character of the rocks encountered and the number of working shifts in each field. From April 8, 1926, when the disease was made compensable, to the end of the year, the amount paid out by the Board for silicosis was $86,555, but in addition there were outstanding liabilities in connection with secondary cases which had not yet arrived at the stage of total disability, increasing this amount to $200,000, and accordingly $200,000 was assessed against the mine owners in Ontario in connection with the awards made for silicosis. At the beginning of 1927 a Silicosis Board was established, consisting of four doctors—three from the Department of Public Health and the reporting physician—whose decision as to whether the claimant is suffering from silicosis and as to what stage he may be in is to be unanimous and final, and this Board is now functioning. All arrangements in connection with silicosis are still of a tentative nature and subject to revision as further knowledge is obtained as to the subject. The awards made are only a beginning of the costs of dealing with this disease.

The employers engaged in caisson work, finding that employees would not enter into such employment unless they were assured that

there would be compensation for caisson disease, requested the Board to add this disease to the provisions of the Act, which was done by regulation of the Board made to take effect from the first January, 1926. There has been awarded in connection with caisson disease during the present year $11,644.65.

Cost of Administration.—The percentage of administration costs to total benefits awarded in 1926 showed a decrease from the previous year. The percentage of such costs to total benefits awarded was 4.77 per cent in 1926 as compared with 4.84 per cent in 1925, while in schedule 2 there was a decrease from 4.14 per cent in 1925 to 3.44 per cent in 1926.

Merit Rating.—Merit rating, a system whereby individual distinction between employers even in the same line of industry is made according to their accident experience, is applied by the Board every three years. In cases where the accident cost exceeds, or falls short of the amount of assessment by a stated percentage, a merit-rating charge, or a merit-rating refund, is made within specified limits. The last application of merit rating was for the three-year period 1921-1923 inclusive, and the Board expects that merit rating will be considered again during 1927.

Employment for Maimed Men.—The Board urges employers to see that their partially disabled employees are taken back to work in some capacity. Reference is made to an experiment made during the year for limiting the special risks connected with the employment of such men. Employers naturally fear that if they take such a man into employment and he should happen to suffer the loss of the other eye, or arm, or leg, he would become a total disability, and instead of their firm being charged with the cost of one arm, or eye, or leg, they would be charged with total disability. The Board considered that such men should not be discriminated against in the labour market and therefore they tried out during the year the policy of charging against the class and the individual employer in such case only the percentage of disability which would be awarded for the injury actually done in such employment to an unmaimed man, and charging against the Disaster Fund the remaining cost of such total disability case. This procedure resulted in the expenditure out of the Disaster Emergency Fund during the year of the sum of $16,919.25, which is only $2,946.95 more than the interest earned on the Disaster Fund during the year, so that this fund has decreased only this amount during the year by reason of bearing this extra cost in connection with maimed men who have become total disabilities by reason of further injuries received.

The report contains full particulars regarding compensation and assessments in the various industries and explanations of the different funds of the Board; also an analysis and tabulation of the causes of accidents, the nature of the injuries and other information concerning accidents and workmen, based on the final figures of operations during 1925. The following paragraphs are taken from this part of the report:—

Comparison of accident frequencies can be made by correlating the number of accidents with the total number of full-year workers, data for this being available, however, only in Schedule 1. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are as follows:—

Year	Temporary Disability	Permanent Disability	Death	Totals
1915	3·63	·58	·12	4·32
1916	4·99	·79	·10	5·88
1917	5·78	·72	·07	6·57
1918	5·81	·66	·07	6·54
1919	5·81	·68	·07	6·56
1920	6·23	·67	·07	6·97
1921	6·25	·60	·05	6·90
1922	5·82	·52	·06	6·40
1923	6·02	·51	·05	6·58
1924	6·08	·54	·06	6·68
1925	5·94	·51	·05	6·50

On the same basis of calculation the frequency of medical aid only cases has been: 1918, 3.66; 1919, 3.70; 1920, 4.26; 1921, 4.24; 1922, 4.67; 1923, 4.96; 1924, 5.84, and 1925, 6.09.

For the year 1925 the average cost of temporary disability cases was $75.47, of which $51.10 was for compensation and $24.37 was for medical aid, the average in 1924 being $79.69, and in 1923, $70.34.

The average cost of permanent disability cases was $1,039.07, of which $223.09 was for temporary disability, $671.71 for permanent disability, and $144.27 for medical aid.

The average cost of death cases where there were dependents was $4,796.67, and the average cost of all death cases was $3,671.02, of which $22.70 was for temporary disability, $119.56 for burial expenses, $64.64 for medical aid, and $3,464.12 for death benefits.

The average cost of all cases in which compensation was paid was $180.60, of which $146.44 was for compensation and $34.16 for medical aid, as compared with $195.55 for 1924 and $184.11 for 1923.

The average cost of medical aid in medical aid only cases was $5.21, as compared with $5.16 in 1924, and $5.01 in 1923.

As to the causes of injuries in 1925, machinery was responsible for 9,868 cases of accident out of a total of 50,905, or 19.39 per cent of all cases as compared with 20.95 per cent in 1924 and 22.73 per cent in 1923.

The number of compensation cases in which the seriousness of the results was due to infection was 2,228, or 7.83 per cent of all cases compensated, including 33 cases of permanent disability and eleven deaths.

Compensation Awards in New York State

The Department of Labour of the State of New York recently published Bulletin No. 149, analyzing and summarizing court decisions in 1926 under the Workmen's Compensation law of the State. This is the twelfth annual bulletin on this subject prepared by the Bureau of Statistics and Information, the series containing digests of all decisions rendered under the law to the end of 1926.

Among the important decisions of the year are those to the following effect:

Excitement, fright and exertion may be regarded as accidents. A general contractor is liable for injury to his uninsured sub-contractor's employee, while his carrier is not;

A labourer coming to his employer's plant for his wages is there as a creditor, not as an employee;

Repair work upon a railroad watchman's shanty is not in interstate commerce;

Dock building from a raft is not in admiralty; nor is diving to saw off timbers projecting from a river bank;

A foreman's action in engaging treatment for an injured subordinate obligates the employer;

Fright is not a reasonable ground for refusing an operation;

Use of the Snellen symbols as common fractions to express vision remaining is not improper;

The Department of Labour may apportion compensation liability between carriers;

An employee's disability record may be made part of his death record, but it is not *res adjudicata*;

An employer has knowledge of an accident if he has merely heard about it;

A referee should not question an employer relative to prejudice;

Date of death, not date of accident, governs awards from the special funds established under the compensation law, while date of accident, not date of death, governs awards for disability made after death;

"Dependants" include persons over eighteen years of age, except possibly children over eighteen.

Miners' Welfare Fund of Great Britain

The fifth annual report of the Miners' Welfare Committee, established in Great Britain under the Mining Industry Act was published recently. It includes a general review of the first five years of the fund's operation. The year 1926 completed the original period of the levy prescribed by the Mining Industry Act, 1920, and the committee describe how the administrative machinery has developed, and indicate in general terms the results of the experience which has been gained, particularly in connection with the establishment of local schemes, such as recreation and sports grounds of all kinds, institutes and halls, swimming baths, libraries, colliery bands, pithead baths, hospitals, convalescent homes, nursing and ambulance services, and various educational projects for the less advanced grades.

The committee state how they have applied the £500,000 which they set aside for research on problems affecting the health and safety of mineworkers, and describe the progress which has been made in assigning to definite schemes the similar sum which was reserved for the provision of buildings and equipment for the more advanced grades of mining education. They also indicate their further intentions in regard to these two matters in the second five-year period, provided by the Act of 1925, and devote a special section to a detailed description of the scholarship scheme which has been established for enabling working miners and their sons or daughters to obtain the benefits of a university life and education.

During 1926 nearly 600 allocations were made, and over £1,250,000 was allocated. Full details of the purposes to which this sum has been devoted are given, and the report is illustrated by photographs and plans of typical developments.

INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

Proceedings at Safety Convention of 1927

THE 1927 Safety Convention of the Industrial Accident Prevention Associations held at Toronto on May 9-10 was the largest and most successful yet held in Canada. There were 830 registered delegates at the Convention, including representatives from Quebec, Ontario, Alberta and British Columbia, and these delegates appeared to have been given something thoroughly well worth while in the addresses that were delivered and in the exhibit of safety devices.

At luncheon on Monday, under the chairmanship of Lt.-Colonel A. O. T. Beardmore (the retiring Chairman), the Hon. W. D. Ross, Lieutenant-Governor of Ontario, delivered a short address, welcoming the delegates and placing emphasis on the need for an extension of accident prevention work in industry in the Province. Following the Hon. Mr. Ross, Mr. James Emery, General Counsel of the National Association of Manufacturers, Washington, D.C., spoke on "The Human Factor". Mr. Emery stressed the need for considering the human factor in all matters relating to workmen's compensation. He indicated that the general trend in industry was towards improved conditions and congratulated the industries of Ontario in having set up an association that was securing definite results for employer and employee.

Other speakers on the first day included Mr. V. A. Sinclair, K.C., Chairman of the Ontario Workmen's Compensation Board, whose address on "Some Phases of Compensation" was given the closest attention and brought out several points of interest. Mr. Sinclair called attention to the increase in minor accidents, and said that the reports to the Board indicated 1926 as the heaviest accident year in the history of the Act in Ontario. Their records, however, showed that mechanical accidents were being reduced, indicating that industry had realized the necessity for this form of protection but that an extension of educational work along safety lines was needed. Mr. Sinclair also touched on the increase in medical aid in the past several years, stating that this had reached a total of about 21 per cent of the entire compensation awarded in Schedule I in 1926.

Mr. Aubrey A. Bond of Toronto spoke on "The Unknown Greatest Englishman" telling the story of Sydney Gilchrist Thomas and his research work in connection with the Bessemer process. Mr. Bond showed how the improvement in processes had made for the safety of the workers in the steel mills. He also brought out at considerable length the details of the development of Germany from an agricultural country to an industrial country through the purchase of the Thomas patents.

Mr. A. G. Greenwood, of Christie, Brown and Company Limited, spoke on "What Accident Prevention has done for us" telling with a wealth of detail the campaign carried on by that company against accidents and the remarkable results secured.

The final paper on the first day was delivered by Mr. L. V. Dixon, mechanical engineer, Dunlop Tire and Rubber Goods Company Limited, in which he gave the story of the effective accident prevention work carried on by his company and told of their steady reduction in accident cases. Mr. Dixon urged that every plant carry on active accident prevention work.

On the second day Mr. H. L. Broomfield, of General Motors of Canada Ltd., Oshawa, spoke on "The Personal Factor in Accident Prevention" and indicated for those present that accident prevention was something more than putting guards on machines and posting a few safety bulletins about the plant. Mr. Broomfield's address brought home to the large audience the thought that accident prevention was a matter that must be worked into the whole daily life of the workers and their families.

Mr. F. H. Schryer of the International Harvester Company at Hamilton told of the work being done at their plant indicating among other interesting points that they had operated with an average of 2,600 workers for 82 days in 1927 without a lost time accident.

Mr. C. Cooper, of Penmans Limited, London, from his experience in industry with the St. Johns Ambulance Association and in the Army, went into detail on first aid work and gave an interesting address including a demonstration of certain methods.

Mr. E. E. Sparrow, Imperial Varnish and Colour Company, Limited, Toronto, spoke on "Inter-Plant Contests," and showed the beneficial results which might come from such contests. He showed how their accident experience had gone steadily down when men in the plant had realized that they were in competition with another plant.

The luncheon on Tuesday was under the chairmanship of Mr. J. C. Callaghan, of the Steel Company of Canada Limited Hamil-

42386—4½

ton, and at this Mr. A. O. Dawson of Canadian Cottons Limited, Montreal, delivered a very effective address on "The Executive's Duty," bringing out from his wide experience of industry suggestions for the executive. It was fairly evident from Mr. Dawson's address that certain very considerable responsibilities are laid on the executive for accident prevention.

The afternoon session on Tuesday was under the chairmanship of Mr. A. Ross Robertson, McGregor and McIntyre Limited, Toronto, and the speakers were Mr. R. T. Herdegen, Dominion Forge and Stamping Company Limited, Walkerville, who spoke on "Self Inspection." Mr. Herdegen suggested that, while inspection of plants by officials of the plant was necessary and desirable, inspection must start with the president and general manager of the plant, who should inspect carefully their own attitude towards the problem.

Mr. William Seymour, of the Algoma Steel Corporation, Sault Ste. Marie, spoke on "Accident Prevention in Hazardous Industries" and told how the Coke Department of the plant, operating for twenty-four hours a day with from one to two hundred men exposed to most of the known hazards of industry, had operated for over two years without a lost time accident.

Mr. J. H. Tapley, Swift Canadian Company Limited, Toronto, in speaking on "Safety Campaigns" told in detail of the various campaigns conducted at his plant and of the results achieved. He said that the men entered thoroughly into the spirit of the competition and he invited all interested to call at the plant at any time in order to see what was being done there.

Mr. W. A. Wecker of the Hayes Wheel Company Limited, Chatham, delivered an address entitled "Where are we Heading?" Mr. Wecker told quite frankly that the experience at their plants in Ontario had been bad, and that little or nothing had been done until they had been stirred into action by officers of the Industrial Accident Prevention Associations. He assured the meeting that all of their plants in Ontario were now heading in the right direction.

The discussions following certain of the addresses brought out some very interesting points, one for instance being that the officials working closest to the men were inclined to attribute accidents to their thoughtlessness or recklessness, and the executive officials were inclined to place the responsibility on executives, indicating a spirit of candour that was highly desirable and indicating also that there was no effort to evade responsibility.

At the Annual General Meeting of the Industrial Accident Prevention Associations, Mr. W. S. Campbell, General Electric Co. Limited, Toronto, was elected Chairman; Mr. F. W. Kimbark, Business Systems Limited, Toronto, First Vice-Chairman; Mr. Alex. E. Adam, Canadian Cottons Limited, Hamilton, Second Vice-Chairman, and Mr. R. B. Morley was re-elected General Manager.

ACCIDENT PREVENTION IN A TORONTO FACTORY

Address Delivered by Mr. A. G. Greenwood, Christie-Brown and Company, Limited, at the Safety Convention of the Industrial Accident Prevention Associations of Ontario, May, 1927.

LET me first of all explain that it is not because of any remarkable record or wonderful achievement on our part that this invitation has been extended by your Program Committee to our company but probably because your able General Manager, Mr. Morley, has noticed from the reports he has received from us month by month that our experience in this line of work has shown a steady improvement during the past six years. Accident prevention has done much for us. First and foremost, it has saved life. It has also lessened suffering. It has saved time and assisted us in increasing production per head. It has saved money not only for ourselves but for others and it has created a better feeling throughout the whole organization and considerably assisted in reducing labour turnover.

Results of Safety Organization.—We started earnestly in accident prevention work with the year 1921 after six years of accidents and fatalities. From 1915, the year in which the Workmen's Compensation Act of Ontario came into force, to the year 1920, we had six fatalities in our plant. Four married men, one single man and one widower met death while at work. Six fatalities in six years, one each year. Besides this loss of life we were reporting to the Workmen's Compensation Board an average of twenty-nine accidents per year and our costs were tremendously high. The Board were paying on an average a total of $11,500 per year for medical aid and workmen's compensation on our account, and the lost time because of the fatalities was never less than 6,262 days in any one of those years.

Our assessments were correspondingly high, and with surcharge bills we paid as much as $8,005 for one year. After one year of accident prevention work, honest effort which included organization, meetings, the placing of responsibility, regular bulletin service, the use of thousands of pay envelope inserts, "stunts" and competitions of various kinds to create, arouse and maintain the interest of the workers, first aid training, foremen's letters and so on, after one year of hard work in accident prevention, we had to report an increase in accident frequency, but we found this to be not altogether uncommon. Other companies both in Canada and the United States had had a similar experience. But while we had to report an increase of 15 per cent in accidents, we had considerably reduced the severity of those accidents, and we were much encouraged by the fact that for the first time in seven years we had operated without a fatality. We may go further and say that since we organized for accident prevention work six and one-third years have elapsed and the annual fatality has not recurred.

We entered the following year full of enthusiasm for this work. We reduced our accidents to fourteen, a number which has not been exceeded in any year since. We reduced the payments made by the Board compared with the payments made the previous year 87 per cent and our lost time was reduced 74 per cent. This was progress indeed. But 1925 has been our best year so far. During that twelve-month period we reported to the Workmen's Compensation Board six accidents, one of which was for medical aid only, the other five minor cases with little money payments and little lost time. In fact throughout that whole year the Board paid but $150.32 on our account for medical aid and workmen's compensation and the lost time was only 36½ days, this with an average staff of 591 workers, working 44 hours per week. Last year our accident frequency remained the same as 1925. Six cases reported to the Board. But one was a slight partial permanent disability for which the Board justly allowed $300. Our payments were, therefore, increased over the 1925 period and our lost time was somewhat higher also. But 1927 promises to be a better year than our record year of 1925, for so far we have reported but three minor cases to the Workmen's Compensation Board. We have been helped by others in our group and class who realize the value of accident prevention work and our rates have steadily but surely been reduced. This year we are paying the Board a sum less than $2,500 compared with the $8,005 we paid in 1920. Compare for a moment if you will the figures during the last six years with those I quoted between 1915 and 1920. What a difference! We do not receive surcharge bills now. We are entitled to merit rating. We have saved life, we have lessened suffering, we have saved time and money and you must realize the atmosphere of security and happiness which has been created throughout the plant.

Methods of Promoting Safety.—Now, to what do we owe this measure of success? First and foremost to the whole-hearted support we have received from the management. In accident prevention work it is necessary that the management should desire to prevent every preventable accident. If you get this whole-hearted support you will progress far in safety, but if you just get from your management a lukewarm, uninterested attitude, you will not be successful. We, at Christies, are fortunate indeed in having as our President and General Manager Mr. Charles E. Edmonds. Mr. Edmonds not only takes a keen interest in the safety of his own plant, but he gives of his time and thought to the work of the Associations. We were not long in accident prevention work before we had a desire to enter into the activities of our Association, and on making enquiry we found that our group came under the Bottlers and Canners Association, an association which was not functioning. Mr. Morley was anxious to reorganize and it was on the invitation sent out from our head office that Class 15 met in this hotel to reorganize. At that meeting our Mr. Edmonds was elected Chairman for the first year. After his term of office he was well succeeded by Mr. Carruthers who, in turn, was ably followed by Mr. Patterson. To these gentlemen, their directors and Mr. Morley, Class 15 especially and safety generally owes a debt of gratitude for the work which they have accomplished during the past three or four years. It is of vital importance that the business gentlemen who hold the chief executive positions in industry in Ontario should give their whole-hearted support to the accident prevention program.

We pay strict attention to first aid. Besides the well-equipped emergency hospital centrally located, we maintain twenty first-aid stations throughout the plant, each station in charge of a trained employee. At each of these stations a small framed notice may be found which says: "This first aid kit is provided for the purpose of dressing all minor injuries and for rendering first aid in case of serious accident." Then follows the name of the employee in charge of the station. It then goes on: "All

small cuts, scratches and puncture wounds must be reported immediately." The names of three doctors follow with their respective telephone numbers, doctors who have offices in close proximity to the plant. The whole notice is easily detachable from the station and in case of accident requiring medical aid can easily be carried to the nearest telephone where time is not lost looking up a doctor's number. We give credit in part to these stations for banishing sepsis from our plant.

We use the bulletin service of the Accident Prevention Associations. We use all the bulletins they send to us and they are posted regularly in the steel frames we purchased from them. We also use some of the bulletins we receive from the Ontario Safety League. We choose those which are applicable, and we use bulletins of local interest which we make up ourselves. One good feature with regard to the bulletin service of late is the standardization in size. The bulletins of the Ontario Safety League will now fit the frames of the Accident Prevention Associations without cutting or folding.

We fought sepsis in our plant through the pay envelope insert method. We lost no opportunity of forcing this message to our workers: "Have a dressing applied to all small cuts, scratches and puncture wounds." I remember some years ago listening to an address given by the late Mr. Price, then Chairman of the Workmen's Compensation Board. His address was on Workmen's Compensation and it was given to the Personnel Managers' Association. During the discussion infection of wounds was mentioned and Mr. Price remembered a very painful case which was reported from our plant. Mr. Price said this: "We gave the workman the benefit," and then it was pointed out that the workman did not report for first aid and did not even mention the fact that he had been injured until two weeks after the original injury, and, when he did mention it he first of all said that he really did not know exactly how it had happened. Mr. Price told us plainly that it is not the employees' responsibility to report for first aid. The responsibility lies with the company. They must make their workers report for first aid treatment. Since then through the pay envelope insert method, we have trained our workers to seek first aid. There is one other point with regard to the pay envelope insert—it always reaches its objective. It ofttimes goes further and enters the home of the worker. There are still many men who take a pride in taking home to the good wife the pay envelope intact and unopened and the good wife in turn will always return to him the safety slip, even if there is only a small percentage of the money going with it.

How to Start a New Man.—Accident statistics tell us that the new man is a hazard. As in everything else, there is a right way and a wrong way of starting the new man. You may fill out a card, turn him over to a junior, who in turn will hustle him to a department and someone will say "go to it." On the other hand, you can take an interest. You can take him to your dressing room, give him a good locker, take him to your cafeteria or lunchroom and provide him with a place at the table, introduce him to someone who will be sitting close to him. You could give him a little talk on safety, not forgetting the injunction to have a dressing applied to all small cuts, scratches and puncture wounds. You can properly introduce him to the foreman of his department, who in turn will put him in charge of an experienced man who will teach him the right way and the safe way of doing his work. Take advantage of the fact that the new man is always ready and willing to comply with instructions. In this way you make a friend, and you not only make a friend but you prevent many a painful accident because your interest in him takes away most of that nervousness which is ever present in a new man starting on the job.

There is one other phase of our work which I should mention and that is our appeal to the pocket-book through the saving and profit sharing plan. We have a plan whereby the workers can share in the profits of the company. The employee's contribution is 5 per cent of his or her wages to a maximum of $104 per year. The company's contribution is 5 per cent of the net profits. Seventy per cent of the eligible employees are members of this fund and they believe in accident prevention just as they believe in anything else which prevents waste and increases the net earnings of the company. We believe that this plan has helped us to train our workers especially in waste elimination, and after all what is a better accident preventive than a staff of well trained, careful and alert employees.

Let us continue in this noble work of accident prevention, not merely because we can save money and increase our production by it, not just because we can save time and reduce our labour turnover, but let us continue in this great work because we are men and as men we are obligated to our fellow-men. Let us leave this Convention full of enthusiasm for the work, and let each one of us ask the question "Am I my brother's keeper?" Let each one answer "I am."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Health of Industrial Population in First Quarter of 1927

THE *Statistical Bulletin,* published by the Metropolitan Life Insurance Company, in its issue for April, states that the health record of the industrial populations of the United States and Canada was better during the first quarter of 1927 than for the corresponding period of any preceding year. This is indicated by the mortality record for January, February and March of more than 18,000,000 people, the Industrial policy-holders of the Metropolitan Life Insurance Company, who constitute more than one-seventh of the total population, and more than one-fourth of the urban population, of the two countries. Their deathrate for the quarter was 9.7 per 1,000. It is true that this remarkable figure was registered once before in the initial quarter of a year (in 1921); but in that year the Company did not insure infants under one year of age. This age period is the one which registers the maximum deathrate, and it is obvious that with infant mortality eliminated, the first three months of 1927 will show considerable improvement over the former minimum deathrate.

"The significance of the above finding should not be minimized. In past years the mortality experience of this large cross-section of the American and Canadian populations has proved a most reliable index of what has occurred in the population as a whole. It is very probable, therefore, that later reports will show that the two countries have enjoyed most favourable health conditions during the first quarter of this year."

Health Survey of the Printing Trades

The results of a health survey of the printing trades in the United States and Canada are given in Bulletin No. 427, published by the United States Department of Labour (Bureau of Labour Statistics). Letters and forms were sent to employers and to the secretaries of the locals of the international unions, principally of the International Typographical Union, information being sought as to the number of employees at work, the number absent from work on account of sickness, etc. As only a few replies were received from Canada these were included with the returns from the United States.

Summarizing the results of the inquiry the report states that the sickness rate in 1922 of the International Typographical Union was 1 per cent; of the International Stereotypers and Electrotypers' Union, 0.3 per cent; of the International Photo-Engravers' Union, 2.2 per cent; of the International Brotherhood of Bookbinders, none; and of the International Printing Pressmen and Assistants' Union, 0.4 per cent. These percentages indicate merely the proportion of men who were absent on account of sickness at the time the questionnaire was filled in. It is noted that while it might have been more desirable if the returns could all have been made of a precisely uniform date, the results have the advantage that they harmonize seasonal effects which might otherwise have become too apparent.

"The sickness rate is so low that it may be challenged on the ground of accuracy, but the corresponding returns made by so many local unions prove that serious errors are not likely to have occurred. They are furthermore confirmed by the low sickness rate from different unions and emloyers. The sickness rate reported by employers was 0.7 per cent. Hence the conclusion would seem fully justified that the present health conditions among printing employees may safely be considered in every way satisfactory.

"Like considerations apply to the relatively low incidence of lead poisoning. In the International Typographical Union, the proportion of such cases was 0.8 per 1,000 of the membership exposed to risk. For electrotypers and stereotypers the proportion was higher, 3.5 per 1,000. There were no deaths from lead poisoning among photo-engravers, or among bookbinders. Among printing pressmen and assistants, the rate of lead poisoning was 0.3 per 1,000. Hence the conclusion that the lead-poisoning risk in all branches of the printing trades is now one of decidedly minor significance."

Competition in Pulp and Paper Industry opens July 1

The *Pulp and Paper Magazine* made the following announcement in its issue of May 26:—

"The *Pulp and Paper Magazine* is endeavouring to encourage safety in the paper industry by offering a trophy for the mill in Canada having the lowest accident record per thousand hours of exposure of employees to hazard. That the efforts made to win this trophy last year resulted in keeping down accidents is indicated by the excellent records made by most of the mills in the competition. The trophy in Class A was won by the Spruce Falls Power and Paper Company, and the Class B shield by the Don Valley Paper Company, the latter with a perfect record.

"The period of the contest is from July 1 to December 31, and indications are that the competition will be keener this year than last. That, of course, is encouraging to those interested in safety, since the keenness of competition means greater attempts at reduction of accidents.

"It isn't merely the winning of the shield that counts; it is rather the knowledge that a real effort has been made to work safely. This effort not only protects the one who makes the effort but also others with whom he works, because the spirit of safety is not merely self-preservation but involves also the consideration of the other fellow."

A note on the last competition appeared in the LABOUR GAZETTE, April 1927, page 414.

Lead Poisoning in the United States

At the request of the miners and workers in the lead mines of Utah, U.S.A., an inquiry covering a period of two years was carried out recently by the Bureau of Mines, with a view to determining the position as regards lead poisoning in the lead mines. The inquiry showed that carboniferous minerals are the main cause of lead poisoning, but disease can also be provoked by sulphurous ores when extracted by dry process, and also in the absence of good ventilation. In the Utah mines the most soluble lead salts are generally found close to the surface and, with rare exceptions, the upper strata of the mines are dry and dusty. The result is that the dangers of lead poisoning are greater at the beginning of the working of a mine, when extraction is going on only a few hundred feet below the surface.

The location of the shafts and ventilation conditions are also of importance. Thus, in parts of the workings remote from air shafts, the plumbiferous dust produced by drilling and blasting remains in suspension in the atmosphere for a longer time than in properly ventilated places. Heat and damp may also be causes of predisposition to poisoning. Generally speaking, workers working under such conditions perspire freely and are more likely to absorb the soluble salts through the skin.

Another important factor is the method employed in drilling and dealing with the resultant sludge. On this subject the Bureau of Mines considers that the exclusive adoption of the wet process and the careful damping of the sludge before loading, combined with adequate ventilation, should reduce the risks of lead poisoning to a minimum.

The Lead Hazard and Compensation

The Department of Labour of the State of New York recently published a bulletin on the lead hazard and compensation. A recent bulletin of the same department on the subject of silicosis was noted in the March issue, page 290. The report points out "that compensation for industrial diseases, as distinguished from compensation for accidents, is of comparatively recent origin. Its introduction has opened to the compensation tribunals a field of obviously vast importance and vast extent; one, however, which is also of vast difficulty and complexity. To determine the extent of a disability and its true cause is, frequently enough, a matter of real difficulty even where the disability is claimed to have resulted from an accident; immeasurably more difficult is it likely to be where the alleged and possible cause is a disease, possibly devoid of acute clinical symptoms; a disease, the very existence of which it may be difficult to predicate with confidence."

Lead poisoning is declared to be easily the most important of the industrial diseases that are compensable. The proper solution of the problems arising from claims of disability or death alleged to have been caused by lead poisoning is thus of importance not only from the standpoint of the number of cases involved, but because such a proper solution must obviously have a large influence on the proper development of the law and procedure of compensation for occupational diseases generally.

The State Bureau of Industrial Hygiene issued the present pamphlet in an effort to relieve this situation. In Part I, the elementary principles concerning the course followed by lead in the body, the symtomatology and diagnosis of the disease are briefly summarized for the lay reader. The difficulties of diagnosis are discussed, and a standardization of terminology is proposed which, it is hoped, will do much to clear the atmosphere of unnecessary differences of opinion as to the definition of terms used. Part II is devoted (1) instructions to physicians as to the preparation of lead cases which are to appear for compensation, and (2) a classification of cases under the new terminology, with a discussion of the State Compensation Law as it applies to these cases.

First Aid Instruction for Ship's Officers

In the United States, candidates for original licenses as master, mate, pilot, or engineer must, by a requirement in the regulations promulgated by the Steamboat Inspection Service, Department of Commerce, first pass a satisfactory examination in the principles of first aid before an officer of the Public Health Service. This regulation, which became operative July 1, 1922, was brought about by the necessity for intelligent first-aid treatment at sea on vessels having no medical officer. Many permanent injuries, and even deaths, among seamen have resulted through the lack of proper attention to minor injuries. In order to assist these candidates and men already licensed, who frequently desire the instruction, the Public Health Service gives regular instruction courses in the principles of first aid at 43 designated marine hospitals and relief stations in ports where the local offices of steamboat inspectors are located. The courses, which are uniform, cover a series of lectures by a medical officer, extending over a period of three weeks. Candidates are instructed in the use and application of commonly used remedies, the dressing of wounds, bandaging, resuscitation, the sanitation of vessels, and the transmission of requests by radio for medical advice. At the end of the instruction period the candidates are examined orally and the successful ones certified to the Steamboat Inspection Service as qualified. Those candidates who are unable to attend the lectures may study approved text books and apply for examination when they consider themselves proficient. An average of 1,702 candidates have been instructed each year since the inauguration of the work, and it will be only a matter of a few years until all licensed officers on vessels of the United States have acquired a knowledge of first aid.

Proposed British Order for Compulsory "Safety First"

The Secretary of State for Home Affairs (England and Wales) recently issued to employers' associations a letter stating that he had provisionally approved the issue of an order requiring the institution of special safety arrangements in the chief accident producing industries.

After quoting statistics showing how much has been accomplished by certain firms which have established safety-first organizations in their works, the letter says that notwithstanding these excellent results there is no sign of any voluntary movement by employers generally to grapple with the question. Accordingly the Home Secretary feels that, in default of voluntary action on the part of the industries themselves, he ought without further delay to exercise the compulsory powers conferred on him by the Workmen's Compensation Act, 1923.

As regards the terms of the draft Order, it is proposed to require the employment by the occupier of a competent safety supervisor, responsible directly to the occupier, and charged with various duties in regard to safety. The Order, however, is elastic, and every occupier would have the opportunity of substituting, with the Chief Inspector's approval, a special safety scheme adapted to the particular circumstances of his works. He would also be able to claim exemption altogether from the Order if he could satisfy the Chief Inspector that other not less effective measures for the prevention of accidents had been adopted.

It is proposed that the Order shall apply to (i) blast furnaces for the smelting of iron ore; (ii) iron and steel rolling mills, including tube works; (iii) engineering works in which more than 500 persons are employed, as follows:—Forges, engine building, making of transmission machinery, constructional engineering, hydraulic engineering, electrical engineering (making of dynamos and motors, and cable making), making of agricultural and industrial machinery, making of railway, tramway, and motor vehicle plant, ordnance works; (iv) iron foundries in which more than 50 persons are employed; (v) shipbuilding works.

"No-Accident" Bonus Plant of New Jersey Transport Companies

The Public Service Railway Company and the Public Service Transportation Company, operating 800 miles of street railway trackage and 600 miles of auto bus routes in New Jersey, have instituted a novel bonus system designed to reduce the enormous expense involved in accident claims which they are obliged to pay annually. For every week in the year ending December 2, 1927, in which the employee has no accident of any kind, he will receive a bonus of $1, to be paid in a lump sum on or about December 15, 1927. Every man who maintains a clear record for 52 weeks will receive an additional $8, as a testimonial to his good record. As a means of stimulating day by day interest, bulletin boards are posted in the car barns and garage terminals. The name of each motorman and chauffeur is recorded there. For each week of the current month during which no accident is charged against the operator a white

star is placed opposite his name. For each week in which one or more accidents are charged to his record a red dot is posted. The bulletin is changed monthly, but will be cumulative, showing the credits and demerits to date. If the plan is continued after the first year a permanent Roll of Honour will be erected, to contain the names of those operators whose record has been clear for a whole year.

It is not to be expected that accidents will cease to occur entirely. If they did it is stated that the companies' outlay would amount to slightly more than a quarter of a million dollars annually, $60 each to 4,500 operators. No special provision is made for financing the plan. Bonus funds will be paid out of operating revenues and charged to wages.

Accidents and Compensation in Ontario during May

There were 5,953 accidents reported to the Ontario Workmen's Compensation Board in May. These figures included 33 fatalities. In the same time benefits awarded amounted to $502,114.72, of which $87,632.07 was for medical aid, which figures are considerably higher than in May, 1926, when $432,408.18 was awarded by the Board. So far this year the total benefits awarded by the Workmen's Compensation Board amounted to nearly $2,500,000 or, roughly, half a million dollars for each month of 1927 to date.

Commenting on these accidents, R. B. Morley, General Manager, Industrial Accident Prevention Associations, mentions one in a plant where a mill room hand had his head caught between the descending elevator and the gate at the second floor; another where a woodworker had his hand crushed while operating a jointer, resulting in complete amputation of the right hand at the wrist; a third where an operator in a sheet metal plant lost his finger while operating a press; a fourth severe injury due to an engineer catching his heel on the stairs and falling to the bottom; another where a foreman testing a motor was electrocuted; and another when a fireman unloading rubbish was killed when the horse shied and crushed him between the wall and wheels of the wagon. Mr. Morley comments particularly on the increase in minor accidents in the last year or more, and recommends that everyone connected with industry make a special effort to reduce the number of accidents both serious and minor for the benefit of all connected with industry.

Outdoor Recreation for Industrial Employees in United States

The *Monthly Labour Review* (published by the United States Department of Labour) has an article in its May issue showing the effect of shorter working hours in furthering outdoor recreation for industrial employes in the United States. The importance of outdoor recreation was emphasized by the President of the United States in the call for a general conference of federal, state and local authorities and of semi-public and private organizations interested in public welfare. This conference appointed a special committee to investigate the value of outdoor recreation to industrial workers, and the Bureau of Labour Statistics was deputed to find out what provision is made by industry for its employees in this direction. Two factors operate against the development of "plant sports," namely the fact that so many employees now own cars, and the fact that so many own their own homes where they find occupation for their leisure hours. But nothwithstanding these and other difficulties such as that of obtaining suitable grounds in congested centres, plant recreation is now widely spread through many industries. The form of sport adopted is usually left to the employees to exercise their own preference. In the present study 430 companies, the great majority of which employ more than 300 employees and many of them many thousands, were found to be carrying on one or more activities promoting health, comfort, or general welfare of the employees. Three hundred and nineteen of the companies, with approximately 1,300,000 employees, were reported as providing facilities for various forms of athletics or other kinds of outdoor recreations. The accompanying table shows the forms of recreation that are favoured in the various classes of industry.

The report concludes by stating that with the increasing specialization in manufacturing processes and the consequent monotony and dulling of interest on the part of the workers it is imperative that a systematic effort should be made to furnish an incentive to such workers, and nothing, it seems, can better meet this need for self-expression than the friendly rivalry and interest furnished by competitive sports and games.

NUMBER OF ESTABLISHMENTS HAVING ATHLETIC CLUBS, OUTDOOR RECREATION FACILITIES, AND OUTINGS FOR EMPLOYEES, BY INDUSTRIES

Co-operative Industrial Research in Great Britain

The Department of Scientific and Industrial Research of Great Britain recently published an account of the various investigations made since the establishment of this organization. The Research Association scheme was launched in 1918, and up to March 31, 1926, the Department had paid in grants approximately £570,000, while subscriptions from the industries concerned amounted to £564,000 excluding £265,000 promised or paid to the Cotton Research Association by the Cotton Trade War Memorial Fund. The greater part of the publication is taken up with a record of the results of industrial value obtained by research associations, but there are also useful references to the indirect benefits resulting from the scheme and to the general influence of research associations.

With regard to investigations carried out by the British Electrical and Allied industries Research Association, it is stated that data are now for the first time available for estimating the temperature of any cable or group of cables laid in any kind of soil and by any of the methods in general use, and for the determination of the relative merits of the different methods of laying cables in respect of their temperature rise.

Much work has been devoted by the Scientific Instrument Research Association to the problems arising in the production and use of optical and coloured glasses, and the method for determining the light absorption of optical glasses developed by the association has been of service in comparing the transparency of British and foreign glasses.

With regard to cotton manufacture, a great deal of research has been devoted to the processes of steeping, scouring, bleaching, and dyeing.

As a result of the Launderers' Research Association's efforts, at least 50 laundries have installed water-softening plants, and it is estimated that a saving of more than £4,000 a year in the aggregate has accrued to those laundries.

The Research Association of British Motor and Allied Manufacturers have advanced the knowledge and technique available to various branches of the industry.

A research relating to the crystallization of cane sugar from syrups has been carried out on highly scientific lines and has shown how it is possible to obtain a gerater quantity of sugar syrup than was previously obtainable. The association for such research work has also shown the manufacturer how to avoid the occurrence of mould, fermentation and granulation in jams, and the results have been of considerable benefit. The work has further led to the complete abandonment of the use of preservatives.

A concluding paragraph points out that the movement has not yet secured, in the majority of cases, either the degree or range of support that will enable it to become the powerful factor in the restoration of industrial prosperity which it might and ought to be. "The industrialists of some other nations," it is added, "are, in many directions, still ahead of us in the systematic application of science in their business, and they show more scientific imagination in making plans for the future."

ECONOMIC POLICY OF ORGANIZED LABOUR LAID BEFORE INTERNATIONAL ECONOMIC CONFERENCE

REPRESENTATIVES of organized labour were among the official delegates from various countries attending the International Economic Conference held at Geneva in May. The work of the labour representatives was co-ordinated in accordance with a plan of action which was agreed upon at a special meeting held on May 3, the day before the opening of the Conference. This meeting had been preceded by a joint conference between representatives of the International Federation of Trade Unions* and the Socialist and Labour International, these bodies representing respectively the economic and political branches of the activities of organized labour. W. C. Mertens, president of the Belgian Federation of Labour, presided over the joint conference. It was attended by twenty-six labour men and women from twelve countries, and a statement of policy was drafted for approval by the general body of workers' delegates. Approval having been expressed at the special meeting on May 3, the document was presented to the conference as a statement of the economic policy of organized labour. After pointing out that the labour organizations welcomed the holding of the Economic Conference as a step toward eventual world-wide economic co-operation, which ought to result in a general raising of the standards of living, and regretting the fact that so few labour representatives had been chosen for the conference, the statement continued:—

"Nevertheless, they will duly perform their part in the labours of the conference and will assume their responsibility as the promoters of a future world economic order. They will insist not merely on the discussion of the cardinal problems of world economics, but also that practical work shall be undertaken with a view to the development of world economic co-operation.

"In this connection four fundamental objectives must be pursued: (1) The removal of impediments to international commerce. (2) The improvement and standardization of labour conditions in all countries. (3) The supervision of international monopolistic combines with a view to protecting consumers and workers. (4) The intensification of agricultural production and the improved organization of its market.

*The Trades and Labour Congress of Canada is affiliated to this organization.

Promotion of Freer Commerce

"The rational development of the division of labour, as between countries, is hampered by an excess of obstacles to free intercourse. Import and export prohibition must be abolished by international conventions. Immunity from duties must be applied to all the raw materials of industry and agriculture, and also to food products. Duties on manufactured goods must be minimized. In particular the demolition of European customs barriers is an essential preliminary to the recovery of the economic life of Europe.

The first steps toward this end are: The compilation of a standardized customs tariff scheme, and agreements for the unification and simplification of administrative regulations affecting the transport of goods. Further, standardized principles for the general provisions of commercial treaties must be established. The principle of the most favoured nation must be maintained, and its application must not be interfered with by overspecialized tariffs or other measures.

"The formation of customs unions may serve as a preparatory stage toward the gradual abolition of customs barriers, but the organization of an international collective economy implies the supersession of such unions by a comprehensive organization founded on economic solidarity, just as separate treaties between peoples will have to give place to the comprehensive organization of the League of Nations.

Raising of Labour Standards

"The motive of isolating markets in order to destroy the competitive advantage arising from the existence of low labour standards must be eliminated by the improvement and international levelling up of the conditions of labour. International conventions concerning working hours, the effective protection of labour and unemployment insurance are for this reason indispensable not merely from the point of view of social policy but also on economic grounds. Hence it is imperative that there should be ratification and strict application of the Washington Convention on Working Hours and of other conventions drafted by the International Labour Organization.

International Industrial Organization

"International combination of enterprises or organizations for the purpose of dominating the market and regulating production may in many cases tend to promote the establish-

ment of systematized economic life, and accordingly must not be checked by prohibitions. The representatives of the manual and non-manual workers' organizations point out, however, the grave dangers arising from uncontrolled international combinations of capitalist enterprises and emphatically demand the effective protection of the community against such dangers.

"They therefore recommend the establishment of an International Economic Office which must carry out a general inquiry into all such international relationships and exert permanent supervision over all international agreements and their reaction on the conditions of the market. Similar supervisory offices should also be set up in all the separate States. The first business of this supervision is to insure sufficient publicity being given to all agreements arrived at and to the whole policy of such association. The second task is to restrain any policy recognized as injurious to the community in the sphere of price fixing and in that of the unequal treatment of various sections of the market.

"In connection with the international organization of industry arises the problem of scientific management. For international combinations frequently aim, not at commercial, but also at technical improvements. The working class is not in principle opposed to scientific management. But it can only approve it, as it can only approve the advance of organization in industry, under definite conditions. The worker must be protected against increased mental and physical exhaustion by a corresponding reduction of working hours. The benefits from scientific management must accrue to the workers and consumers through better remuneration and lower prices. And the unemployment arising from scientific management must be overcome.

Agricultural Organization

"The position of agriculture is increasingly claiming the attention of manual and non-manual workers. An improvement in the productivity of agriculture will favour the securing and increasing of real wages. At the same time it will assist the marketing of industrial products and thereby the overcoming of crises. The first steps to be considered toward increasing the productivity of agriculture are: Advances in technique, in the machinery of credit, improvement in the marketing of agricultural products, especially by collaboration between agricultural and consumers' co-operative organizations, and by the extension of the division of labour as between countries.

Proposed International Economic Office

"The world economic tasks, which have led to the calling of the Geneva conference, cannot be settled at this first opportunity of contact. For the application of the decisions of the Economic Conference, for the continuation of its labour, and at the same time for the development of international economic statistics and for the observation of crises, an International Economic Office should be set up.

"On the Governing Council of this office should sit, in addition to the representatives of States, representatives of the industrial and agricultural producers (employers and workers in equal numbers) and representatives of consumers. Co-operation with the International Labour Office should be insured by mutual representation."

THE TRADE UNION MOVEMENT IN INDIA

AN outline of the history, present standing, and aims of the Trade Union Movement in India is given in a pamphlet by Mr. N. M. Joshi, M.L.A., J.P., of Bombay, published at Poona. India, he points out, is mainly an agricultural country, 230 millions of its total population* being supported by agriculture. About 100 millions of these are said to be actual workers, this number including cultivating landlords and tenants, as well as wage earners. The wage earning agricultural workers number 21.6 millions. Mr. Joshi estimates that there are about 25 millions of wage earners on the land. Organization of these workers, who are the lowest paid in the country, into trade unions, is a difficult matter, owing to their being scattered over a very wide territory.

Industry maintains a total population 33.1 millions, of whom 15.17 are actual workers, and 11.8 millions are in receipt of wages. Transport maintains a population of 4.3 millions, of which 1.9 millions are actual workers; out of these 1.5 millions may be estimated as wage-earning employees. Trade supports a population of 18.1 millions, of which 8 millions are actual workers, out of whom at least 4 millions may be estimated as wage-earning employees. Public administration supports a

* The total population of India, including the British Provinces, Indian States or Agencies, etc., was given in the census of 1921 as being 318,942,480.

population of 9.8 millions, out of which 4 millions are actual workers, who are all wage-earning employees. Domestic service maintains a population of 4.5 millions, out of which 2.5 millions are actual workers and wage-earners. Mining supports a population of 540 thousands, of which 347 thousand are actual wage-earning workers. The total number of wage earning employees in industry is thus about 49.1 millions. The work of organizing these vast numbers of workers, Mr. Joshi thinks, must begin in the towns; and in towns with over 10,000 population there are 3.7 millions of wage earners, their chief occupations being in connection with plantations, transportation, textile and connected industries and mines and quarries.

The trade union movement was started in India between 1918 and 1920, mainly owing to three causes, first, the labour unrest caused by rising prices and low wages; second, the establishment of the International Labour Organization (League of Nations), which gave workers' organizations the right to send representatives to the conferences at Geneva. This led to the first meeting of the All-India Trade Union Congress in 1920; and third, the political ferment of the period after the war.

The trade union movement is stated to be steadily expanding. The Directory of trade Unions published by Mr. R. R. Bakhale, as Assistant Secretary to the All-India Trade Union Congress, gives a list of 167 Associations. Out of this number about 60 organizations cater for Government servants.

The total membership of all the organizations of Government servants may be estimated at 50,000.

The railway employees are organized into 25 organizations with a total membership of about 50,000.

The textile workers are organized into 20 unions with a total membership of about 32,000.

In the printing trade there are four or five unions with a membership of about 6,000.

To sum up, the result of labour organizing work during the last seven years is that, excluding the Government employees' organizations with a membership of 50,000, there are about 100 trade unions in India with a membership of about 1,460,000. The all-India Trade Union Congress started in the year 1920 is the central organization of the trade union movement in India. This organization has really preceded the establishment of its constituent units.

Most of the unions in India have adopted a structure based more on industry than on crafts. The only important exceptions are the five textile unions at Ahmedabad. But even in their case, their craft character is greatly modified by all the unions having a common office, a common president and a common secretary. The activities of the Unions are so far confined to attempting to secure the redress of the grievances of their members by making representations to their employers. There are hardly any, except perhaps half a dozen, unions financially strong enough to render any monetary help to their members during a strike, much less in a prolonged strike. There is no union in India which has yet made a beginning of paying either sickness or unemployment or superannuation benefits. In this connection Mr. Joshi remarks that "when the British unions developed their insurance activities, the principle that the State should undertake the work of insuring its citizens against the risks of unprovided-for sickness, unemployment and old age, was not generally accepted; but that principle is now generally accepted. It is certain the State even in India will have to take up these responsibilities at an early date."

Mr. Joshi considers these achievements in organization fairly good considering the high percentage of illiteracy in India. "There is no method," he says, "of making people realize their true condition, and the necessity of improving it. Moreover, ignorant and illiterate people who are always being exploited by all classes of people are, naturally, very suspicious of approaching even their real friends." The second difficulty is that of the extremely low wages and the poverty of the people.

The pamphlet contains a section dealing with the welfare activities of some of the employers. The attitude of the unions towards welfare work is stated by Mr. Joshi: "The trade unions," he says, "stand first for an adequate wage. They know that the amount spent on welfare work can never be so large as to be a full compensation for an inadequate wage. * * * Trade unionists want conditions standardized. When welfare work is standardized, workers will not oppose it. British workers not only did not object, but approved of the establishment of the Welfare Fund under the English Mines Act of 1920. But those employers who seek to secure an advantage over their rivals cannot approve of such standardization. If trade unions are to approve of welfare work it must be undertaken with clean motives and not in a spirit of rivalry or competition among employers or in a spirit of hostility to trade unions."

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Technical Education for Paper-Makers

THE following resolution was adopted at a recent convention, in Albany, New York, of the International Brotherhood of Paper-Makers:—

"That the International President appoint a committee of five members of the organization to visit the trade schools now in existence that teach by correspondence or by community class studies, paper-making technique, and investigate the whole possibilities of education in the arts required for paper making, and upon the conclusions of its investigations and studies, report its findings to the International Executive Board:

That if the recommendations of the committee be such that an educational program shall be undertaken, the Executive Board shall have power under this resolution to carry the plan into execution as rapidly as time will permit;

That the members of the committee be compensated for their labours in accordance with Sections 1 and 2 of Article 7 of the Constitution, and that the report of the finding of the committee be published in the Paper Makers' Journal."

In commenting on the resolution the *Paper Makers' Journal* says:—

The resolution before us proposes to appoint a committee to investigate and to study the situation pertaining to the need of education in the paper mills, and at the conclusion of its studies to recommend a program. The purport of the resolution is technical education, or more specifically, a greater insight into the art of manufacturing paper; for within this art is contained many fundamental rules, which we propose to have more clearly defined for us, giving us a greater appreciation of our part in the industry as a craft union, functioning to the end that we may protect the industry by wise action, that we may protect our best interest as workers, and that we may give to the practical men who have started in at the bottom and who have on their merits been promoted to the highest positions in their craft, qualifications and opportunity to go still forward in the industry as executives and promoters of its enterprises.

Report of the Work of the United States Federal Board for Vocational Education

The following extracts are taken from the 1926 Annual Report of the United States Federal Board for Vocational Education.

During the last fiscal year the work has gone on without any marked changes so far as administrative relations with the States are concerned. The same cordial co-operative relations have continued to exist as heretofore. The total State and local funds utilized for the operation and development of the programs of vocational education and of civilian vocational rehabilitation have continued to exceed the amounts required to match Federal funds. On the basis of figures officially reported, for each dollar of Federal funds there has been provided for vocational education $2.54 and for civilian vocational rehabilitation $1.19. The program of vocational education in the States is financed from three sources:—(1) Federal, (2) State, and (3) local. From either or both of these last two sources the States have continued to provide funds, frequently considerably in excess of the amount required to meet the Federal allotment. The total funds have continued to increase at the same ratio as for the preceding fiscal year, and the Federal funds have also increased, reaching the maximum at the end of 1926. In round figures $7,000,000 was expended from federal funds and $23,000,000 from all sources during the year.

Every State co-operating with the Federal Government in the promotion and operation of programs of vocational education has its own legislation and its own policy as to the special use which it makes of Federal funds, within the limits imposed by its own approved State plan. Up to approximately three years ago it was the policy of practically all States to distribute Federal funds to all units reimbursable under the State plan and under the supervision of the State board for vocational education. Consequently, the reports of the number of reimbursable units and the enrolment therein formed a correct picture of the condition of the program in each State and, therefore, in the entire country. Within the last three years, however, a number of States have changed their policy and have concentrated the use of Federal funds on the promotion of certain types of work. As a result there are now in a number of States units reimbursable under the State acts which meet the requirements of the State plan and which are under the supervision of the State Board for vocational education, but which receive no Federal aid. In proportion as this policy has been adopted by various States, and enrolment reported is confined to units toward whose maintenance Federal funds are applied it is evident that the enrolment in federally aided reimbursement units or schools does not present a true picture of the condition of the programs—for example, the present policy of certain States is to utilize Federal funds only for new local programs, financing programs

already established entirely from State and local funds.

One commonly accepted measure of the development of an educational program in terms of the service which it renders is the enrolment. This feature of federally aided schools shows the very gratifying increase distributed between the various types of schools, the total enrolment in all classes being over 880,000.

The national vocational education act makes specific appropriation for the training of vocational teachers. These funds have now reached their maximum of $1,100,000 and the problems of the State boards for vocational education in the different States has been to secure the most efficient return for the expenditure of these funds and the equal or excess amounts provided from State and local funds. Here the general tendency has been to secure a more efficient use of these funds through the adoption of better organizations for the carrying on of the work of teacher training. Among these have been the employment in various States of itinerant teacher trainers and local supervisors charged with the responsibility of aiding local teachers in their respective communities along with an increased use of teacher-training funds for training given to teachers already in the service. These developments represents a more efficient use of State and Federal funds, and there is every reason to believe that this development will continue during succeeding years.

Importance of Education in Commerce

The scheme for establishing and maintaining scholarships for assisting and encouraging young men to pursue a commercial career in the Manchester cotton goods export trade and for enabling them to obtain an education and training suitable for such a career was recently placed before a special general meeting of the Manchester Chamber of Commerce. Messrs. Herbert Whitworth, Limited, of Manchester, have invested £10,000 in the purchase of a 3½ per cent conversion loan of £13,000 in order to establish what is to be known as the Herbert Whitworth, Limited, Scholarship Fund, and propose to transfer it to the Manchester Chamber of Commerce as trustees. The plan had been referred to by Sir Percy Woodhouse, the chairman, in some detail at the annual meeting of the Chamber. He said that nobody would deny that if the Lancashire trade was to maintain its premier position there would be greater need than ever before for their places to be filled by young men with the best possible training. Messrs. Whitworth, he claimed, were making an investment on which a yield would be obtained—not, indeed, for themselves alone, but, thanks to their generosity, for the trade as a whole—a yield many times more than a hundred per cent. He predicted that the successful candidates for these scholarships would be much sought after in years to come. Meanwhile, business houses generally might do well to recognize the real value of a sound education. When a boy came first into business it might not matter much whether his education had been of an elementary or higher character. But, given equal natural ability, the man who would be of most value would be the one whose education was long enough and scientific enough to equip him with a background of knowledge and an aptitude for learning as he went along. They might have to take him at 16, 17, or 18 years of age. He knew it was frequently less convenient to do so than to start boys at 14 or 15. But he was sure it paid in the long run, and he appealed to business firms not to bar out these boys with higher education. The sacrifices their parents had made to give them a better start in life deserved some reward, and he was convinced that those firms who followed his advice would not regret it.

Technical Education in Pulp and Paper Industry

The American Paper and Pulp Association recently received a report from the Superintendents' Committee on Education, making the following recommendations:—

1. That in each paper making centre provision be made for the full time services of an educational director, whose qualifications would be the ability to inspire, organize and supervise groups of men either in class or correspondence study.

2. That each mill organize a committee of three to co-operate with the educational director, where there is one, or otherwise to make use of such agencies as are available.

3. That every possible effort be taken to keep before the personnel the means provided for study of the industry, and the value of such study in the progress of the individual.

4. That all the divisional meetings of the Superintendents' Association include in their programs a paper on some phase of vocational work in the pulp and paper industry.

The Committee also stated that the members would be pleased to act in an advisory capacity with the educational committee of any mill desiring to inaugurate an educational program.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Tenth Session of the International Labour Conference

THE Tenth Session of the International Labour Conference opened at Geneva on May 25th with an attendance of nearly 350 delegates and advisers from the governments, employers and organized workers of 42 countries.

Sir Atul Chatterjee, the High Commissioner for India in London, was elected President of the Conference. The following Vice-Presidents were also elected: His Excellency G. de Michelis, government delegate from Italy; M. Oersted, employers' delegate from Norway; and Senor Caballero, workers' delegate from Spain.

It is intended that an article will appear in the July issue of the LABOUR GAZETTE dealing with the proceedings of the Conference.

Social Insurance

In accordance with a request which was adopted at the 7th Session of the International Labour Conference in 1925, dealing with general problems of social insurance, it is understood that the Governing Body of the International Labour Office will submit the question of invalidity, old age, and widows' insurance to an early session of the Conference. The question of sickness insurance has been under consideration at the Session which opened in Geneva on May 25.

Governing Body of the International Labour Office to meet in Berlin

The Governing Body of the International Labour Office has decided that the October meeting of this body will be held this year in Berlin, on the invitation of the Government of Germany. It has been proposed by the Polish Government to invite the Governing Body to hold its October session next year in Warsaw.

Great Britain and the Hours Convention

In the British House of Lords on May 4 Lord Parmoor called attention "to recent discussions at Geneva on the subject of an international Convention for an eight hour day, and generally to the question of the ratification of international Conventions." After recapitulating the history of the adoption of the Washington Hours Convention and the subsequent discussions and negotiations concerning its ratification, he expressed the hope that the Government would now be able to say that the time had come when ratification could be made effective.

The Earl of Balfour (Lord President of the Council), on behalf of the Government, replied that the object and policy of the Government was to proceed with the necessary legislation and then immediately with the policy of ratification. They must, however, be clear as to the interpretation of the Convention. What was wanted was not merely that all the great industrial powers should ratify, but that they should all do so knowing exactly what they were ratifying. There were therefore questions of consultation with other great industrial powers, as well as of consideration of the precise terms of British legislation. In addition, there must be not only a common policy, but simultaneity of action. He did not think that this would be difficult to attain, but it must be attained. He did not anticipate that there would be any undue delay in dealing with the question.

Viscount Burnham pointed out that, so far as Great Britain was concerned, ratification would hardly have any practical effect, since the eight hour day was already in force. The delay had been due to the rigidity of the terms of the Convention and to the difficulty of reconciling it with the railway agreements. But since the Conference of Labour Ministers in London and the negotiations that had taken place through the International Labour Office, there was now no reason why Great Britain should not ratify subject to conditions.

Lord Parmoor said that he was glad to hear that ratification would be pressed forward.

Administration of Labour Law in Germany

The May issue of the *International Labour Review*, the monthly journal of the International Labour Office, contains an article on the administration of labour laws in Germany, by Hugo Siefart, formerly Director in the German Federal Ministry of Labour. Articles have already appeared in this publication describing the national system of administration of labour laws in England and in France. The task of describing the system of administration in Germany has been rendered most difficult by reason of the fact that this part of the German judicial system is passing through a period of transition at present. During the last thirty-six years there has grown up in Germany alongside the ordinary civil courts an extensive and complicated system of special courts for dealing with disputes concerning labour matters. Reorganization of this system has become urgent, and the neces-

sary changes have been embodied recently in a Labour Courts Act, which sets up a complete organic structure of labour court authorities with wide jurisdiction and with their own rules of procedure, adapted to the needs of the world of industry and labour and the disputes arising within it, even though essentially based on the rules of civil procedure of the ordinary courts. With a few exceptions, the labour cases formerly within the jurisdiction of the ordinary civil courts are to be transferred to the labour courts, and the various special courts for labour mattters will ultimately disappear and be replaced by labour courts. The Labour Courts Bill has recently been passed by the German Reichstag and measures to carry out its provisions are already in hand. Naturally the new Act cannot be properly understood without some knowledge of the previous situation and the consequent need for reform. The present article, dealing with the existing system of administration, is, therefore, of widespread interest to all who are desirous of acquainting themselves with the new system.

Credit Co-Operation

An article dealing with credit co-operation as adapted to the needs of the worker, by Mr. Roy F. Bergengren, Executive Secretary of the Credit Union National Extension Bureau, Boston, Mass., appears in the May issue of the *International Labour Review*. The following observations are reprinted from an introductory note to this article:—

Reference has been made on many occasions to the fact that the practice of selling on credit is a menace both to the free disposal of wages and to the independence and dignity of the wage earner. Consumers' co-operative societies have performed a task of both educational and liberative value in this respect, by encouraging among their members the principles of cash purchase, and in various ways organizing and assisting their efforts to save. A tendency—now rapidly spreading both in the United States and in some European countries—to stimulate production by the encouragement of sales on the instalment system, with various other "advantages," constitutes a new and grave danger to the worker earning a small or moderate wage. Special consumers' credit banks have been established; these, however, may be criticised as resulting in raising the price of articles purchased with their assistance (interest on capital invested, insurance of risks, general expenses), and moreover it may be said that their object is to increase the temptation to purchase, which may in turn result in the worker getting into debt and virtual thraldom. The aim of sound credit, in so far as it may be considered indispensable, should be, not to tempt the consumer to make unnecessary purchases by offering facilities, but to make possible some necessary purchase with a view to which he has already made endeavours to save. Moreover, credit will be characterized by sincerity if it is organized, not by the sellers or on their behalf, but by the purchasers—for their own purposes and under their own control. The aim of the following article is to show how sound credit has been organized on co-operative lines and in a form adapted to the needs of the working classes. It also demonstrates the results of this system, which, says Mr. Bergengren, "has been described as the instalment plan in reverse—saving by instalments to make cash buying possible."

Japan and Seamen's Exchanges

A free employment exchange service for seamen in Japan has been instituted under the joint control of the shipowners and seamen of that country. The joint maritime board which is in control of this service consists of twelve members: six chosen from among shipowners and six from the seamen. It is stated that in addition to the employment service, this board will be called on to deal with all maritime labour problems.

"International Directory of Co-Operative Organizations"

The International Labour Office has just published a new edition of the International Directory of Co-Operative Organizations. Like previous editions, but in a more complete and detailed manner, this edition gives the most precise information possible in relation to: (1) international co-operative organizations; (2) the organizations (federations and other bodies) representative of the different forms or tendencies of the co-operative movement in each country.

The first part contains a list of international organizations followed by lists, arranged according to countries (44) of more than 700 national organizations.

The second part includes information showing the number of co-operative societies, the classes to which they belong and their turnover; also information in relation to co-operative banks and credit institutions, co-operative insurance societies and central mutual insurance funds.

Migration Movements 1920-1924

The International Labour Office (Geneva) has issued a report entitled "Migration Movements 1920-1924" in continuation of a similar report published last year on migration move-

ments from 1920 to 1923. The number of countries furnishing statistical information regarding migration for this report is seventy-four, compared with sixty countries for which information was given in the earlier volume. The number of individuals covered by the migration statistics utilized for the present study is 10,040,475, for the five-year period 1920 to 1924, while that of individuals covered by immigation statistics is 12,168,131. For the year 1924 alone the corresponding totals are 1,997,432 and 2,298,279 respectively. Reference is made to the restrictive laws adopted in the United States within recent years, and to the effect of these laws in diverting immigration to Canada, the Argentine and Brazil.

Occupation and Health

The latest volume of "Occupation and Health," an encyclopædia, of Hygiene, Pathology and Social Welfare, studied from the point of view of labour, industry and trades, which is being issued in parts by the International Labour Office, contains brochures dealing with the following diseases and industries: Mouth and Teeth (occupational affections); Woollen Manufacture; Bleaching Powder—Chloride of Lime; Carbon Dioxide —Carbonic Acid Gas; and Coal Miners' Diseases.

EMPLOYMENT SITUATION AT THE BEGINNING OF MAY AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THE Dominion Bureau of Statistics tabulated reports from 5,948 firms who reported a decidedly upward movement in employment on May 1, the expansion being the largest indicated on that date in any year since the record was begun in 1920. The payrolls of these employers were increased by 36,704 persons to 830,850 on the date under review, when the index, reflecting the gain of over four per cent, rose to 100.6, as compared with 96.2 on April 1, and with 94.3, 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. The accompanying chart shows the favourable situation as compared with earlier years of the record.

Manufacturing, construction and transportation recorded the most pronounced improvement, but large gains were also noted in trade, services and communications. On the other hand, there was seasonal curtailment in logging.

Employment by Economic Areas

Heightened activity was reported in all provinces, but Quebec and Ontario registered the largest increases.

Maritime Provinces.—Additions to staffs were indicated in the Maritime Provinces, where 512 firms reported 66,376 employees, or 1,843 more than in their last return. This gain contrasts with the decline indicated on May 1 last year; the index then was nearly six points lower. Manufacturing and construction showed the greatest advances on the date under review, while transportation was seasonally slacker.

Quebec.—General improvement was recorded in Quebec, according to 1,302 employers with 235,474 workers, as against 222,004 in the preceding month. Large increases were made in manufacturing, transportation, construction and maintenance, services, trade, mining, communications and logging, those in the last-named being due to river drives. Employment was in considerably greater volume than on the corresponding date a year ago, when the increase was only about half as great.

Ontario.—The expansion in Ontario on May 1, 1927, was the largest reported on that date since the record was begun in 1920; 13,491 persons were added to the working forces of the 2,726 co-operating firms, who had 348,957 employees. Manufacturing, construction and transportation registered the most extensive gains, but the movement was also upward in trade, mining and some other industries, while logging was seasonally slacker. The situation was decidedly better than on May 1 in any other year since 1920.

Prairie Provinces.—Manufacturing, transportation, services and construction showed heightened activity, the advances in the last-named being most marked. Statements were tabulated from 765 employers, whose staffs rose from 100,436 on April 1, to 105,630 on the date under review. This expansion was greater than on May 1 in any of the last three years, in each of which the index was lower.

British Columbia.—The improvement in British Columbia was not so pronounced as in the spring of 1926, or of 1925; the index on May 1 last year was rather higher than on the

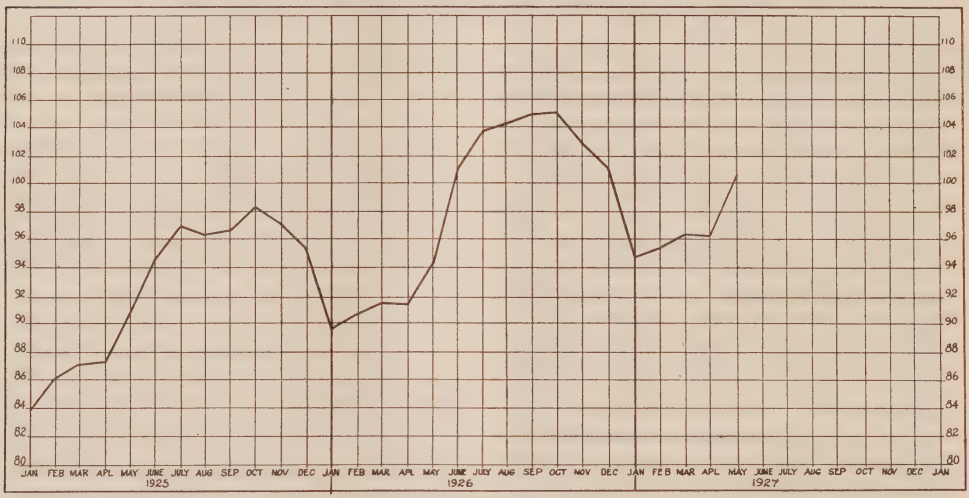
date under review, but in 1925 it was lower. An aggregate payroll of 74,413 workers was indicated by the 639 firms furnishing data, who had 71,707 in the preceding month. Manufacturing, logging, transportation, trade and construction were decidedly busier, the greatest advances taking place in the construction group.

Table I gives index numbers by economic areas.

Employment by Cities

The eight cities for which separate returns are tabulated showed increased activity, Montreal and Toronto registering the most marked gains.

Montreal.—Transportation, construction, trade and manufacturing recorded the largest advances in Montreal, where 710 employers added 3,669 workers to their payrolls, bringing them to 114,829 at the beginning of May. Somewhat smaller increases were indicated on the corresponding date last year, when the index stood at 96.0, as compared with 100.6 on May 1, 1927.



Quebec.—Statements were tabulated from 90 firms with 9,724 employees, as against 9,394 on April 1. This general gain involved fewer workers than that recorded on May 1, 1926, but the index then was lower.

Toronto.—Manufacturing, notably of rubber products, transportation, construction and trade made important increases in personnel in Toronto, according to data furnished by 777 employers, whose payrolls aggregated 102,198 persons as compared with 99,354 at the beginning of April. This expansion, following the large increases recorded in the preceding month, resulted in the highest level of employment since the record for the cities was instituted in 1922.

Ottawa.—Lumber mills and construction registered the bulk of the improvement in Ottawa, where the advances considerably exceeded those noted on May 1 of previous years of the record. Statistics were tabulated from 127 firms employing 10,797 persons, compared with 9,775 in the preceding month. The

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Windsor and the Other Border Cities.—Considerable recovery was shown in the Border Cities, although some of the large automobile factories were on short time. Returns were tabulated from 87 firms with 11,008 workers, index was higher than in any month last year or in 1925.

Hamilton.—A combined working force of 29,776 persons was reported by the 203 co-operating employers who had 29,558 on April 1 Manufactures were somewhat quieter, but there was seasonal activity in construction. Employment was in greater volume than in the corresponding month of 1926, despite the fact that the expansion then indicated was rather greater.

NOTE.—Number employed by the reporting firms in January, 1920, is taken as 100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS AND OF DOMINION EMPLOYMENT IN MANUFACTURING

compared with 8,426 in the preceding month. Employment was less active than on May 1, 1926.

Winnipeg.—Construction reported the most noteworthy expansion in Winnipeg; 283 employers in that city added 266 persons to their staffs, bringing them to 27,145 on May 1. The situation was more favourable than on the corresponding date last year, when somewhat greater gains were indicated.

Vancouver.—Manufacturing, transportation and trade registered the most noteworthy in-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	[1]Relative Weight	May 1 1927	April 1 1927	May 1 1926	May 1 1925	May 1 1924	May 1 1923

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

creases in Vancouver, where 231 firms reported an aggregate working force of 25,494 persons, compared with 24,776 on April 1. The index was slightly higher than at the beginning of May a year ago; the trend then was also upward.

Index numbers by cities are given in Table II.

Manufacturing Industries

Employment in manufactures showed an important gain that exceeded the increase noted on the corresponding date last year: 3,792 establishments reported 473,761 workers, compared with 462,662 in the preceding month. The largest advances were those of a seasonal nature in lumber mills, but pronounced expansion also took place in the iron and steel, fish-packing, pulp and paper, rubber, tobacco, and malt liquor, building material, electric current and some other groups. Boot and shoe and electrical appliance works, however, were slacker, and certain automobile plants were not working full time. Employment was in much greater volume than on May 1 in any other year since 1920.

Animal Products—Edible.—Continued and larger increases in employment were noted in fish-packing and other branches of this division, but the improvement was not quite so extensive as on May 1 in the earlier years of the record, when the index number was lower. Statements were tabulated from 196 firms in this group employing 15,916 workers, or 1,286 more than at the beginning of April. The expansion took place in the Maritime Provinces and British Columbia, especially in the former.

Leather and Products.—The trend of employment was seasonally downward in boot and shoe and other leather factories, according to 190 manufacturers with 16,985 employees, as compared with 17,455 in the preceding month. The largest decline took place in Quebec. This reduction involved practically the same number of workers as that noted on May 1, 1926, although it was considerably smaller than on the corresponding date in 1925; in both of those years the index number was lower.

Lumber and Products.—Seasonal activity in lumber mills caused a pronounced advance in the employment afforded in this group, other divisions of which, except match factories, registering curtailment. The increases in sawmills were generally distributed over the country, those in Quebec and Ontario being most noteworthy. This expansion was very much greater than that reported on May 1, 1926, when the index number was four points lower.

Musical Instruments.—Employment in musical instrument works showed a decrease, 102 persons being released by the 39 co-operating manufacturers; they had 3,043 employees on the date under review, when the index number was slightly higher than on May 1 in the last three years. This decrease was mainly recorded in Quebec and Ontario.

Plant Products—Edible.—There was a moderate increase in employment in the vegetable food group, contrasting with a comparatively small loss on May 1, 1926. The index number then, and in earlier years of the record, was not as high as at the beginning of May, 1927. Statements were tabulated from 297 employers whose payrolls aggregated 25,426 persons, as compared with 25,228 at the beginning of April. Starch and glucose, canning and biscuit works afforded rather more employment, but other divisions registered moderate curtailment. Improvement was shown in the Maritime Provinces and Ontario, while elsewhere the movement was retrogressive.

Pulp and Paper Products.—Continued advances were made in the pulp and paper industries, in which employment was in greater volume than in the spring of any other year of the record. Practically all the gains took place in pulp and paper mills, but printing and publishing houses were slightly busier. The working forces of the 463 co-operating establishments aggregated 57,593 employees, as against 56,917 in their last report. The Maritime and Prairie Provinces recorded heightened activity, but the tendency in the other provinces was unfavourable.

Rubber Products.—Further and larger additions to staffs were noted in rubber factories on May 1; losses in personnel had been indicated on the corresponding date in 1926, when the index number, as in the spring of earlier years of the record, was lower than on the date under review. Returns were tabulated from 32 manufacturers employing 13,880 workers, or 303 more than at the commencement of April. Practically all this increase was made in Ontario.

Textile Products.—There was slight improvement in this group at the beginning of May, according to statistics from 510 manufacturers having 76,002 persons on their payrolls, as compared with 75,882 on April 1. Headwear and miscellaneous textile factories registered improvement, while garment, personal furnishing and woollen mills were slacker. The bulk of the expansion was in Quebec, curtailment being indicated on the whole in Ontario.

Tobacco, Distilled and Malt Liquors.—Data were received from 107 plants in this group employing 12,314 persons, or 334 more than in the preceding month. This gain, which was smaller than that recorded on May 1, 1926, took place mainly in Quebec. Employment was at practically the same level as on the corresponding date of 1926, but was considerably higher than on May 1 of earlier years of the record.

Chemicals and Allied Products.—The production of chemical and allied products showed a moderate increase in Quebec and Ontario, according to information from 111 manufacturers whose staffs included 6,763 workers, as against 6,630 in the preceding month. The index number was rather higher than on May 1, 1926, when smaller gains were indicated.

Clay, Glass and Stone Products.—Building material factories in all provinces except Quebec indicated seasonal improvement; the general gain, however, was not as marked as at the beginning of May a year ago, when the index number was one point higher. The 110 co-operating firms reported 9,537 employees, as against 9,152 in the preceding month.

Electric Current.—Further and more pronounced additions to staffs were recorded on May 1 in electric current plants, the expansion greatly exceeding that noted on the same date last year. The index number then was considerably lower. Statements were received from 86 companies employing 12,358 workers, an increase of 535 over their April 1 payrolls.

Electrical Apparatus.—The trend of employment in this group continued to be unfavourable, 213 persons being released from the working forces of the 37 co-operating establishments; they reported 10,248 employees. This contraction was largely confined to Ontario. Practically no change in the situation was registered on May 1, 1926, when the index number, as well as on that date in previous years of the record, was much lower.

Iron and Steel Products.—Rolling mills, automobile, railway car, heating appliance and sheet metal works reported increased employment, while the agricultural implement and a few other branches of the iron and steel group released employees. Some large automobile factories were, however, working on short time. Statements were tabulated from 639 manufacturers, with 133,328 operatives, as compared with 131,027 in the preceding month. Although the improvement indicated on the corresponding date last year was more pronounced, the index number then was slightly lower. The bulk of the gain was in Ontario.

Non-ferrous Metal Products.—The production of lead, tin, zinc, copper and aluminum goods showed an increase, while smelters and refineries were somewhat slacker. A combined working force of 16,482 persons was reported by the 107 co-operating firms, who had 16,290 at the beginning of April. There were small advances in all provinces. Additions to staffs of approximately the same size were reported in this group on May 1, 1926, but the index number then was many points lower than at the time of writing.

Mineral Products.—Continued, but rather smaller gains were made in the mineral products group, but the increase was not so pronounced as on May 1, 1926; when the index number was somewhat higher. Reports were received from 75 manufacturers, whose payrolls included 9,842 workers, as compared with 9,683 in the preceding month. General improvement was shown in this group throughout the country.

Logging

In spite of large increases in Quebec and the Maritime Provinces on account of river drives, there was, on the whole, a decline in logging, according to 222 firms employing 19,250 men, or 731 less than in April. More extensive losses were registered at the beginning of May, 1926, when the index was lower.

Mining

Coal.—Employment in coal mining showed a reduction in employment that rather exceeded the loss reported on the corresponding month last year. The index number then, however, was over nine points lower. Data were received from 88 operators employing 26,139 workers, as compared with 26,658 at the beginning of April. The decrease took place in the western coal fields.

Metallic Ores.—Continued improvement was recorded in metallic ore mining, chiefly in British Columbia; smaller increases were noted on May 1 a year ago, when the index number was many points lower. An aggregate working force of 11,902 persons was employed by the 50 co-operating firms, who had 11,587 in their last report.

Non-Metallic Minerals (Other than Coal).—Employment in this group, so far during 1927, has shown uninterrupted gains. Sixty-four employers enlarged their payrolls by 371 workers to 6,307 at the beginning of May. Quarries, generally, and asbestos mines in Quebec, showed heightened activity. Somewhat larger additions to staffs were reported on the corresponding date last year, but the index number then was several points lower.

Communication

Further increases were noted in telegraph and telephone operations, 389 persons having been added to the forces of the 187 co-operating companies, which had 25,055 in their employ. The situation was considerably more favourable than on the same date in any other year of the record.

Transportation

Street Railways and Cartage.—Continued expansion was shown in local transportation at the beginning of May, 1,008 workers having been added to the forces of the 114 firms from whom information was received, who employed 20,269 at the beginning of May. This increase greatly exceeded that recorded on the corresponding date in 1926, when the index number was several points lower. Quebec and Ontario registered most of the advance.

Steam Railways.—Steam railway operation afforded more employment in Ontario and the Prairie Provinces, while in the Maritime Provinces and Quebec, curtailment was shown. Statements were received from 100 employers in this division, whose payrolls were augmented by 1,002 persons to 76,234 at the beginning of May. This increase was much larger than that reported on May 1 in the preceding year, and the index number then was several points lower.

Shipping and Stevedoring.—A combined staff of 14,106 men, as compared with 11,062 in the preceding month, was reported by the 54 co-operating firms in the water transportation group. This was an increase of many more workers than that indicated on the same date in 1926. The volume of employment then was smaller than on May 1, 1927. An important share of the gain was in Quebec and Ontario.

Construction and Maintenance

Building.—Seasonal operations in building construction continued to expand the improvement being more extensive than in the spring of any other year of the record; the index numbers on May 1 of the years, 1920-1926, were much lower than on the date under review. The working force of the 397 co-operating contractors aggregated 33,338 persons, as compared with 28,735 at the beginning of April. The tendency was favourable in all provinces except British Columbia, but the largest additions to staffs were in Ontario.

Highway.—Employment on roads and highways showed considerable gains, 3,935 men being added to the working forces of the 114 employers making returns, who had 8,018 on May 1. All provinces registered increased activity, the gains in Quebec and Ontario being most pronounced. Approximately the same number of workers were added to payrolls on the corresponding date in 1926, but the number then employed was smaller.

Railway.—Thirty-five companies and divisional superintendents in this group employed 39,850 workers, as against 29,193 in the last report. All provinces shared in the upward movement, which, however, was most marked in the Prairie Provinces. Very much smaller expansion was noted at the beginning of May a year ago, when the index number stood at 109.1, as compared with 126.6 on the date under review. The latter was higher than on May 1 in any other year of the record, which was begun in 1920.

Services

Hotels, laundries and other divisions of the service group recorded heightened activity, according to statements from 171 establishments employing 14,934 persons, as against 14,501 in their last report. The situation was decidedly better than on May 1 of 1926, or of earlier years of the record, while the increases were the largest indicated on that date in the years since 1920.

Trade

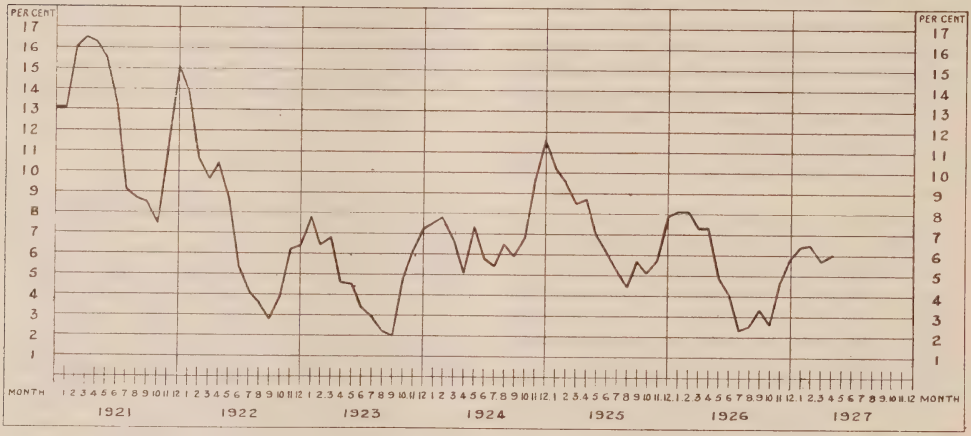
Continued and more extensive additions to personnel were shown in trade, in which 560 establishments enlarged their forces by 1,098 employees to 61,687 on the date under review. The index was several points higher than at the commencement of May last year, and considerably higher than in any month in the years 1921 to 1925. Improvement was noted in both retail and wholesale trade, the largest gain being in the former in Ontario.

Tables I, II, III, give index numbers of employment by economic areas, leading cities and industries respectively. The columns headed "Relative Weight" show the proportion that the number of employees reporting in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1927.

The Nipigon Corporation, Limited, which at present operates a small mill at Nipigon, has secured a suitable site in Port Arthur upon which to construct a large pulp and paper mill. The site adjoins the Thunder Bay Pulp and Paper mills on the north water front. The output objective is 400 tons of paper per day.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF APRIL, 1927

THE term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.



The situation existing among local trade unions at the close of April, as was manifest by the returns received from 1,549 labour organizations with a membership of 164,948 persons, was slightly less favourable than that indicated at the end of the previous month, 6.0 per cent of the members being idle on April 30 as compared with an unemployment percentage of 5.7 in March. The trend of employment, however, was better than in April last year when 7.3 per cent of idleness was registered. The province of Quebec with considerable inactivity reported among its garment trades during April had the greatest tendency in swaying the unemployment percentage for Canada adversely as compared with March. In a minor degree Alberta contributed to the unemployment as conditions in the coal mining areas were not so good as in March. Slight contractions were also reported in New Brunswick, Manitoba and Saskatchewan. Of the gains, that of nearly 8 per cent in Nova Scotia was the most outstanding, due to greater activity in the coal mines, and the improvement in the building trades in Ontario caused the percentage out of work in that province to drop. In comparison with the returns for April last year the Nova Scotia situation improved greatly, due again to gains in employment in the coal mines, and in Quebec, Ontario and British Columbia there were slight increases in employment. Of the reductions in the remaining provinces, none were particularly noteworthy.

A separate tabulation is made of the trade union conditions existing in the largest city in each province with the exception of Prince Edward Island. Of these, Montreal reported over 12 per cent of idleness in April, the largest percentage of any of the cities used in this comparison. Winnipeg was next in line with 8 per cent, and Halifax followed, showing 7.3 per cent of inactivity. Regina registered the best situation, only 2.5 per cent of the members being without work.

The accompanying chart shows the trend of unemployment by months from 1921 to date. It will be seen that the curve which showed a downward tendency in March changed its course in April and rose slightly, indicating an increase in unemployment.

The manufacturing industries, with 430 unions, having a combined membership of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS
Quarterly 1916-1921, Monthly 1922-1926

45,540 persons, reported 9.9 per cent of idleness as compared with the 5.2 per cent in March and 9.8 per cent in April last year. The deciding factor in the adverse situation as compared with March was the greater unemployment registered among the garment trades in the Province of Quebec. There were also contributing declines though small in comparison among papermakers, textile, iron and steel, and glass workers. On the other hand, employment for cigar and tobacco, wood and leather workers, printing tradesmen and metal polishers increased.

Returns received from 33 unions of coal miners with 15,384 members indicated 7.5 per cent unemployed as compared with 11.3 per cent in March. In Nova Scotia conditions were much improved, but in Alberta there was considerable slackness, and in British Columbia no miners were reported idle. In comparison with the returns for April last year when 15.2 per cent of the members were out of work, employment conditions in the three provinces concerned were much the same as in the previous comparison, although the changes were somewhat larger. Quarry workers in Nova Scotia were better employed than in either of the months used for comparative purposes.

The building and construction trades continued the seasonal expansion begun in March, the percentage out of work at the end of April standing at 11.9 as compared with 18.7 per cent in March. Reports were tabulated from 166 unions of these tradesmen, having a combined membership of 17,796 persons, 2,111 of whom were without work. Bridge and structural iron workers alone were slacker than in March, while in all other trades the situation showed improvement, the most substantial gains being among bricklayers, masons and plasterers, painters, decorators and paperhangers, and carpenters and joiners. In comparison with the returns for April last year when the percentage idle stood at 12.5, bridge and structural iron workers, granite and stonecutters, painters, decorators and paperhangers, and plumbers and steamfitters were all afforded more work, but employment for bricklayers, masons and plasterers, carpenters and joiners, electrical workers, tile layers, lathers and roofers and hod carriers and building labourers declined.

The transportation industry, with 627 unions having a membership of 56,564 persons, reported a nominal change only during April as compared with the previous month, the percentages of idleness standing at 2.8 and 2.9 respectively. In the navigation division there was a decline of over 4 per cent, and among street and electric railway employees a slight contraction, but among steam railway employees, whose returns constitute 81 per cent of the entire group membership reporting, the improvement more than offset the reductions in the other divisions. In comparison with April last year, when 3.5 per cent of unemployment was reported in the transportation industries, navigation workers were slightly slacker, and steam and street and electric railway employees were all afforded a greater volume of work.

A separate tabulation is made for longshore workers, whose returns included 11 unions with 6,484 members during April, and showed an unemployment percentage of 16.4, as compared with 14.7 per cent in March. The situation for the month under review however was much more favourable than in April last year.

In the public employment group, where returns were received from 127 unions with 12,275 members, the percentage of inactivity was the same as in March, namely .7 per cent. In comparison with the returns for April of last year, there was a nominal change for the

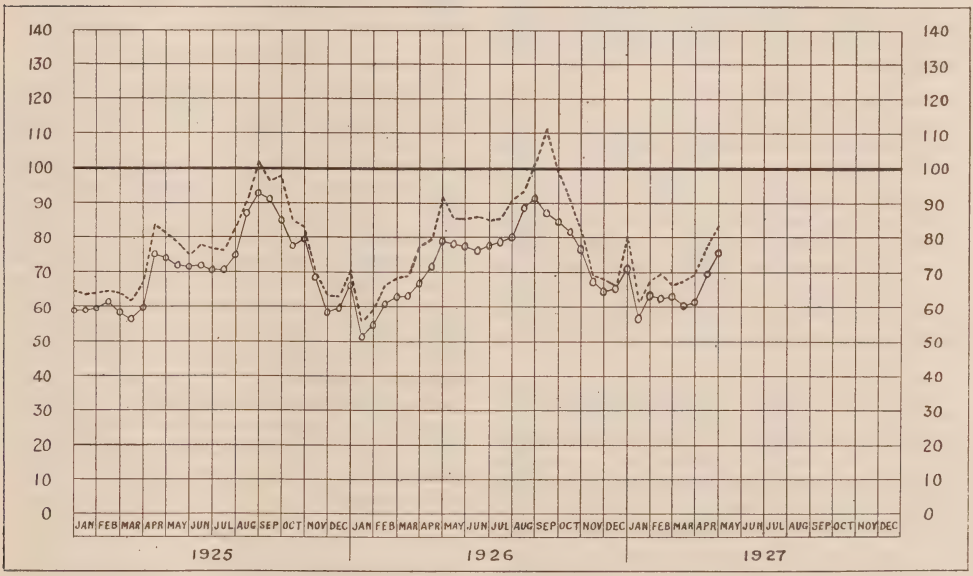
better. Federal workers as in March were reported fully engaged, and the situation among civic employees remained unchanged.

The miscellaneous group of trades, with 101 unions reporting 5,048 members, had 5.5 per cent of idleness, or the same volume of unemployment as in March. Within the various trades, however, there were fluctuations, theatre and stage employees, barbers, steam and operating engineers, and bill posters and billers reporting a slight increase in activity, and hotel and restaurant employees counteracting reductions. In no case, however, was the change pronounced. The situation in the miscellaneous trades as a whole was better than in April last year when 6.2 per cent of the members were out of work.



Fishermen reported a small percentage of idleness as compared with no unemployment in March. Lumber workers and loggers were fully engaged as in March, but in April, 1926, there was 29.8 per cent of idleness.

Table No. 1 on page 663 summarizes the returns by provinces for April in each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and table No. II on page 664 represents the percentages of unemployment registered in the various groups of industries for the same months.

EMPLOYMENT OFFICE REPORTS FOR APRIL, 1927

THE volume of business transacted by the Employment Service of Canada during the month of April, 1927, showed the substantial increase of over 53 per cent in the average daily placements effected during the period, as compared with the preceding month, while improvement in the construction and services groups. Reduced placements in farming were largely responsible for the decline from April, 1926, which was partly offset by gains in the logging industry, other groups showing changes, though in a minor degree.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

a decline of 5 per cent was recorded in the comparison with April last year. Though all groups except logging showed gains over last month, that in farming was the most pronounced, followed in a lesser degree by marked

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Ser-

vice throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications rose steadily throughout the month, but did not reach the level attained at the close of April, 1926. The ratio of vacancies to each 100 applications was 77.5 and 83.4 during the first and second half of April, in contrast with ratios of 79.S and 91.6 during the same periods in 1926. The ratios of placements to each 100 applications during the periods under review were 69.6 and 75.5 as compared with 71.8 and with 79.0 during the coresponding month last year.

A summary of the reports from the offices showed that the average number of applications reported daily during the first half of April, 1927, was 1,495, as compared with 1,371 daily during the preceding period, and with 1,799 daily in the corresponding period in 1926. Applications for work during the latter half of the month registered 1,929 daily, in contrast with 1,711 daily during the latter half of April a year ago.

Employers notified the Service of a daily average of 1,159 vacancies during the first half, and 1,609 during the latter half of the month under review, as compared with a daily average of 1,437 and 1,567 vacancies during the month of April, 1926. Vacancies offered to the Service during the latter half of March, 1927, averaged 952 daily.

The Service effected a daily average of 1,041 placements during the first half of April, 1927, of which 685 were in regular employment and 356 in work of one week's duration or less, as compared with a total average placement during the preceding period of 841 daily, and with 1,292 daily during the first half of April, 1926. During the latter half of the month under review placements averaged 1,456 daily (1,022 regular and 434 casual), as compared with an average of 1,351 daily during the corresponding period a year ago.

During the month of April, 1927, the offices of the Service referred 31,254 persons to vacancies, and effected a total of 29,949 placements. Of these the placements in regular employment numbered 20,484, of which 16,681 were of men and 3,803 were of women, while the placements in casual work totalled 9,465. The number of vacancies reported by employers numbered 22,238 for men and 10,961 for women, a total of 33,199, while the applications for work totalled 41,077, of which 30,039 were from men and 11,038 from women.

The following table gives the placements to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756

NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during April called for nearly 29 per cent more workers than in the preceding month, and for nearly 10 per cent more than in the corresponding month last year. There was an increase of over 17 per cent in placements when compared with March, and of over 21 per cent in comparison with April, 1926. Increased placements of household workers were mainly responsible for the gains over April last year, as the changes in other groups were small. Industrial groups in which most of the placements were effected during the month were: manufacturing, 75; trade, 73; and services, 475, of which 336 were of household workers. Placements in regular employment numbered 111 of men and 80 of women.

NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at employment offices in New Brunswick during April, were over 56 per cent better than in the preceding month, and over 9 per cent in excess of April 1926. There was a gain of more than 34 per cent in placements over March, but a decline of nearly 6 per cent when compared with April last year. Construction and maintenance was the only group in which more placements were made during April this year than in April, 1926, and these gains were more than offset by minor declines in all other groups. Placements in construction and maintenance numbered 71, and in services 520, of which 380 were of household workers. During the month 97 men and 54 women were placed in regular employment.

QUEBEC

There was an increase of over 55 per cent in the number of positions offered through offices in the Province of Quebec during April when compared with the preceding month, and a gain of over 37 per cent in comparison with the corresponding month last year. Placements were over 50 per cent higher than in March, and over 51 per cent above April,

*195 Placements effected by offices since closed.

1926. Logging showed the most noteworthy gain over the corresponding month last year, although there was improvement in all other groups except manufacturing, transportation and trade. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 113; logging, 661; farming, 57; construction and maintenance, 867; and services, 554, of which 340 were of household workers. There was 1,799 men and 480 women placed in regular employment during the month.

ONTARIO

Employment opportunities, as indicated by orders listed at offices in Ontario during April, were over 19 per cent better than in the preceding month and over 7 per cent in excess of the corresponding month in 1926. There was a gain of nearly 23 per cent in placements over March, and over 7 per cent over April last year. Logging, transportation and services showed the most improvement over April last year, allthough there was also an increase in placements in trade. All other groups showed small change or minor declines. Placements by industrial groups included: manufacturing, 1,544; logging, 825; farming, 998; transportation, 486; construction and maintenance, 2,248; trade, 367; and services, 4,290, of which 2,588 were of household workers. Regular employment was found for 5,455 men and 1,263 women during the month.

MANITOBA

During the month of April positions offered through employment offices in Manitoba were nearly 33 per cent higher than in March, but were almost 4 per cent less than in April, 1926. There was a gain of 29 per cent in placements when compared with the preceding month, but a decline of over 2 per cent in comparison with April last year. The only group in which more placements were effected during the month under review than in the corresponding month last year was construction and maintenance. There were, however, no declines of importance in any groups. Placements by industrial divisions included: manufacturing, 71; logging, 91; farming, 1,458; construction and maintenance, 299; trade, 166; and services, 2,013, of which 1,632 were of household workers. During the month 1,788 men and 586 women were placed in regular employment.

SASKATCHEWAN

There was an increase of about 49 per cent in the number of positions offered through offices in Saskatchewan during April when compared with the preceding month, but a decline of nearly 34 per cent when compared with the corresponding month last year. Placements were over 61 per cent higher than in March, but nearly 24 per cent lower than in April, 1926. The declines in placements from last year were nearly all in farming and in construction and maintenance, being offset in part by gains in manufacturing and services. The changes in other groups were small. Industrial divisions in which most of the placements were made during the month were: manufacturing, 97; farming, 2,352; construction and maintenance, 281; trade, 82; and services, 996, of which 674 were of household workers. Placements in regular employment numbered 2,597 of men and 579 of women.

ALBERTA

The demand for workers, as indicated by orders listed at offices in Alberta during April, was nearly 97 per cent greater than in the preceding month, but 17 per cent less than in the corresponding month last year. Placements increased over 100 per cent in comparison with March, but declined more than 12 per cent when compared with April, 1926. The most noteworthy change from last year was in farming, where placements declined. Minor reductions were shown in logging, transportation, construction and maintenance and services, while gains were recorded in the manufacturing industries, mining and trade. Most of the placements effected during the month were in the following industrial groups: manufacturing, 280; logging, 89; farming, 2,603; mining, 72; construction and maintenance, 450; trade, 97; and services, 818, of which 585 were of household workers. During the month 3,383 men and 465 women were placed in regular employment.

BRITISH COLUMBIA

During April orders received at employment offices in British Columbia called for over 10 per cent more workers than in the preceding month, but over 33 per cent less than during the corresponding month last year. There was a gain of nearly 14 per cent in placements in comparison with March, but a loss of nearly 34 per cent when compared with April, 1926. All industrial groups except trade participated in the reductions in placements from last year. Placements in manufacturing, logging, farming and construction and maintenance showed considerable decline. Industrial groups in which most of the placements were effected during the month were: manufacturing, 378; logging, 290; farming, 300; transportation, 169; construction and maintenance, 623; trade, 136; and services, 907, of which 538 were of household workers. Regular employment was procured for 1,451 men and 296 women during the month.

Movement of Labour

During April, 1927, the offices of the Employment Service of Canada made 20,484 placements in regular employment, of which 13,513 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,221 were granted the Employment Service reduced transportation rate, 1,778 going to points within the same province as the despatching office, and 443 to other provinces. The reduced transportation rate (which is 2.7 cents per mile, with a minimum fare of $4) is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement in the province of Quebec, where 251 special rate certificates were issued, was entirely toward the logging districts of the Province, Quebec City effecting 244 transfers and Montreal 7 transfers, all of bushmen for employment within their respective zones.

Ontario offices granted certificates to 353 workers, one of whom, a miner, went from Sudbury to the Hull zone and the remainder to various provincial points. Of the latter, 267 were bushmen, and 21 construction labourers, the majority of whom were sent by the Fort William and Port Arthur offices to points within their own zones. From the offices at Toronto one auto mechanic, one steward and one waitress were transferred to North Bay, 3 miners to Timmins and one clerk and one foreman to Port Arthur; from Pembroke 15 saw mill hands went to Sault Ste. Marie, and 3 mill hands, one mine labourer and one general labourer to Cobalt. The movement from Sudbury included one die-maker for the Peterboro zone, one axeman and one mine driller for Cobalt, and one edgerman for the Sudbury zone, while from North Bay 7 railroad construction labourers, 2 miners and one hotel worker travelled to Cobalt, 6 mill construction labourers and one blacksmith to Timmins and one lumber mill worker within the North Bay zone. Kingston received 3 metal polishers, one from each of the St. Catharines, Toronto and Pembroke offices and Pembroke four mill men from Ottawa. The remainder included one foreman, one cook, four prospectors and one machine runner who were despatched by the Cobalt office to points within the Port Arthur zone.

Those who benefited by the reduced transportation rate in Manitoba totalled 624, of whom 412 went to employment within the province, and 212 to outside points. All the transfers were made by the Winnipeg office, 318 farm hands, 23 female farm workers, 2 porters and 9 hotel and household workers going to Brandon, 5 bushmen, 2 farm labourers, 2 mill labourers and one chambermaid to Dauphin, and 31 farm hands, one female domestic, 14 carpenters, 2 bushmen and 2 hotel workers to points in the Winnipeg zone. Of those going to other provinces Estevan received one female hotel worker, Regina one teamster, 18 carpenters, one female hotel worker, one general, and 2 grocery clerks, Moose Jaw one green-house man, Prince Albert 2 cookees, North Bay 9 dam workers and Port Arthur one baker, 3 labourers, 34 bushmen, 2 riggers, one farm hand, 3 sawyers and 12 hotel and household workers. The remaining 120 transfers were farm labourers and farm household workers, 113 going to employment in the agricultural areas of Saskatchewan, and 7 to points in Alberta.

The certificates for special transportation in Saskatchewan numbered 252, of which 243 were for provincial points and 9 for other provinces. The Regina office shipped one bushman to Prince Albert, one painter to Moose Jaw and 7 hotel and household workers to employment in the Regina, Estevan, Saskatoon and Moose Jaw zones. From Saskatoon one saw mill hand and one waitress went to Prince Albert, and one porter and one labourer within the Saskatoon zone, while from Prince Albert one cook was sent to Moose Jaw, and 8 saw mill labourers and 5 bushmen within its own zone. From Moose Jaw 6 teamsters, one hotel worker and one cook travelled to employment in the Moose Jaw zone. Of the remaining 208 transfers, 198 were of farm labourers and 10 of farm household workers, the majority going to employment around Saskatoon and Moose Jaw. Of those despatched outside the Province Dauphin received 8 labourers and Sault Ste. Marie one cook, all from Regina.

Of the 447 certificates which were issued in Alberta 378 were for provincial points and 69 for other provinces. Within the Province the Edmonton office issued transportation to one butcher, one canterman, one engineer, 5 carpenters, 7 miners, 8 labourers, one bookkeeper, one machinist, one fireman, one mason, 6 mine labourers, 9 mill hands, 17 bushmen, one blacksmith, 10 teamsters, one truck driver, 161 farm hands and 11 hotel and household workers, all of whom were going to employment within the Edmonton zone. Edmonton also transferred 6 farm hands, 2 carpenters, 5 labourers and one cookee to Calgary, 4 farm labourers to Lethbridge, one porter and one farm labourer to Drumheller and 1 iron moulder to Medicine Hat. From Calgary one

mechanic went to Edmonton and 109 farm hands and 4 female farm workers to employment principally around Drumheller and Calgary. The interprovincial transfers were all for farm labourers 62 of whom were despatched by Edmonton to Saskatchewan points, particularly around Saskatoon and the remaining 7 by the Calgary office also within the Province of Saskatchewan.

The offices in British Columbia granted 294 certificates for special transportation 142 provincial and 152 interprovincial. Of the former the Vancouver office despatched 3 painters, 6 farm labourers, one setter, 3 pole makers, 3 muckers, 2 miners, 3 cooks, one kitchen worker, 2 engineers, one butcher, one steel sharpener, one millwright and 21 bushmen and 8 teamsters to Kamloops; 8 carpenters, 3 mill wrights, one engineer, one cook, one fireman, 4 farm labourers, 2 station men, 5 miners, one mucker and one waitress to Penticton; 5 miners, one engineer and one fireman to Revelstoke; one miner, one engineer and one planer man to Prince George; 5 carpenters to Nelson; and 7 miners, 4 muckers, 4 labourers, 2 bull cooks, 2 carpenters, 2 housekeepers, one waitress, one blacksmith, and one flunkey to points within the Vancouver zone. From Kamloops 8 bushmen went to points within the zone, and one labourer to Prince George, while from Nelson one blacksmith travelled to Cranbrook, one engineer to Prince George and one farm labourer within the Nelson zone. Of the remainder one stationary engineer, one miner and one bricklayer were transferred from Prince Rupert, and 5 farm labourers from Penticton to points within their respective zones. The interprovincial movement was toward the farm districts of the Prairie provinces, Alberta receiving 73 farm workers, Saskatoon 59, and Manitoba 6. Transportation certificates were issued also to 14 cooks, 7 of whom went to Alberta, 5 to Saskatchewan and 2 to Manitoba, practically all of whom were for work in farm households.

Of the 2,221 persons who benefited by the Employment Service reduced transportation rate 1,246 travelled by the Canadian National Railways, 939 by the Canadian Pacific Railway, 19 by the Temiskaming and Northern Ontario Railway, 12 by the Pacific Great Eastern Railway, and 5 by the Kettle Valley Railway.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

EDMONTON, ALBERTA.—MASTER SHEET METAL ASSOCIATION AND INTERNATIONAL SHEET METAL WORKERS' ASSOCIATION LOCAL NO. 371.

Agreement effective from May 1, 1927, until April 30, 1928, and, if 30 days' notice of change is not given, until April 30, 1929. This agreement was in settlement of a strike which lasted from May 2 until May 25, 1927.

Minimum wages per hour for sheet metal workers, May 1, 1927, to April 30, 1928, $1. Improvers, three-quarters of journeymen's rate. Wages weekly in cash.

Improvers must be apprentices of three years' standing.

Apprentices' qualifications will be considered by an examining board. Apprentices must be registered and must not work without a journeyman, improver or employer. Disputes over apprentices must be referred to a joint committee. Improvers will be examined by a joint committee before becoming journeymen. If no union journeymen are available for employment when required, additional improvers may be employed. One apprentice to a shop and one for every three journeymen.

Hours, per week, forty-four, except during December to March inclusive, when shorter hours may prevail at option of employer.

The union shall appoint a shop steward for each shop. Disputes shall be referred to the manager and the shop steward and then if necessary to the joint executive committee.

Overtime, until midnight, time and one-half. Thereafter and Sundays and holidays, double time.

Transportation and board to be paid in case of employees working outside the city limits. Allowance to be made for two hours' travelling time. Overtime after 10 hours.

Members are to be disciplined if not working in a legitimate shop. This clause not to apply to government work.

Manufacturing: Pulp, Paper and Products

SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS, ONTARIO.—SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND LOCAL BRANCHES OF VARIOUS INTERNATIONAL UNIONS.

The agreements in effect from May 1, 1926, to May 1, 1927, as summarized in the LABOUR GAZETTE, May, 1926, page 500, have been automatically renewed to May 1, 1928, as provided for in the agreements.

THOROLD, ONTARIO.—THE ONTARIO PAPER COMPANY, LIMITED, AND LOCAL BRANCHES OF VARIOUS INTERNATIONAL UNIONS.

Agreement originally effective May 1, 1923, and summarized in the LABOUR GAZETTE, September, 1923, and subsequently extended, will be effective until May 1, 1928, with no material change.

Construction: Building and Structures

OTTAWA, ONT.—THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, OTTAWA BRANCH, MASONS AND GENERAL CONTRACTORS' SECTION, AND BRICKLAYERS' UNION NO. 7 OF THE INTERNATIONAL UNION OF BRICKLAYERS, MASONS AND PLASTERERS OF AMERICA.

The agreement in effect from May 1, 1925, until April 30, 1926, summarized in the LABOUR GAZETTE for July, 1925, was extended as provided, with wages per hour for bricklayers $1.10 until July 31, 1927. From August 1, 1927, until April 30, 1929, wages per hour for bricklayers will be $1.20, the remaining clauses of the agreement being unchanged.

OTTAWA, ONT.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Agreement to be in effect from May 1, 1927, until April 30, 1929, and thereafter from year to year unless four months' notice of change is given.

Hours, eight per day, four on Saturdays. If agreed upon, one half an hour may be taken for lunch, quitting time being 4.30 p.m.

Overtime until 10 p.m., time and one-half. Thereafter, double time, except in shift work, where regular rate shall be paid.

Minimum wages, May 1, to July 1, 1927, 75 cents per hour; from August 1, 1927, to April 30, 1929, 85 cents.

Parties agree to establish an industrial council of five members from each party, with an independent chairman, to adjust disputes arising through interpretation of or failure to carry out the agreement; decision to be binding.

Holidays: New Year's Day, Christmas Day, Dominion Day. No work on Labour Day except to save life or property.

Accredited representatives of the union are to be allowed access to jobs to confer with the shop steward.

Members discharged shall be paid waiting time if waiting for pay after one hour on the job.

Parties are to adopt and enforce the apprenticeship plan of the Construction Apprenticeship Council of Ontario.

Only union carpenters are to be employed if available.

SASKATOON, SASK.—MASTER PAINTERS' ASSOCIATION AND BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, NO. 1173.

Agreement effective from April 15, 1927, and from year to year, unless notice of change is given by January 2.

Hours of work: nine per day, five on Saturday.

Holidays: New Year's Day, Peace Day, Dominion Day, Christmas Day; no work on Labour Day.

Transportation to be given to jobs outside city limits, from city limit to job and return, time to count from leaving city limits at 7 a.m. until arrival there again at 5 p.m., less one hour for lunch. Board and lodging over $7 per week to be paid, also travelling expenses once a month, with a sleeper if travelling at night.

Overtime until 8 p.m., time and one-quarter; from 8 p.m. until midnight, and from noon on Saturday, time and one-half; after midnight, double time.

One apprentice to every five men, or portion thereof. No apprentice to work alone. Apprentices must be not over 17 years of age when engaged.

No local members may work for anyone except recognized master painters, carrying workmen's compensation insurance.

In case of grievance or violation of agreement, same shall be submitted to a joint committee of three from each side. There shall be no cessation of work until the highest representatives of each side have failed to come to an understanding, when an independent chairman will be called in.

Minimum wage, per hour, 75 cents.

Representative of the union will assist in providing necessary qualified men.

Smoking prohibited on all jobs.

DISTRICT NO. 7—INCLUDING ONTARIO EAST OF FORT WILLIAM, QUEBEC, THE MARITIME PROVINCES AND NEWFOUNDLAND. TRADE RULES OF STEAM SHOVEL LOCAL NO. 47, TORONTO, AND SUB-LOCALS OF DISTRICT NO. 7.

Effective May 1, 1927.

Minimum monthly wage: engineers, $250; cranesmen, $200; firemen and oilers, $150.

Firemen to receive one hour for raising steam, and a half-hour at lunch time.

Calendar working days, or nights, to constitute a month, and eight hours to constitute a day's work.

Overtime, time and one-half. Moving machine, or digging on Sundays or holidays, double time.

Holidays to be observed: New Year's, Good Friday, Victoria Day, Dominion Day, Thanksgiving Day, Christmas Day.

Transportation to job and return furnished by employers.

This scale does not conflict with higher local wage agreements.

Service: Public Administration

CALGARY, ALBERTA.—CORPORATION OF THE CITY OF CALGARY AND THE CALGARY FEDERATION OF CIVIC EMPLOYEES AND CERTAIN OF ITS AFFILIATED UNIONS.

The agreements effective as from February 1, 1925, have been amended in the case of five of the affiliated unions, as given below. In the case of the remaining unions, the agreements as summarized in the LABOUR GAZETTE for April, 1925, p. 411, are still in effect.

The preamble to the agreements is unchanged, with hours of labour 8 per day and 44 per week, except when otherwise practised.

Agreements effective March 1, 1927 until December 31, 1927. Sixty days' notice of intention to cancel may be given; otherwise, agreement shall remain in effect.

Agreement with the International Brotherhood of Electrical Workers, Local No. 348.—

Wages: per day, journeymen cable splicer, $7.80; journeymen in other departments, $7.15; apprentices, $3 to $6; journeymen in charge of rig of two or more journeymen, $7.65; groundmen, $5.15; arc trimmers, $5.90. Station and operating department, and meter readers, paid by the month. Track welders (temporary) and motor and controller men, 77 cents per hour.

Hours of work, eight, with four on Saturday. An agreement to shift hours shall be made for not less than fourteen calendar days, or shift hours shall be paid at the overtime rate. There shall be 16 consecutive hours rest between shifts. Where only one or two shifts are worked, any eight consecutive hours shall constitute a day's work. All employees shall receive at least one day off duty in seven.

Overtime: first hour, time and one-quarter; next three hours, time and one-half; thereafter, double time. Sundays and holidays, after 10 p.m., or emergency work (not less than two hours for any one call) double time. Except for men working their regular shift, all time worked on Sundays and Dominion holidays shall be paid double time; Saturday afternoons, time and one-half; after 5 p.m., double time.

Apprentices shall serve four years; one apprentice to three journeymen.

Agreement with the Amalgamated Association of Street and Electric Railway Employees of America, No. 583.—

Wages, per hour, motormen and conductors, 1st six months, 55½ cents; 2nd six months, 58 cents; thereafter, 63 cents. Motor conductors, same periods, 58 cents, 63 cents and 68 cents. Shop and barnmen, per hour, foreman carpenter, 95 cents; carpenters, 85 cents; machinist, air brake and wheel lathe operators, 80 cents; painters, 75 cents; cleaners, washers and yardmen, 52½ cents; truck and car repairers, 58 cents, 63 cents and 68 cents. Leading hand, 5 cents extra; foreman, 10 cents extra. Track maintenance, per hour, switch repairmen, 60 cents; trackmen, 57½ cents; greasers and switch cleaners, 52½ cents. Office staff all paid by the month.

One hour extra allowed for time worked on Sundays. Legal holidays, time and one-quarter. Work on regular day off, double time. Motor conductors training students, 5 cents extra per hour.

Working conditions: Same as in previous agreement.

Agreement with Calgary Civic Employees' Association.—

Wages: Parks—Caretakers, per month, from $108.80 (and house) to $142.10; per hour, three specialists, 65 cents; gardeners (average) 60 cents; permanent labour, 52½ cents. Paving department, per hour, concrete finishers, 70 cents; permanent labour, 52½ cents. Power department, per hour, fitters, 72½ cents; fitter's helper, 60 cents; coal trimmers and permanent labour, 52½ cents. Public works: specialists (average rate) 75 cents; sub-foreman, 60 cents; permanent general labour, 52½ cents; street cleaners (1st class), 47½ cents; others, 45 cents. Sewer maintenance: service-men, 60 cents; others, average rate, 57½ cents. Waterworks department: hydrant foreman, 65 cents; maintenance diggers, 55 cents; permanent labour, 52½ cents; others, 60 cents. All departments: semi-permanent labour, 52½ cents per hour. This agreement does not cover labour employed for relief purposes, during periods of unemployment, or casual labour.

Hours, forty-eight per week when two or more shifts are in operation; one month's work shall consist of twenty-five and one-half days for revolving shifts.

Agreement of the International Union of Steam and Operating Engineers Local No. 838.—

Wages, per hour, engineers, per month, $140 and $180; head fireman (with 3rd class engineer's papers), $135; firemen, $128; per hour—boiler washer, 70 cents; boiler washer's helper, 60 cents.

Temporary steam engineers, on construction and maintenance, during 1927, engineers in charge of and operating derricks, cranes, orange peels, clam shells, cable ways, dragline, pile drivers and hoists, $1 per hour; engineers in charge of steam rollers, steam tractors, steam concrete mixers, and stone crushers operated by steam, 87½ cents per hour; engineers in charge of portable boilers and steam pumps, 80 cents per hour; firemen, 67½ cents.

Agreement with the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America, Local No. 528.—

Wages, per hour, temsters, truck drivers, 59 cents; truck helpers, 55½ cents, garagemen, per month, foreman mechanic, $164; mechanic, $144; night man, $114.

Overtime, work on Sundays and holidays, except for men on regular shift, double time. No reduction of pay or loss of time through inclement weather. Teams and trucks shall leave the stable or garage at 8 a.m. and remain on the job until 5 p.m., with one hour off for lunch, leaving at noon on Saturday. Necessary care to be given to horses both morning and evening.

MEDICINE HAT, ALBERTA.—CITY COUNCIL OF MEDICINE HAT AND CIVIC EMPLOYEES' FEDERAL LABOUR UNION, No. 46.

Agreement to be in effect from January 1, 1927, until December 31, 1927, and thereafter unless terminated by thirty days' notice from either party.

The city council is to appoint a committee, upon proper notice being given, to receive a

grievance committee from the union. No discrimination against any employees for connection with a trade union. Heads of departments are not to use their positions to solicit donations from employees. Public holidays shall mean New Year's Day, Good Friday, Dominion Day, May 24, Labour Day, Thanksgiving Day, Christmas Day and others not including Easter Monday, and all civic holidays, men to receive pay for same except when employed by hour or day.

After 12 months' service, up to one month's wage shall be paid in case of sickness. Members may have leave of absence without pay to attend conventions.

Agreement only applies to employees at present employed by the city or those who may fill positions rendered vacant during the year on the permanent staff. Senior men to be given preference for promotion, if efficient. Employees out of town on city business shall be allowed reasonable expense.

Hours for outside labour 8 per day in Winter and 8½ per day in Summer; 4½ on Saturdays.

After first year, outside men (except when employed by the day) may have 14 days holidays. Overtime, men employed by hour or day, time and one-half. Monthly men working Saturday afternoons in summer will be allowed time off where convenient.

Former employees who are returned soldiers will be given preference of re-employment if efficient.

In case of any proposed change in hours or conditions during the year, council shall confer with a committee of the union.

City police department: Hours, eight per day, six days per week; clothing and equipment to be supplied. Holidays, after one year's service, constables, fourteen days, sergeants and detectives, eighteen days. After one year's service, wages up to one month shall be paid in case of sickness. In case of sickness or injury as result of employment, all ranks shall be granted pay less compensation not exceeding sixty days.

Detective to be paid $50 on April 1 and $50 on October 1 in lieu of clothing and equipment supplied by the city to other members of the force. Pound-keeper to be supplied with clothing.

Wages per month, constables, $107, $115 and $125; sergeants and detective, $140; clerk and desk officer, $10 per month over his grade as constable.

Public works and engineer's department.—Hours, 8 per day, with the exception of teamsters who shall work ten hours from April 1 to September 30 (nine on Saturdays with pay for ten), and nine from October 1 to March, 31.

Wages, per month—pipefitter, $125; pipe layer, $115; street cleaners, $75. Per hour—labourers, first year, 40 cents; thereafter, 50 cents; teamsters, first year, 45 cents; thereafter 50 cents.

Sanitary department.—After one year, two weeks' leave of absence with pay per year. No employees on leaving the service or on being discharged shall be entitled to two weeks' wages in lieu of holidays. Wages—caretaker, isolation hospital, $90 per month in Summer; $80 in Winter.

Gas department.—Hours, eight per day. Wages per month—pipe fitters and lamp repairers, $115; labourers, same as public works department.

Parks department.—Foreman, $125 per month; market cleaner, $75 per month. Labourers, same as public works department. Hours, eight per day.

City treasurer's department.—Hours, from 8.30 a.m. to 5.30 p.m., 1½ hours for lunch, five days per week. Saturday 8.30 a.m. to 12 noon. All wages paid by the month. After one year's service, two weeks' leave of absence per year with pay. No employee on leaving the service or on being discharged shall be entitled to two weeks' wages in lieu of holidays.

Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from April 22, 1927 until December 31, 1927.

The companies agree: to put up a bond of $2,000 as guarantee of due performance of agreement; that working hours shall be 7 a.m. until noon and 1 p.m. to 6 p.m. at rate of 65 cents per hour; from 7 p.m. until 11 p.m. at 75 cents per hour; and from midnight until 5 a.m. at 97½ cents per hour; Sundays, St. Jean Baptiste Day and Dominion Day, double time. Work during meal hours and thereafter until discharged, double time. For certain cargoes, and for grain trimming and bagging and for work performed in open 'tween deck where grain is running in a hatch connected with said open deck, rates shall be 80 cents, 90 cents and $1.20; running of grain in pipes to be stopped when men go into hold to work.

Men ordered out to work at night must be ordered out for 7 p.m. and be paid until discharged or set to work, with a minimum of one hour's pay.

The longshoremen agree: to put up a bond of $2,000 as a guarantee for due performance of the agreement; to supply necessary men to perform the work; to handle mail and baggage at all times except Labour Day at prevailing rates of wages. Each longshoreman will sign a personal contract.

The bonds deposited will be applied in payments of judgments or orders of any court in Quebec in favour of the other party.

The union will have the right to appoint a representative on the wharves.

MONTREAL, QUEBEC.—VARIOUS STEAMSHIP LINES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

Agreement to be in effect until December 31, 1927.

The companies agree to put up a bond of $500 as guarantee for the due performance of this agreement. Working hours to be from 7 a.m. until noon and from 1 p.m. to 6 p.m. at 65 cents per hour for day work; from 7 p.m. until 11 p.m. at rate of 75 cents and from midnight until 5 a.m. at rate of 97½ cents.

Double time for Sundays, St. Jean Baptiste Day and Dominion Day. Double time for work during meal hour and thereafter until discharged. Men ordered to work at night must be ordered out for 7 p.m. and paid until discharged. If not required they shall receive a minimum of one hour's pay. Running of grain in pipes to be stopped when men go into hold to work.

In holds where bulk sulphur has been stowed and where old wood is being used, rate shall be 80 cents for day work; 90 cents for night work between 7 p.m. and 11 p.m. and $1.20 for night work between midnight and 5 a.m. Where new wood is being used to refit the hold rates shall be 65 cents, 75 cents and 97½ cents. Night meals are to be taken between 11 p.m. and midnight, ship supplying good meals or paying the cost thereof.

The shipliners agree to put up a bond of $500 as guarantee for due performance of this agreement; to supply necessary men to perform the work of shipliners.

Bonds will be applied in payment of judgments or orders of any court in Quebec in favour of the other party. On expiration of agreement, bonds will be cancelled and returned, less amount paid hereunder.

BUILDING PERMITS ISSUED IN CANADA IN APRIL, 1927

THE Dominion Bureau of Statistics tabulated returns during April from 63 cities which granted building permits valued at $18,512,196, as compared with $11,646,227 in the preceding month and $19,044,499 in the corresponding month last year. There was, therefore, an increase of $6,865,969 or 59.0 per cent in the first comparison, but a decrease of $532,303 or 2.8 per cent in the second. The granting of a permit for a large store in Winnipeg during April, 1926, caused the total to be very high in that month. However, the aggregate for the elapsed months of this year —$43,366,274—exceeded that for any other since the record was begun in 1920, while building cost continued to be lower than in any of the last eight years.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,700 permits for dwellings valued at nearly $8,200,000, and for some 3,800 other buildings estimated to cost over $8,000,000. In March, authority was given for the erection of some 1,300 dwellings and 2,500 other buildings, valued at approximately $5,400,000 and $5,600,000, respectively.

Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta recorded increases in the value of the building permits issued during April as compared with March, Quebec showing the greatest gain of $3,210,823 or 145.1 per cent. New Brunswick and British Columbia registered declines of 0.5 per cent and 19.6 per cent, respectively.

As compared with April, 1926, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and Alberta reported increases in the value of the building authorized. Quebec again indicated the most pronounced advance, of $2,149,585 or 65.7 per cent. Of the remaining province, Manitoba recorded the greatest loss, of $4,050,557 or 76.4 per cent, due to the granting of a permit in April last year for an unusually large building in Winnipeg.

Of the larger cities, Montreal registered an increase in the building authorized during April as compared with the preceding month and with April, 1926; in Winnipeg there was a gain in the first comparison and a loss in the second, while Toronto and Vancouver showed reductions in both comparisons. Of the smaller centres, Halifax, Fredericton, Quebec, Shawinigan Falls, Three Rivers, Chatham, Fort William, Galt, Guelph, London, Niagara Falls, Oshawa, Ottawa, Owen Sound, Peterborough, Stratford, Sarnia, the townships of York, Ford, Sandwich, St. Boniface, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, Lethbridge, Nanaimo, New Westminster and North Vancouver reported increased in the value of the permits issued as compared with March, 1927, and April, 1926.

Cumulative Record for the First Four Months, 1927.—The following table gives the value of the building authorized by 63 cities during April and in the first four months of each year since 1920. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given (1913=100).

Year	Value of Permits issued		Average indexes of wholesale prices of building materials in first four months
	In April	In First four months	
1927	$18,512,196	$43,366,274	147·2
1926	19,044,499	41,538,073	152·0
1925	15,482,383	35,463,398	154·0
1924	13,689,101	31,737,100	166·5
1923	19,530,851	39,008,970	165·3
1922	15,833,688	34,513,861	160·7
1921	13,500,360	27,069,872	204·6
1920	15,648,915	34,558,901	213·4

The aggregate for the first four months of this year was thus 4.4 per cent greater than in 1926, the previous high level of the record, while the average index number of wholesale prices of building materials continued to be lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 63 cities during April and March, 1927, and April, 1926. The 35 cities for which records are available since 1910 are marked with asterisks.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the work of construction contain the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Three of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. These schedules are given below.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is

the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts (Group "A") containing schedule of wages and hours

Construction of a dyke at Annieville Bar, Fraser River, New Westminster, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, April 26, 1927. Amount of contract, unit prices, approximate expenditure, $50,278.54.

Trade or Class of Labour	Rates of wages not less than	Hours per day	Hours per week
	$ cts. per day		
Pile driver foreman	9 50	8	44
Pile driver engineer	8 50	8	44
Pile driver fireman	7 50	8	44
Pile driverman	7 50	8	44
Pile driver boommen	7 50	8	44
Derrick engineer	8 50	8	44
Derrickman	7 50	8	44
Bridgeman	7 50	8	44
Labourers	45c. per hour	8	44

Construction of the Fourth Section of the North Jetty at Steveston, to extend existing Jetty 2,000 feet in a westerly direction towards the Gulf of Georgia, mouth of Fraser River, District of New Westminster, B.C. Name of

contractors, The Vancouver Pile Driving and Contracting Company, Limited, of Vancouver, B.C. Date of contract, April 27, 1927. Amount of contract, unit prices, approximate expenditure, $31,505.

Trade or Class of Labour	Rates of wages not less than	Hours per day	Hours per week
	$ cts. per day		
Pile driver foreman	9 50	8	44
Pile driver engineer	8 50	8	44
Pile driver fireman	7 50	8	44
Pile driverman	7 50	8	44
Pile driver boommen	7 50	8	44
Carpenters	7 50	8	44
Labourers	45c. per hour	8	44

Reconstruction of verandah, etc., at Rideau Hall, Ottawa, Ont. Name of contractor, Edouard Monette, Ottawa, Ont. Date of contract, May 20, 1927. Amount of contract, $3,150.

Trade or Class of Labour	Rates of wages not less than	Hours per day	Hours per week
	$ cts. per hour		
Marble and tile setters	1 00	8	44
Carpenters	75	8	44
Cement finishers	75	8	44
Sheet metal workers	83	8	44
Painters	65	8	44
Concrete workers	45	8	48
Excavators	45	8	48
Labourers (unskilled)	45	8	48
Carters (team and wagon)	1 00	8	48

Construction of a clock vault at the Dominion Observatory, Ottawa, Ont. Names of contractors, Robert Taylor and James Lackey of Ottawa, Ont. Date of contract, May 2, 1927. Amount of contract, $3,716.

Extension to wharf at Cap de le Madeleine, Champlain county, P.Q. Name of contractors, Munn & Shea, Limited, Montreal, P.Q. Date of contract, May 14, 1927. Amount of contract, unit prices, approximate expenditure, $110,942.

Docking, cleaning, painting and repairing dredge P.W.D., No. 303, Fruhling. Name of contractors, B.C. Marine Engineers and Shipbuilders, Limited, Vancouver, B.C. Date of contract, April 26, 1927. Amount of contract, $12,989.

Construction in concrete of the actual crib protection wall down stream from Victoria bridge at St. Lambert, Chambly county, P.Q. Name of contractor, Hormidas Gravel, St. Lambert, P.Q. Date of contract, May 17, 1927. Amount of contract, unit prices. Approximate expendiutre, $19,216.50.

Dredging area in front of ferry dock at Prescott, Ont. Name of contractors, The Randolphe Macdonald Company, Limited, Toronto, Ont. Date of contract, April 27, 1927. Amount of contract, approximate expenditure, $12,460.

Dredging at Canadian National Railways pier, Robin Jones and Whitman's piers, Lunenburg, N.S. Name of contractors. Beacon Dredging Company, Limited, Halifax, N.S. Date of contract, April 29, 1927. Amount of contract, approximate expenditure, $9,394.

Dredging area No. 1 at Main channel and area No. 2 in front of A.P.W. Pulp and Power Company's wharf at Sheet Harbour, N.S. Name of contractors, the Halifax Dredging Company, Limited, Halifax, N.S. Date of contract, May 19, 1927. Amount of contract, approximate expenditure, $20,266.

Dredging at Sorel Harbour, P.Q., areas A B. C. Name of contractors, Les Chantiers Manseau of Sorel, P.Q. Date of contract, May 5, 1927. Amount of contract, approximate expenditure, $78,630.

Repairs to boiler of tug *Storm King*. Name of contractors, Alex. McKay Company, Limited, Quebec city, P.Q. Date of contract, April 25, 1927. Amount of contract, $5,470.

POST OFFICE DEPARTMENT

The following is a statement of payments made in April, 1927, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 658 79
Making and repairing rubber stamps, daters, etc.	156 28
Making up and supplying letter carriers' uniforms, etc	14,346 84
Stamping pads, ink, etc	317 15
Bag fittings	22,016 03
Letter pouches	2,115 00
Cotton duck mail bagging	3,053 31
Scales	47 40

The total number of cases of poisoning, anthrax, and epitheliomatous and chrome ulceration in Great Britain and Northern Ireland, reported during April, 1927, under the Factory and Workshop Act or under the Lead Paint (Protection against Poisoning) Act, 1926, was 67. Twelve deaths were reported during the month, seven due to epitheliomatous ulceration, four due to lead poisoning and one due to anthrax. In addition one case of lead poisoning among house plumbers come to the knowledge of the Home Office during April, but notification of these cases is not obligatory.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE weekly family budget in terms of retail prices was again slightly lower in May, due mainly to seasonal changes, while the index number of wholesale prices constructed by the Dominion Bureau of Statistics was substantially higher, due mainly to higher prices for grains, flour and potatoes.

In retail prices the cost per week of a list of twenty-nine staple foods, for an average family of five in terms of the average retail prices in some sixty cities was $10.76 at the beginning of May, as compared with $10.80 for April; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918; and $7.43 for May, 1914. Besides seasonal declines in the prices of eggs, milk and butter there were less important declines in the prices of beans, evaporated apples, salt pork, lard, and potatoes. Prices of beef were substantially higher, while less important advances occurred in the prices of mutton, fresh pork and bacon. Including the cost of fuel and rent with that of foods, the total budget averaged $20.95 at the beginning of May, as compared with $21.02 for April; $21.54 for May, 1926; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; $26.92 for July, 1920 (the peak); $20.09 for May, 1918; and $14.21 for May, 1914. Fuel was again slightly lower, due to declines in the prices of anthracite coal. Changes in rent were practically negligible.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was substantially higher at 151.9 for May, as compared with 148.5 for April; 157.0 for May, 1926; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918. Forty-eight prices quotations were higher, fifty were lower and one hundred and thirty-eight were unchanged.

In the grouping according to chief component materials two of the eight main groups advanced, while four declined and two were practically unchanged. The Vegetables and their Products group and the Fibres, Textiles and Textile Products group were both higher, the former due to much higher prices for grains, flour and potatoes, and the latter mainly because of higher prices for cotton. The groups which declined were: the Animals and their Products group, higher prices for cattle, beef, and eggs being more than offset by declines in the prices of hogs, sheep, mutton, mess pork, milk and butter; the Non-Ferrous Metals group, due to lower prices for silver, lead, tin, spelter, solder and antimony; the Non-Metallic Minerals and their Products group, due to lower prices for gasoline and coal oil; and the Chemicals and Allied Products group. The Iron and its Product group and the Wood and Wood Products group were practically unchanged.

In the grouping according to purpose consumers' goods advanced, declines in the prices of milk, butter, cheese, boots, gasoline and coal oil being more than offset by higher prices for flour, beef, fowl, sugar, and potatoes. Producers' goods also advanced. Materials for the textile and clothing industries, for the fur industry, for the meat packing industries, for the milling and other industries, as well as miscellaneous producers' materials, were considerably higher; while materials for the leather industry, for the metal working industries and for the chemical using industries were somewhat lower.

In the grouping according to origin raw or partly manufactured goods were higher, lower levels for hogs, sheep, milk and non-ferrous metals being more than offset by higher prices for grains, raw sugar, potatoes, cattle, beef and cotton. Fully or chiefly manufactured goods were unchanged, advances in the prices of flour, sugar, and linseed oil being offset by declines in the prices of butter, cheese, gasoline, coal oil and non-ferrous metal products. Domestic farm products, articles of marine origin, and articles of mineral origin showed little change.

Professor Michell's index number of wholesale prices of forty articles, with prices during 1900-1909 as 100, was substantially higher at 170.6 for May, as compared with 163.8 for April; 176.9 for May, 1926; 270.2 for May, 1920; and 115.4 for May, 1914. The index of food stuffs advanced sharply, due to higher prices for beef, mutton, fish, cheese, sugar, flour, tapioca, potatoes and eggs. The index of manufacturers' goods was slightly higher, due to higher prices for cotton, hides, silver and rubber.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24." issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similiarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for

the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE for January on Prices in Canada and in Other Countries, page 9. This table gives figures for June and December each year from 1914 to 1926, inclusive. Figures are now available also for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly figures 1918 to 1926, and monthly figures for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, in weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base

(Continued on page 688)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA‡

cents per pound in April to 26.3 cents in May; rib roast from 22.5 cents per pound in April to 24.2 cents in May; and shoulder roast from 16.5 cents per pound in April to 17.9 cents in May. Veal was slightly lower at an average price of 20 cents per pound. Mutton rose from an average of 29.7 cents per pound in April to 30.3 cents in May. Fresh pork and bacon were also slightly higher, the former averaging 28.8 cents per pound and the latter 39.8 cents. In fresh fish cod steak and white fish were slightly higher, while halibut was somewhat lower. Lard was down from an average of 22.1 cents per pound to 21.9 cents.

Eggs were again somewhat lower, fresh averaging 35.1 cents per dozen in May, as compared with 38 cents in April and 50.9 cents in March; and cooking averaging 31.7 cents per dozen in May, 34.5 cents in April and 44.7 cents in March. Lower prices were reported from practically all localities. Milk declined in the average from 12.1 cents per quart in April to 11.8 cents per quart in May. Lower prices were reported from St. Hyacinthe, Montreal, Hull, Ottawa, Oshawa, Toronto, Hamilton, London, Woodstock, Sudbury, Port Arthur, Fort William, Brandon, New Westminster and Vancouver. Butter averaged slightly lower, dairy being down from 44.1 cents per pound in April to 43.9 cents in May and creamery from 49.6 cents per pound in April to 49.1 cents in May. Prices in the Western and the Maritime Provinces advanced but these increases were more than offset by declines in Ontario and Quebec. Cheese was unchanged at an average of 30.8 cents per pound, lower prices in some localities being offset by advances in others.

Both bread and flour were unchanged, the former at 7.6 cents per pound and the latter at 5.2 cents per pound. Rolled oats were steady. Canned vegetables showed little change. Beans were slightly lower averaging 8.1 cents per pound. Potatoes averaged $1.65 per ninety pounds, as compared with $1.70 in April and $1.84 in March. Slightly lower prices were reported from most localities. Evaporated apples declined from an average of 19.7 cents per pound in April to 19.3 cents in May. Raisins and currants showed little change. Sugar was unchanged in the average at 8.4 cents per pound, slight declines in the eastern provinces being offset by advances in the western. Anthracite coal was down from an average of $16.67 per ton in April to $16.40 in May. Lower prices were reported from Halifax, Quebec, Three Rivers, Sherbrooke, St. Hyacinthe, St. John's, Thetford Mines, Montreal, Ottawa, Peterborough, Orillia, Niagara Falls, St. Catharines, Hamilton, Woodstock and Owen Sound. Bituminous coal was also slightly lower, averaging $10.24 per ton. Coke was down from an average of $13.22 in April to $13.11 in May. Wood showed little change, hardwood averaging $12.16 per cord and soft $8.90. Changes in rent were slight.

Wholesale Prices

The following is a summary of a statement of wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to substantially higher levels, the average for Manitoba Northern cash wheat, Fort William and Port Arthur basis, advanced from $1.45 to $1.56 per bushel. The low price for the month was $1.49 reached on the 2nd and the high $1.69⅛ on the 30th. The increase was said to be due mainly to adverse crop conditions in the Canadian west and in the United States. Coarse grains moved in sympathy with wheat, western barley at Winnipeg being up from 79½ cents per bushel to 87½ cents; western oats from 57½ cents per bushel to 62 cents; flax seed from $1.91½ per bushel to $2; corn, at Toronto, from 82½ cents per bushel to $1; Ontario barley from 64 cents per bushel to 72½ cents; peas from $1.55 per bushel to $1.60; and rye from 97⅛ cents per bushel to $1.01. Flour also advanced sharply, the price at Toronto being up from $8.03 per barrel to $8.58. Raw sugar advanced from $4.36½ per hundred pounds to $4.42¾; granulated from $6.31⅜ to $6.41¼; and yellow from $5.93¾ to $6.03¼. The increase was said to be due to restriction of crops in Cuba and to the shortage in European beet sugar. Linseed oil advanced from 93 cents per gallon to 96 cents. Ceylon tea rose from 50¼ cents per pound to 52½ cents. Potatoes increased in price in all localities. Quebec potatoes at Montreal were up from $1.35 per bag to $2.09½; Ontario potatoes at Toronto from $1.48½ per bag to $2.30; Manitoba potatoes at Winnipeg from 66 cents per bushel to 77½ cents; and New Brunswick potatoes at St. John from $2.25-$2.50 per barrel to $3.75-$4. Turpentine declined from $1.20 per gallon to $1.15. Hay rose from $16.50 per ton to $17.25 and straw from $10.12 per ton to $10.64. Western cattle at Winnipeg advanced from $8.26 per hundred pounds to $9.63 and choice steers at Toronto from $8.32 per hundred pounds to $9.04. Hogs were again lower at Toronto being $10 per hundred pounds, as compared with $10.76 in April. Choice sheep at Toronto were down from $8.50 per hundred pounds to $7.06. Meats followed the trend

in live stock, beef, forequarter, at Toronto advancing from $10.75 per hundred pounds to $11, and hindquarter from $16.50 per hundred pounds to $18. Mutton fell from 15 cents per pound to 12½ cents. Barrelled pork declined from $31 per barrel to $30.50. At Toronto the price of milk to producers declined from $2.20 per eight gallon can to $1.95, and the wholesale price from 37 cents per gallon to 35 cents. Finest creamery butter at Montreal was down to 38 cents per pound, as compared with 39 cents in April. At Toronto creamery prints were down from 45 cents to 40 cents per pound, solids from 47 cents per pound to 40 cents, and dairy prints from 34½ cents per pound to 34 cents. Cheese declined 2 cents per pound to 20 cents. Fresh eggs showed little change being 35-37 cents per dozen in May, as compared with 36-38 cents in April. Men's heavy grain boots were down from $2.60 per pair to $2.32. Raw cotton at New York was up from an average of 14¾ cents per pound to 16 cents. The low price for the month was 15.3 cents at the beginning and the high 16¾ cents at the end. The higher prices were said to be due to the damage caused by the floods and to unfavourable weather conditions in other areas. Japan silk was down from $5.70 per pound to $5.55. The prices of non-ferrous metals continued to decline, tin being down from 69 cents per pound to 67 cents; lead from $7.45 per cwt. to $6.90; zinc from $7.95 per cwt. to $7.63; antimony from 12¾ cents per pound to 11½ cents; and silver from 56¼ cents per ounce to 56 cents. Gasoline at Toronto was down from 23½ cents per gallon in April to 21½ cents in May, and coal oil from 23 cents per gallon in April to 21 cents in May.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Prices in the majority of countries continued to show a slight downward trend.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913 = 100, was 139.8 for April, a decline of 0.6 per cent. Foods rose slightly, chiefly owing to increases in the group "other foods". Non-foods declined 1.3 per cent, with declines in all groups except "textiles other than cotton". The index number of the group "metals and minerals other than iron and steel" declined 4 per cent. On the base average prices for 1924 = 100, the index number for April was 84.1.

The *Statist* index number (in continuation of Sauerbeck's figures) was 123.3 in April, showing a decline of 0.2 per cent as compared with the previous month. Foodstuffs rose 1.7 per cent, with advances in all groups. Materials declined somewhat owing to a decline in the minerals group caused by recessions in pig iron, iron bars, non-ferrous metals and coal.

The *Times* index number, on the base 1913 =100, was 139.2 at the close of April, a decline of 0.6 per cent from the previous month's level. Foods were 0.3 per cent higher, with advances in cereals and meat and fish, and declines in "other food". Materials declined 1.0 per cent, with an advance of 4.0 per cent in cotton, a slight advance in the miscellaneous group, and declines in metals and minerals and in textiles other than cotton.

COST OF LIVING.—At the end of April the index number of the Ministry of Labour was 164 on the base July, 1914 = 100, as compared with 165 a month earlier. Foods declined one point and fuel and light declined 5 points. Other groups showed no change.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office was 19,721 in May, on the basis of prices in kronen, first half of 1914 = 1. This showed an advance of 1.8 per cent on the previous month. Foods were responsible for the change, industrial materials having shown a slight decline. The index of gold prices, first half of 1914 = 100, was 137 for May, foods being 134 and industrial materials 143.

COST OF LIVING.—The official index number was 15,131 in May, on the base July, 1914 = 1. This was a very slight advance over the previous level, 15,079. There was an advance in clothing prices and a decline in heat and light, with not much change in the remaining groups.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914 = 100, was 858 in March, as compared with 854 in Febru-

ary. The principal changes shown were declines in fuels and tar and products and resin products, and advances in textiles and raw rubber.

Finland

COST OF LIVING.—The index number of the Ministry of Social Affairs, on the base July, 1914 = 100, was 1164.7 in March, a slight decline for the month. Foods declined about one per cent and other groups were practically unchanged.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914= 100, was 650 for April, showing a decline of 0.8 per cent for the month. Native products were unchanged, and imports declined 2.1 per cent. All foods rose slightly owing to increases in prices of vegetable foods, and all industrial foods declined slightly.

Germany

WHOLESALE PRICES.—The index number of the Official Statistical Office, on the base 1913=100, was 134.8 for March, a decline of only 0.1 per cent. There were some slight seasonal variations, agricultural products declining 0.6 per cent for the month. Raw and semi-manufactured materials declined 0.3 per cent, with a decline of 3 per cent in coal. Manufactured goods advanced 0.7 per cent.

COST OF LIVING.—The official index number of cost of living was 146.4 for April, being one per cent above the previous month's level. Foods declined 0.6 per cent owing to declines in prices of eggs, meat and milk. Clothing declined 0.3 per cent. Fuel declined 1 per cent. Sundries advanced 0.4 per cent owing to increases in street car fares in certain localities. The index was chiefly affected by an order fixing the minimum monthly rent at 110 per cent of the pre-war level, the index number for rents rising to 115.1.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, was 565.29 for April, on the base 1913=100. This was the eighth successive decline from a peak of 691.35 reached in August, 1926, and was a drop of 4.8 per cent from the level of the month of March. Foods declined 3.3 per cent and industrial materials 5.2 per cent.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office was unchanged in March, being 1,544 on the base average annual aggregate expenditure, four chief centres, 1909-13=1,000. Foods, etc., of vegetable origin declined somewhat, as did textile manufactures. Wood and wood products and animal products rose slightly. Other groups showed no change.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number registered 144.2 for April as compared with 145.3 for March, on the base 1913=100.0, a decline of 0.75 per cent. There was a decline in the fuel group, owing to reduction in the prices of crude petroleum and all petroleum products, and anthracite coal. Building materials decreased one per cent and there were slight decreases in metals and miscellaneous commodities. Farm products, foods, clothing materials, and chemicals and drugs showed slight advances, and no change took place in housefurnishing goods.

Irving Fisher's index number on the base pre-war prices=100, showed the average prices for May to be 140.0, this being the same as the average for April.

Bradstreet's index number (showing the cost of a list of 106 commodities) was $12.4265 on June 1, a decrease of only 0.1 per cent. Six groups declined while five advanced and two were unchanged. Provisions fell heavily, with declines in meats, butter and eggs, while prices of leather and hides, textiles (especially cotton goods) and vegetable oils advanced.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts was 159.2 in April, on the base 1913=100, a slight increase over the March level. Foods increased 1 per cent and fuel declined 1.6 per cent. Sundries and clothing declined slightly and shelter was unchanged.

An electrician employed by a hotel company at Montreal in connection with the construction of an addition to the hotel, sustained an accident in the course of his employment, resulting in the total loss of the left eye. He brought an action under the Workmen's Compensation Act of Quebec, claiming $3,375 in compensation. The employing company contended that the business of an hotel was not included under the act, but on this point the court held that on the present occasion the company acted as a building contractor, engaging its own workmen for the purpose, and was therefore subject to the provisions of the act. However, as the annual earnings of the workman were in excess of $1,500, the limit fixed by the act for the income of workmen who may be compensated, the law was found to be inapplicable in this case on that ground

RECENT LEGAL DECISIONS AFFECTING LABOUR

Master not Liable for Injury to Servant Assuming Risk

THE Supreme Court of Canada, in a recent decision, reversed the judgment of the Saskatchewan Court of Appeal in the case *Sigerseth versus Pederson,* reported in the LABOUR GAZETTE, June, 1926, page 625, where the facts were stated. The action was brought against the administrators of the estate of Sigerseth, a farmer, by Pederson, a labourer employed by the deceased. The men had lived together in a shack, which was usually heated by a stove. During a cold spell the stove proved to be defective, and the farmer was asphyxiated by gas fumes and frozen to death, while the hired man's feet were frozen. The latter asked for damages against the estate, claiming that negligence had been shown by the deceased in failing to provide adequate heating. The trial judge considered that a case of negligence was not made out and dismissed the action. The Saskatchewan Court of Appeal reversed this judgment and awarded substantial damages to the hired man. In restoring the judgment of the trial court the Supreme Court of Canada stated:

"In my opinion, the deceased did all that a reasonable man would have done to render the shack safe as a residence for the respondent and himself. If the respondent's suggestion that his death was caused by suffocation from coal gas and freezing be justified, he sacrificed his life in looking after the fire while the respondent slept. It is a case of misadventure and not of negligence.

"Moreover, if, as the respondent contends, there was no obvious danger, this danger was as obvious to the respondent as to the deceased. And the respondent with every means of information that the deceased possessed, voluntarily remained in the shack and slept there after the cleaning of the pipes. On the evidence, it is not merely a case of knowledge by the respondent of a possible danger, but of free acceptance by him of any risk there might have been in the existing conditions. I cannot see any ground for holding the appellant liable in damages for the respondent's injuries."

(Supreme Court of Canada—Sigerseth versus Pederson).

Master is Liable for Unlawful Act of Servant

A Chinese merchant who conducted a small general and tobacco store in British Columbia was in the habit of obtaining his supplies of tobacco from a wholesale firm, transacting all business with this firm through its manager. While the merchant was absent from his store on business the manager of the wholesale firm, being informed or suspecting that the merchant had abandoned his business, entered the premises and removed not only the tobacco but all other goods in the store to a place of safe keeping. The Chinese merchant returning after his trip sent a protest through a solicitor to the manager, who promptly returned the goods. He then took action against the wholesale company claiming damages for the wrongful act of its agent. The County Court, which heard the case, held that there was no doubt that the manager's conduct had been wrongful, and the only question was whether the company which employed him should be held liable for his wrongful act. On this point it decided that the manager's acts were clearly acts "done in the course of the servant's employment," and done for the supposed interest of the master. The defendant was therefore held "properly answerable in law for the tortious act of his servant done in the course of his employment and for his master's interest." The judgment pointed out moreover that "the humble store of this Chinese plaintiff was at once his store and his residence at the rear. . . . . A very grave invasion of the plaintiff's rights has been committed here." Damages were assessed in the sum of $100 and costs.

—(British Columbia—Wing Kee versus Butt.)

Payment of Commission must continue after Termination of Employment for Specific Purpose

An agent employed by a brewing company in Alberta to find a market in Saskatchewan for its product was dismissed after he had established a business connection in the latter province. With the notice of dismissal the company enclosed a cheque for an amount representing a percentage on sales up to that date. The agent replied claiming that if the company continued to ship beer into Saskatchewan it would be liable to pay him a commission also on future sales. When he brought action to enforce this alleged liability on the part of the company, the trial judge found in his favour, this decision being subsequently affirmed in the Alberta Supreme Court, Appellate Division; the principle being thus established that when an agent is employed to do a certain thing and his compensation is fixed as a certain percentage on all resulting business, he is entitled to his commission even after the termination of his employment.

—(Alberta-Johnson versus Medicine Hat Brewing Company Limited.)

Legality of Notices of Dismissal of School Teachers in Alberta

The judgment of Mr. Justice Boyle of the Alberta Supreme Court in dismissing an action by twelve school teachers against the school trustees at Blairmore, Alberta, for alleged wrongful dismissal, was outlined in the LABOUR GAZETTE, July 1926, page 735. The teachers subsequently appealed against this decision, which however was affirmed by the Appellate Division.

The trial judge described this action as a trial of strength between the Teachers' Alliance and the district school trustees. The dispute arose out of the action of the trustees in sending notices to the teachers individually, asking them to accept a new salary schedule. The teachers replied to this communication in a joint letter declaring that while they signed separate agreements, they were in the hands of the executive of the Alliance when the question of altering the schedule arose. The Board thereupon sent them notices of the termination of their agreement, as required by the Alberta Schools Act. At a later meeting the Board agreed to meet the representative of the Alliance, who however failed to appear owing to a misunderstanding. Second notices of dismissal were then issued by the Board. The questions at issue were whether or not the notices of dismissal had been in accordance with the requirements of the Schools Act, and whether or not the first notice became invalidated by the issuance of the second notice.

Chief Justice Harvey, in affirming the decision of the trial judge, said:

"There seems little reason to doubt that the purpose of giving the teachers the opportunity of learning the reasons for which the contract is to be terminated before it is terminated, is to avoid, in a proper case the necessity of its termination. This purpose would be entirely frustrated if the board must have determined to terminate the contract before the meeting at which the reasons are disclosed, is held. While that would be quite within the letter of the contract, it certainly is not required by and seems opposed to its spirit. The letter giving notice of the meeting of June 16 (after which the first notice was isued) could leave no room for doubt in the mind of an educated intelligent person, as each recipient must have been, that the probable if not certain consequence of the refusal to accept the proposed terms or to treat respecting them would be a determination of the contract.

"The plaintiffs had a perfect right to refuse to treat except in the manner which they proposed, but the board on its part had an equally perfect right to refuse to treat in that way. The minutes of the meeting above set out show that the reasons for the subsequent determination were clearly disclosed and that no other reasons were even suggested. The action of the board, while firm and dignified, seems to have ben entirely reasonable and proper and in full compliance with the letter and the spirit of the contract.

"Although raised at the trial and in the *factum* it was only shortly argued before us that the board had lost the right to rely on the procedure up to June 27 because of its taking the subsequent proceedings, and we feel no doubt that effect cannot be given to that contention since it is clear that nothing whatever was done to indicate the least intention on the part of the board to treat the contract as still subsisting, the proceedings being taken merely to confirm, or to supply any possible defects in, the earlier proceedings and the plaintiffs being in no way misled to their prejudice thereby."

(*Alberta—Thoreson et al, versus Board of Trustees, Blairmore School District*).

Boycott of Non-Union Material Held to Violate Anti-Trust Law

The Supreme Court of the United States, in an important judgment handed down on April 13, reversed the decision of the United States Circuit Court of Appeals in the case *Bedford Cut Stone Company et al versus Journeymen Stone Cutters' Association.*

The union called a strike against the handling of the product of the company because it employs non-union workmen. Local unions were restrained by the "General Union" from handling the "unfair" stone, even to the extremity of revoking union cards, and even when such action was contrary to the wishes of the locals. The company alleged that these actions on the part of the union constituted a restraint of interstate commerce and violated the federal Anti-Trust Act.

The decision of the Supreme Court was read by Mr. Justice Sutherland who stated: "The record does not disclose whether petitioners at the time of bringing suit had suffered actual injury; but that is not material. An intent to restrain interstate commerce being shown, it is enough to justify equitable interposition by injunction if there be a dangerous probability that such action will happen; and this clearly appears".

Dissenting opinions were written by Mr. Justice Brandeis and Mr. Justice Holmes, while Mr. Justice Sanford and Mr. Justice Stone wrote separate opinions concurring with the majority.

Judgment of Court

Mr. Justice Sutherland gave an account of the undertakings of the company in the State of Indiana, and of the Union, whose headquarters also were in Indiana, the members numbering about 5,000 persons, divided into more than 150 local unions in various states and in Canada.

This suit was brought by petitioners against the General Union and some of its officers, and a number of affiliated local unions and some of their officers, to enjoin them from combining and conspiring together to commit, and from committing, various acts in restraint of interstate commerce in violation of the federal Anti-Trust Act, and to petitioners' great and irreparable damage. The federal district court for the district of Indiana, after a hearing refused a preliminary injunction and, subsequently, on final hearing, entered a decree dismissing the bill for want of equity. On appeal, this decree was affirmed by the court of appeals upon the authority of an earlier opinion in the same case. . . . .

Before 1921, petitioners carried on their work in Indiana under written agreement with the General Union, but since that time they have operated under agreements with unaffiliated unions, with the effect of closing their shops and quarries against the members of the General Union and its locals. Prior to the filing of the bill of complaint, the General Union issued a notice to all its locals and members, directing its members not to work on stone "that has been started—planed, turned, cut, or semi-finished—by men working in opposition to our organization," and setting forth that a convention of the union had determined that "members were to rigidly enforce the rule to keep off all work started by men working in opposition to our organization, with the exception of the work of Shea-Donnelly, which firm holds an injunction against our association." Stone produced by petitioners by labour eligible to membership in respondents' unions was declared "unfair"; and the president of the General Union announced that the rule against handling such stone was to be promptly enforced in every part of the country. Most of the stone workers employed, outside the state of Indiana, on the buildings where petitioners' produt is used, are members of the General Union; and in most of the industrial centres, building construction is on a closed shop union basis.

The rule requiring members to refrain from working on "unfair" stone was persistently adhered to and effectively enforced against petitioners' product, in a large number of cities and in many states. The evidence shows many instances of interference with the use of petitioners' stone by interstate customers, and expressions of apprehension on the part of such customers of labour troubles if they purchased the stone. The president of the General Union himself testified, in effect, that generally the men were living up to the order and if it were shown to him that they did not do so in any place he would see that they did. Members found working on petitioners' product, were ordered to stop and threatened with a revocation of their cards if they continued; and the order of the General Union seems to have been enforced even when it might be against the desire of the local union. . . . .

The evidence makes plain that neither the General Union nor the locals had any grievance against any of the builders—local purchasers of the stone—or any other local grievance; and that the strikes were ordered and conducted for the sole purpose of preventing the use and, consequently, the sale and shipment in interstate commerce, of petitioner's product, in order, by threatening the loss or serious curtailment of their interstate market, to force petitioners to the alternative of coming to undesired terms with the members of these unions. . . . .

From a consideration of all the evidence, it is apparent that the enforcement of the general order to strike against petitioners' product could have had no purpose other than that of coercing or inducing the local employers to refrain from purchasing such product. To accept the assertion made here to the contrary, would be to say that the order and the effort to enforce it were vain and idle things without any rational purpose whatsoever. And indeed, on the argument, in answer to a question from the bench, counsel for respondents very frankly said that, unless petitioners' interstate trade in the so-called unfair stone were injuriously affected, the strikes would acomplish nothing.

That the means adopted to bring about the contemplated restraint of commerce operated after physical transportation had ended is immaterial. . . . . These interferences were not in pursuit of a local motive—they had for their primary aim restraint of the interstate sale and shipment of the commodity. . . . . Prevention of the use of petitioners' product, which, without more, might have been a purely local matter, therefore, was only a part of the conspiracy, which must be construed as an entirety; and, when so regarded, the local transactions become a part of the general plan and purpose to destroy or narrow petitioners' interstate trade. In other words, strikes against the local use of the product were simply the means adopted to effect the unlawful restraint. And it is this result, not the means devised to secure it, which gives character to the conspiracy.

Respondents' chief contention is that "their sole and only purpose. . . . . was to unionize the cutters and carvers of stone at the quarries." And it may be conceded that this was the ultimate end in view. But how was that end to be effected? The evidence shows indubitably that it was by an attack upon the use of the product in other states to which it had been and was being shipped, with the intent and purpose of bringing about the loss or serious reduction of petitioners' interstate business, and thereby forcing compliance with the demands of the unions. And, since these strikes were directed against the use of petitioners' product in other states, with the plain design of suppressing or narrowing the interstate market, it is no answer to say that the ultimate object to be accomplished was to bring about a change of conduct on the part of petitioners in respect of the employment of union members in Indiana. A restraint of interstate commerce cannot be justified by the fact that the ultimate object of the participants was to secure an ulterior benefit which they might have been at liberty to pursue by means not involving such restraint.

After giving an outline of various previous judgments in similar cases, the judgment concluded:—

Whatever may be said as to the motives of the respondents or their general right to combine for the purpose of redressing alleged grievances of their fellow craftsmen or of protecting themselves or their organizations, the present combination deliberately adopted a course of conduct which directly and substantially curtailed, or threatened thus to curtail, the natural flow in interstate commerce of a very large proportion of the building limestone production of the entire country, to the gravely probable disadvantage of producers, purchasers and the public; and it must be held to be a combination in undue and unreasonable restraint of such commerce within the meaning of the Anti-Trust Act as interpreted by this court. An act which lawfully might be done by one, may when done by many acting in concert, take on the form of a conspiracy and become a public wrong, and may be prohibited if the result be hurtful to the public or to individuals against whom such concerted action is directed, and any suggestion that such concerted action here may be justified as a necessary defensive measure is completely answered by the words of this court in Eastern States Lumber Association versus United States, that "Congress, with the right to control the field of interstate commerce, has so legislated as to prevent resort to practices which unduly restrain competition or unduly obstruct the free flow of such commerce, and private choice of means must yield to the national authority thus exerted."

The record does not disclose whether petitioners at the time of bringing suit had suffered actual injury; but that is not material. An intent to restrain interstate commerce being shown, it is enough to justify equitable interposition by injunction if there be a dangerous probability that such injury will happen; and this clearly appears. The Anti-Trust Act "directs itself against that dangerous probability as well as against the completed result."

From the foregoing review, it is manifest that the acts and conduct of respondents fall within the terms of the Anti-Trust Act; and petitioners are entitled to relief by injunction under section 16 of the Clayton Act, by which they are authorized to sue for such relief "against threatened loss or damage by a violation of the anti-trust laws," etc. The strike, ordered and carried out with the sole object of preventing the use and installation of petitioners' product in other states, necessarily threatened to destroy or narrow petitioners' interstate trade by taking from them their customers. That the organizations, in general purpose and in and of themselves, were lawful and that the ultimate result aimed at may not have been illegal in itself, are beside the point. Where the means adopted are unlawful, the innocent general character of the organizations adopting them or the lawfulness of the ultimate end sought to be attained, cannot serve as a justification.

Dissenting Opinion of Mr. Justice Brandeis

Mr. Justice Brandeis, in the course of a dissenting judgment, said:

If in the struggle for existence, individual workingmen may, under any circumstances, cooperate in this way for self-protection even though the interstate trade of another is thereby restrained, the lower courts were clearly right in denying the injunction sought by plaintiffs. I have no occasion to consider whether the restraint, which was applied wholly intrastate, became in its operation a direct restraint upon interstate commerce. For it has long been settled that only unreasonable restraints are prohibited by the Sherman Law. . . . . And the restraint imposed was, in my opinion, a reasonable one. The Act does not establish the standard of reasonableness. What is reasonable must be determined by the application of principles of the common law, as administered in federal courts unaffected by state legislation or decisions. Compare Duplex Printing Company versus Deering. Tested by these principles, the propriety of the unions' conduct can hardly be doubtful by one who believes in the organization of labour.

Neither the individual stonecutters, nor the unions, had any contract with any of the plaintiffs or with any of their customers. So far as concerned the plaintiffs and their customers, the individual stonecutters were free either to work or to abstain from working on stone which had been cut at the quarries by members of the employers' union. So far as concerned the association, the individual stonecutter was not free. He had agreed, when he became a member, that he would not work on stone "cut by men working in opposition to" the association. It was in duty bound to urge upon its members observance of the obligation assumed. These cut stone companies, who alone are seeking relief, were its declared enemies. They were seeking to destroy it. And the danger was great.

The plaintiffs are not weak employers opposed by a mighty union. They have large financial resources. Together, they ship 70 per cent of all the cut stone in the country. They are not isolated concerns. They had combined in a local employers' association. And their organization is affiliated with the national employers organization, called "International Cut Stone and Quarrymen's Association." Standing alone, each of the 150 journeymen's locals is weak. The average number of members in a local union is only 33. The locals are widely scattered throughout the country. Strong employers could destroy a local "by importing scabs" from other cities. And many of the builders by whom the stonecutters were employed in different cities, are strong. It is only through combining the 5,000 organized stonecutters in a national union and developing loyalty to it, that the individual stonecutter anywhere can protect his own job.

The manner in which these individual stonecutters exercised their asserted right to perform their union duty by refusing to finish stone "cut by men working in opposition to" the association was confessedly legal. They were innocent alike of trespass and of breach of contract. They did not picket. They refrained from violence, intimidation, fraud and threats. They refrained from obstructing otherwise either the plaintiffs or their customers in attempts to secure other help. They did not plan a boycott against any of the plaintiffs or against builders who used the plaintiffs' product. On the contrary, they expressed entire willingness to cut and finish anywhere any stone quarried by any of the plaintiffs, except such stone as had been partially "cut by men working in op-

position to" the Association. A large part of the plaintiffs' product, consisting of blocks, slabs and sawed work was not affected by the order of the union officials. The individual stonecutter was thus clearly innocent of wrongdoing, unless it was illegal for him to agree with his fellow craftsmen to refrain from working on the "scab" cut stone because it was an article of interstate commerce.

The manner in which the Journeymens' unions acted was also clearly legal. The combination complained of is the co-operation of persons wholly of the same craft, united in a national union, solely for self-protection. No outsider—be he quarrier, dealer, builder or labourer—was a party to the combination. No purpose was to be subserved except to promote the trade interests of members of the Journeymen's Association. There was no attempt by the unions to boycott the plaintiffs. There was no attempt to seek the aid of members of any other craft, by a sympathetic strike or otherwise. The contest was not a class struggle. It was a struggle between particular employers and their employees. But the controversy out of which it arose, related, not to specific grievances, but to fundamental matters of union policy of general application throughout the country. The national association had the duty to determine, so far as its members were concerned, what that policy should be. It deemed the maintenance of that policy a matter of vital interest to each member of the union. The duty rested upon it to enforce its policy by all legitimate means. The association, its locals and officers were clearly innocent of wrongdoing, unless Congress has declared that for union officials to urge members to refrain from working on stone "cut by men working in opposition" to it is necessarily illegal if thereby the interstate trade of another is restrained.

Judge Brandeis concluded as follows:

Members of the Journeymen's Stone Cutters' Association could not work anywhere on stone which has been cut at the quarries by "men working in opposition" to it, without aiding and abetting the enemy. Observance by each member of the provision of their constitution which forbids such action was essential to his own self-protection. It was demanded of each by loyalty to the organization and to his fellows. If, on the undisputed facts of this case, refusal to work can be enjoined, Congress created by the Sherman Law and the Clayton Act an instrument for imposing restraints upon labour which reminds of involuntary servitude. The Shermen Law was held in *United States versus United States Steel Corporation,* to permit capitalists to combine in a single corporation 50 per cent of the steel industry of the United States dominating the trade through its vast resources. The Sherman Law was held in *United States versus United Shoe Machinery Company,* to permit capitalists to combine in another corporation practically the whole shoe machinery industry of the country, necessarily giving it a position of dominance over shoe-manufacturing in America. It would, indeed, be strange if Congress had by the same Act willed to deny to members of a small craft of workingmen the right to co-operate in simply refraining from work, when that course was the only means of self-protection against a combination of militant and powerful employers. I cannot believe that Congress did so.

Mr. Justice Holmes concurred in this opinion.

Peaceful Picketing Permitted in New York State

The right of trade unions to engage in peaceful picketing was upheld by the Court of Appeals of the State of New York in a decision given on May 31. Officers of the Waiters' and Waitresses' Union sought to unionize the waitresses employed by the Exchange Bakery and Restaurant, Manhattan. They entered the place and blew a whistle when the proprietors refused to unionize the business. The Appellate Division had granted the request of the proprietors for an injunction restraining the union from patrolling the street in front of the restaurant, and from "approaching, accosting, threatening, assaulting or intimidating" other persons desiring to enter the premises. The Court of Appeals, however, held in effect that no injunction should be granted in this case. The judgment declared that the purpose of a labour union to improve the conditions under which its members do their work, to increase their wages, to assist them in other ways, may justify what would otherwise be a wrong. So would an effort to increase its numbers and to unionize an entire trade or business.

"It may be as interseted in the wages of those not members, or in the conditions under which they work as in its own members, because of the influence of one upon the other. * * * Economic organization today is not based on the single shop.

"Picketing without a strike is no more unlawful than a strike without picketing. Both are based upon a lawful purpose. Resulting injury is incidental and must be endured.

"We have been speaking in the terms of the workman. We might equally have spoken in terms of the employer. The rule that applies to the one also applies to the other. The latter may hire and discharge men when and where he chooses and for any reason. But again any combination must be for lawful ends secured by lawful means. If believed to be for their interests, employers may agree to employ non-union men only. By proper persuasion they may induce union men to resign from their unions.

"The means adopted must be lawful."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27[JULY, 1927 [NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THERE was a further pronounced increase in employment in industry in Canada at the beginning of June, the gains reported at this date making the employment situation more favourable than in any month since 1920. This statement is based on statistics tabulated by the Dominion Bureau of Statistics from returns received from 6,150 employers, each with a minimum of fifteen employees, representing practically every industry except agriculture, fishing and highly specialized business operations. These firms employed 876,768 workers, as compared with 832,872 on May 1. The index number (with January 1920 as 100) stood at 105.9 as compared with 100.6 in the preceding month, and with 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6 on June 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed a nominal increase in the volume of business transacted during May, as indicated by the average daily number of placements in employment. At the beginning of June the percentage of unemployment among the members of reporting trade unions stood at 5.2 as compared with percentages of 6.0 at the beginning of May and 4.9 at the beginning of June, 1926. The percentage for June is based on returns received by the Department of Labour from 1,576 local trade unions with a combined membership of 163,754 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $10.86 at the beginning of June, as compared with $10.76 for May; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and 7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 153.5 for June, as compared with 151.9 for May; 155.7 for June, 1926; 158.6 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak); 201.7 for June, 1919; and 196.0 for June, 1918.

The time loss due to industrial disputes in June, 1927, was less than during May, 1927, and less than during June, 1926. Sixteen disputes were in existence at some time during the month, involving 1,751 workpeople, and resulting in a time loss of 16,139 working days. Corresponding figures for May, 1927, were: seventeen disputes, 4,772 workpeople and 20,766 working days, and in June, 1926, fifteen disputes, 2,881 workpeople and 35,769 working days.

Industrial Disputes Investigation Act, 1907

During the month of June the Department received two new applications for the establishment of Boards of Conciliation and Investigation. No action was taken in regard to an application received in the previous month from the municipal employees at Winnipeg, as the city authorities declined to join in the request for a Board and the consent of both parties was necessary in this class of employment. In the case of the dispute between the Canadian Pacific Railway Company and its clerks, etc., the company having declined to accept the recommendations of the Board, a basis for agreement was reached during the month through the mediation of the Minister of Labour. A full account of recent proceedings under the Act appear on page.....

Vocational Education Bulletin

Bulletin No. 21 of the Vocational Education Series has just been issued by the Technical Education Branch of the Department of Labour. This publication is entitled Woodworking and Building Construction. It was compiled from material contributed by teachers in the woodworking departments of representative vocational schools throughout the Dominion. The bulletin is divided into two parts, the first consisting of outlines of the various courses in woodworking and building construction in day and evening classes, the second being a list of recommended text-books and references for use in the various woodworking departments.

Ministers of Labour of Canada 1900-1927

Portraits appear in this issue of all the ministers who have presided over the Department of Labour of Canada since its establishment in 1900. The Department was organized in that year under the authority of the Conciliation Act. From 1900 to 1909 it was administered by the Postmaster General, who combined with that office the portfolio of labour. The Labour Department Act of 1909 placed the Department for the first time under a separate minister of labour.

Progress of labour in Canada 1867-1927

In connection with the celebration of the 60th anniversary of Confederation on July 1, an article on another page of this issue describes the development of labour in Canada during this period, with special reference to the progress of labour organization and labour legislation.

Labour legislation in Canada in 1926

The Department of Labour has now ready the sixth annual supplement to "Labour Legislation in Canada as existing on December 31, 1920," published by the Department in 1921. The new supplement contains the text of the labour laws enacted in 1926, and, like its predecessors, it includes also a cumulative index to the series, providing a guide to all labour legislation enacted by the Dominion parliament and by the legislatures of the provinces to the end of 1926.

The legislation of the year was outlined in the LABOUR GAZETTE shortly after the termination of the sessions of the various legisiatures. In British Columbia, Nova Scotia, New Brunswick, Manitoba, and Saskatchewan, legislation has been passed to make available the Dominion Industrial Disputes Investigation Act, 1907, in the settlement of disputes within the exclusive jurisdiction of the province concerned. Alberta passed a law based on the Industrial Disputes Investigation Act, omitting the sections prohibiting a strike or lockout prior to reference to a board and providing for a provincial board of conciliation. A new Factories Act was enacted in Alberta extending to men the minimum wages formerly fixed only for women in the establishments covered by the Act, and establishing a normal working day of nine hours for factory workers. The Act further made provision for the appointment of a commission of three members to investigate the question of a forty-eight hour week (the report of this commission was given in the LABOUR GAZETTE, April, 1927, page 385). In the Province of Quebec a new Workmen's Compensation Act was passed, to take effect on April 1, 1927. During the session of 1927, however, the operation of the act was postponed for one year, the employers and employees in the province having opposed certain of its provisions, and it is understood that the question of establishing a Workmen's Compensation Board for the Province is to receive further consideration at the next session (LABOUR GAZETTE, April, 1927, page 346). Prince Edward Island enacted a Railway Employees Compensation Act which, subject to the consent of the Federal government, provides for the creation of an accident fund under the provisions of the Workmen's Compensation law enacted by the Parliament of Canada in 1918. The Ontario Act was amended by the addition of silicosis to the schedule of industrial diseases. A new body, the Corporation of Technical or Vocational Schools, was created by an Act of the Quebec Legislature to administer technical education in that Province. The House of Commons on March 15, 1926, considered a resolution "that in the opinion of this House a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage." The subject matter of the resolution was referred to the Committee on Industrial and International Relations, which in its final report to the House of Commons on June 16, recommended that a conference of provincial and Dominion representatives intimately in touch with labour conditions throughout Canada be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions in the Treaty of Peace. Owing to special circumstances the Dominion-provincial conference recommended by the Committee was not held last year, but the subject is to be discussed at the conference to be held later this year.

Labour legislation in United States in 1926

The United States Bureau of Labour Statistics (Department of Labour) has issued another Bulletin (No. 434) supplementary to the earlier Bulletin No. 370, entitled "Labour Laws of the United States, with Decisions of Court relating thereto." This series of bulletins embodies all labour legislation with the exception of workmen's compensation, the latter subject being dealt with in a separate series of reports. The new Bulletin covers the legislation enacted in 1926. The year's output of labour legislation was comparatively small,

apart from the Railway Labour Act (LABOUR GAZETTE, May, 1926, page 423, etc.) which was passed by Congress in conformity with the terms of an agreement between the employers and employees affected, and a New Jersey statute regulating the issue of injunctions in labour disputes.

The New Jersey Act provides that no writ of injunction may be issued in any case arising out of a dispute concerning terms or conditions of employment "enjoining or restraining any person or persons, either singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labour, or from peaceably and without threats or intimidation recommending, advising or persuading others to do so; or from peaceably and without threats or intimidation being upon any public street or highway or thoroughfare for the purpose of obtaining or communicating information, or to peaceably and without threats or intimidation persuade any person or persons to work or abstain from working, or to employ or to cease to employ any party to a labour dispute, or to peaceably and without threats or intimidation, recommend, advise or persuade others so to do, provided said persons remain separated one from the other at intervals of ten paces or more."

In regard to this statute the report comments that "it goes but a little way, if at all, beyond the court practice in several jurisdictions."

"Principles of labour legislation"

A revised edition of the well-known text-book entitled "Principles of Labour Legislation", by Professor John R. Commons and Dr. John B. Andrews was published lately, incorporating the voluminous legislation that had accumulated since 1920, the date of the previous edition. The book opens with an account of the various laws establishing the fundamental rights of individual workmen. Succeeding chapters trace the legislation which accompanied recent industrial developments, including the formation and growth of labour unions; and finally, an account is given of the large body of laws arising out of the growing sense of public responsibility for the welfare of industrial workers, culminating in recent provisions for "social insurance", a term which includes accident compensation and insurance against sickness, old age, unemployment, etc. The authors point out that the bulk of effective labour legislation is the product of the past fifteen years. "Comparative indifference on the part of society to human welfare in industry has given way to a new and constructive course of social action."

The following enactments are mentioned as the outstanding protective legislation since 1920: federal state co-operation for the vocational rehabilitation of industrial cripples; provision by certain states of increased rates of compensation for juvenile employees who have been injured in the course of their employment; the inclusion of occupational diseases in many compensation laws; the federal Railway Labour Act of 1926," a new and conspicuous experiment in giving legislative encouragement to collective bargaining and voluntary agreement in labour disputes"; old age pension legislation in five states; unemployment insurance and provision for long-range planning of public works, and provision for the rock-dusting of coal mines in four states. It is stated further that, in advance of legislation, successful experiments have been made by industrial plants, and a "most significant development" of unemployment insurance by a joint agreement of employers and trade unions in the clothing industry. (An account of the latter arrangement was given in the LABOUR GAZETTE, September, 1925, page 888).

British Columbia Hours of Work Act, 1923

The Board of Adjustment under the British Columbia Hours of Work Act, 1923, by an order issued in June made a change in the regulations under the act in regard to the exemption of ship-repair plants, engineering works, machine shops, etc., from the operation of the rule limiting the working hours to eight each day or forty-eight each week. The regulations, as revised in 1925, were given in the LABOUR GAZETTE, April, 1925, page 346. The exemptions then included all persons in the industries mentioned engaged in urgent work of a kind that it must be done "in order that other industries shall not be seriously handicapped in their operations." The amended rule is simpler in form, exemptions being allowed in regard to employees "where engaged on emergency repair work only." The regulation now reads as follows: "9. All persons employed in ship-yards, engineering-works, machine-shops, foundries, welding plants, sheet-metal works, belt-works, saw-works, and plants of a similar nature, when engaged on emergency repair-work only, are exempt from the provisions of section 3 of the Act."

Prosecution under Ontario Minimum Wage Act

The first prosecution undertaken by the Ontario Minimum Wage Board resulted in the imposition in the police court at Toronto of a fine of $250 on the head of a braiding firm on June 16. The Minimum Wage Act provides a penalty for non-compliance with any order of the Board not exceeding $500 and not less than $50 for each employee affected, the defaulting employer being ordered also to pay to the employee the difference between the wages actually received and the minimum wage fixed by the Board. In a recent bulletin it was pointed out that the lines drawn by the orders of the Board are not wage rates but wage limits. They protect wages from becoming sub-normal, while leaving the whole region above these lines for the free play of wage-bargaining and the opportunity for promotion. "Most employers", the Board states, "do not need to be forced to pay wages above these lines, and thus an important result of the Board's activity is to protect firms of the better sort from those competitors who would if allowed to do so, cut wages below the line of living costs."

Commenting on the first conviction under the Act, the Toronto *Globe* said: "It is a tribute not only to the Board's methods but to the good sense of employers in the Province that there had been so little difficulty of the kind. Acceptance of the rulings increasing the wages of girls has not by any means been unanimous. Numerous employers have objected to them; some have sought to evade them, and for a time have been able to do so, but when the attention of the Board has been directed to individual circumstances the rulings have been enforced, and collections have been made of overdue pay, amounting in some cases to substantial sums. On the whole, however, the minimum wage has been paid when established, and its reasonableness has been accepted by both employers and employees after discussion in open meetings."

Progress in factory inspection

The Chief Inspector of Factories, Shops and Office Buildings of Ontario, Mr. James T. Burke, in his annual report to the provincial Department of Labour, reviewed on another page of this issue, notes that employers have now come to regard the factory inspectors as collaborators in the promotion of safe and economic management of industry. "There was a time," he says, "when owners and employers looked with certain disfavour on those appointed by the Province to enforce the Factory, Shop and Office Building Act. Many employers could not see at the beginning that what was in the interest of their employees was in their own interest also. Gradually, however, it became clear to them that in safeguarding the life and limb of their employees they were insuring better results for themselves, for the employee who was comfortable and reasonably safe at his work could be counted on to turn out a better grade of work and more in a given time than if he was working in discomfort or in danger of any kind. It took considerable diplomacy to deal with this class of employers. It was necessary to argue with them at length and show them how required changes could be made in their buildings at the smallest possible expense. With few exceptions the day has gone by when the visit of the factory inspector is met with growing opposition. The employer and his employees along with the general public have been enlightened and appreciate practical safeguard reforms."

Workmen's compensation inquiry in Alberta

In accordance with a resolution adopted by the Legislature of Alberta at its last session, the provincial government on June 14, appointed a representative committee to investigate the subject of workmen's compensation in the province. The resolution ordered "that the whole subject of workmen's compensation and the Workmen's Compensation Act be referred to a special committee during the recess with a view to making recommendations at the next session of the Legislature on this subject, said committee to be appointed by the Government and to consist of five representative employers, five representatives of employees and five members of the Legislative Assembly; and further, that the committee may be summoned from time to time during the interim following the present session, and any expense involved in connection with the work of the committee shall be paid by the province."

The committee is composed of the following members:—From the Legislature—Hon. R. G. Reid, J. R. Love, L. Boudreau, C. Y. Weaver, F. J. White.

Employers—R. M. Young and W. S. Campbell, representing the coal industry; Wm. Innes and C. V. Bohannan, representing the manufacturers; A. L. Smith, representing the running trades.

Employees—G. H. Poulton, A. Farmillo, P. M. Simpson, J. E. Gordon and E. Mallabone.

The instructions to the committee are not only to make a survey of the two compensation acts now on the statute books of the province, but also to look into the question of administration for the purpose of making any recommendation thought advisable.

It was explained by Premier Brownlee that in selecting the representatives of the employing and labour interests, it was thought that the coal industry was entitled to two representatives each from employers and employees, by reason of the fact that the total assessment of coal mining under the act is nearly as high as that of all the other forms of industry, while the number of claims in the mining industry form nearly one-half the total number of claims under the Act.

It may be noted that two acts in regard to workmen's compensation are on the statute book of Alberta. The first of these is the "Workmen's Compensation Act, 1908" (Revised Statutes of 1922, chapter 176), its full title being "an Act with respect to Compensation to Workmen for Injuries suffered in the Course of their Employment." This act establishes the liability of employers to their workmen for injuries, the scale and conditions of compensation being set forth in an appended schedule. Compensation under the act of 1908 is recovered by means of court proceedings. The second act is the "Workmen's Compensation Act (Accident Fund)," of 1918 (Revised Statutes of Alberta, 1922, chapter 177), which establishes a common fund formed from assessments levied on employers of labour, and administered by a board, as in the five other provinces having "state" systems of compensation. The running trades of the railways are expressly exempted from the provisions of the act of 1918, and the compensation of this class is therefore governed by the act of 1908.

Miners' consumption and compensation

Early in June representatives of the Mine Workers of Canada held a conference at Toronto with the Hon. Charles McCrea, Minister of Mines of Ontario, and the Hon. Forbes Godfrey, Minister of Health, on the subject of the provisions made under the Ontario Workmen's Compensation Act for silicosis or "miners' consumption." The Union was represented by Messrs. A. M. Stewart, secretary, and George Rubinitz. The Act was amended in 1926 so as to include this disease among the occupational diseases that are compensable under the Act (LABOUR GAZETTE, May, 1926, page 450). Miners who contract silicosis now receive $500, on the condition that they have been actually exposed to silica dust in the course of their employment, in mines in Ontario, for five years previously. The miners proposed that the amount of compensation should be increased to $1,000, and further that the requirement as to five years' employment should be rescinded on the ground that silicosis could be contracted in a much shorter period. The last report of the Workmen's Compensation Board, quoted in the last issue of the LABOUR GAZETTE announced that a Silicosis Board was established early this year, and is now functioning. It was stated that all arrangements in connection with this disease are still of a tentative nature and are subject to further revision as further knowledge of the subject is obtained. The assessments made by the Board against the mine owners for this disease amounted to $200,000 for 1927.

A technical committee of inquiry was appointed in New South Wales in 1924 to investigate the prevalence of silicosis and tuberculosis among stonemasons, quarrymen, sewer miners and rock choppers. This committee completed an examination of 716 workmen engaged in these occupations 123 of whom were found to exhibit silicosis. Of these 123 men, 47 were found to be affected with the first stage, 38 with the second stage, and 38 with silicosis complicated by tuberculosis. In addition, 16 men were found to be suffering from simple pulmonary tuberculosis, i.e., pulmonary tuberculosis uncomplicated by silicosis. In all, 139 men were found to be affected with silicosis, silicosis with tuberculosis, or simple pulmonary tuberculosis. Of these 139 men, 11 had worked for two years or less in silica in the Sydney district, but for relatively long periods elsewhere in mines or at other work in which they had been exposed to silica. Of these eleven men, 4 were found to be affected with the first stage, one with the second stage of silicosis, 4 with silicosis and tuberculosis, and 2 with simple pulmonary tuberculosis. No instance of the disease was found in stonemasons or quarrymen who had worked in silica for ten years, or less. Two men in the sewer miners and rockchoppers' group, who had worked for less than ten years, were found to be suffering from the first stage of silicosis. One, a railway tunneller, had worked for four years as an underground miner at Bendigo and for two and three-quarter years in Sydney sandstone. The other, a sewer miner who had worked for eight years in Sydney only, had worked entirely with drills for three years.

The New South Wales report states that "uncomplicated silicosis is not characteristically a disabling disease in either the first or the second stage. The majority of the men

affected with the first stage of the disease do not complain of any incapacity for carrying on their work, nor do they present any signs indicative of such incapacity. The same may be said of men suffering from the second stage of uncomplicated silicosis. These men, however, are damaged in so far as they are more susceptible to an infection with tuberculosis. Among 123 men affected with silicosis, 38, or 31 per cent, were found to have become tuberculous. Among 593 men unaffected with silicosis, 16, or 2.7 per cent were found to be tuberculous. These figures express the increased risk to which sufferers from uncomplicated silicosis are exposed. When the tubercular complication supervenes, a definite disability soon appears. This disability is bound to appear sooner or later if the tuberculo-silicotic individual continues working at a dusty process in the industry. There is every reason to expect that under such circumstances a fatal termination will eventually ensue as a result of the tuberculosis."

Vocational rehabilitation in Canada and United States

Nova Scotia this year followed the example of Ontario and Manitoba in making provision for the rehabilitation of injured workmen as a branch of workmen's compensation (LABOUR GAZETTE, June, 1927, page 628). The amendment to the Nova Scotia Act was in the same form as in Ontario, save that the limit of expenditure under the new section was fixed at $20,000, instead of $100,000 as in the latter province. It provides as follows: "To aid in getting injured workmen back to work, and to assist in lessening or removing any handicap resulting from their injuries, the board may take such measures and make such expenditures as it may in its discretion deem necessary or expedient, and the expense thereof shall be borne out of the accident fund, and may be collected in the same manner as moneys required to pay compensation or expenses of administration; provided that the total expenditure under the provisions of this section shall not exceed $20,000 in any calendar year."

The Manitoba Act, as amended in 1925, makes more definite provision for the re-training of disabled workmen for occupations suited to their diminished earning power. It enables the Board, "out of the reserve set aside in any individual case to meet compensation provided by this Part, to provide for any injured workman, whose earning capacity in his previous occupation has been permanently impaired by the injury, such vocational training as may be deemed advisable for the purpose of preparing such injured workman for another occupation to which he may seem adapted and which is likely to increase his future earning capacity, and to this end the Board may contract with any institution or institutions furnishing such vocational training and may adopt rules and regulations for this purpose and for the payment of such training, and from time to time the Board may review the compensation previously provided, in view of his earning capacity in his new occupation, taking into consideration all conditions and circumstances at the time of the review."

Some account of the progress made in Canada in vocational re-training, at first in connection with returned soldiers, and later for the benefit of injured civilian workers, was given in the LABOUR GAZETTE, 1924, page 833. With the same object in view, the Employment Service of Canada maintains a "handicap section", for disabled workers in employment. Some account of the work of the handicap section of the Toronto Employment Office was given in the LABOUR GAZETTE, August, 1926, page 782.

The *American Labour Legislation Review* in its March issue gave an account of the progress of vocational rehabilitation in the United States (a note on this subject was given in the LABOUR GAZETTE, August, 1925, page 786). In 1920 Congress enacted the "Fess-Kenyon" law, providing for federal-state co-operation in reclaiming the maimed victims of industry. The provisions of the federal rehabilitation act have now been accepted by 39 States, 38 of which have already set up the machinery and given the necessary financial support. Of these 38 States, 19 have been at the work for 5 years, 9 for five and a half years, three for six years, and the remaining seven for two years or less. The responsibility for the administration of vocational rehabilitation is placed upon the States themselves, the administrative agencies being the respective State boards for vocational education. It has been estimated by students of accident statistics and of the rehabilitation system that every year at least 50,000 additional physically disabled persons require vocational rehabilitation. Under the Federal-State civilian rehabilitation act of 1920, some 24,000 disabled persons have been refitted or retrained and established in self-supporting employment, and at present in the 38 states operating under the act approximately 14,000 persons are being rehabilitated. The federal government's principal part in the rehabilitation program is to stimulate rehabilitation work in the states through financial aid. In 1926, the 38 co-operating

states expended $578,847 of federal money and $695,038 of state money. The same year fifteen of these states spent practically all of their national allotments. Separate funds have been provided by several states to maintain disabled persons during training. Provision for maintenance in certain cases is included in compensation acts. When such provision is made the law allows the disabled person supplementary compensation during training. In other states the funds for maintenance are applied to a very considerable extent to non-industrial cases.

Workers' safety movement in U.S.A.

The first National Labour Health Conference was held at Cleveland, Ohio, in June, under the auspices of the Workers' Health Bureau. James H. Maurer, president of the Pennsylvania Federation of Labour, stated that the time had come for workmen themselves to take a hand in reducing the number of industrial accidents. The protection of workmen should no longer be left exclusively to the government and the employers. At present, he said, one worker was killed on the job in the United States every twenty-five minutes throughout the year, and one was injured every fifteen seconds.

The conference adopted a progressive program for protection of the 56 shop trades in the American Federation of Labour against industrial poisons and plans for protecting the lives of the building trades workers, 2,000 of whom are killed annually and fifty times that number injured.

A safety program for American mines, which kill more miners than any other great industrial country of the world, was also approved. Delegates from various miners' local unions in both the hard and soft coal fields united in asserting that the measures urged by the Workers' Health Bureau would save most of the 2,500 miners killed and 130,000 injured yearly in the United States.

A second conference will be held in 1928, when progress will be reported in connection with the safety program adopted this year.

Trade unions and copartnership

A correspondent of the *Economist* (London) outlines in the issue of June 4 a plan adopted by the Bradford Dyers' Association, Limited, for the purpose of securing for the employees an equitable share in the profits of the industry. In numerous recent publications culminating in the report of the delegation of British employers and trade union leaders to Canada and the United States, the attention of labour has been directed to the greatly extended ownership of industrial capital by trade unions and their members in the United States. The writer mentions several British schemes of joint ownership, including recent efforts by the Southern Railway, the London Midland and Scottish and Nobel Industries, Limited, and proceeds:

"Up to this point, however, the trade unions generally have shown little interest or enthusiasm; the great majority of their members still believe that the development of such a system will sooner or later undermine their freedom in collective bargaining. Mainly for that reason more value may attach to the plan of the Bradford Dyers' Association, Limited, which has apparently been again discussed in detail with representative labour leaders. Its attraction lies partly in the advanced labour policy of the association, which is based on the complete recognition of and co-operation with trade unionism. Under the employees' bonus register, as it is called, assistance is given in the form of loans to employees who wish to acquire shares in the association. Provided the association pays not less than 5 per cent dividend on the ordinary shares, the employee investing in ordinary shares receives a bonus equal to the amount of the dividend, i.e., he receives twice the dividend payable to an ordinary shareholder who is not on the employees' bonus register. An employee whose salary does not exceed £500 per annum may invest in preference shares and have them put on the bonus register. In this case the bonus is 16 shillings for every one per cent dividend on the ordinary shares. The holder of preference shares thus receives the preference dividend and a bonus equal to four-fifths of the ordinary dividend. Under this arrangement share capital to the extent of over £650,000 is now held by employees. At the recent annual meeting of the association a resolution was passed to increase the limit of shares on the employees' bonus register from 700,000 to 800,000.

"The directors have reviewed their system of payment by results, their employees' bonus register, their superannuation funds, and other mutual arrangements, but they recognize that there is still doubt as to whether, in this case, there is equitable division of the product of industry; and, presumably, the inquiries which have been made are designed to ascertain what is the proper rate of interest to be expected on money provided for the industry in question. If that were agreed, it is believed that no substantial difficulty

should attend a scheme of allocation advantageous to all connected with the trade. Important as the schemes connected with the railway amalgamations and the dyeing industry are, they have at this stage covered only a small proportion of the workers; and they have received quite inadequate consideration by the trade unions. But if the penetration of industry on this basis, similar to American policy, is to be undertaken, the devices in question have certainly very great possibilities."

Distribution of employee stock ownership

The *American Economic Review* contains in its issue for June, 1927, a communication by Willard D. Fisher, which raises the question whether employee stock ownership in any real sense of the term prevails on this continent to the extent that has been suggested in announcements made from time to time in the press. It has been stated that scores of large corporations have promoted the sale of their stock to their employees, and that numerous smaller companies have done the same thing. "The purchasing employees are shown by tens of thousands for single corporations, and by hundreds of thousands in their total. They hold some hundreds of thousands of shares. And their holdings sum up to several hundred millions of dollars, possibly a billion in all. Such figures come, directly or indirectly, from the corporation offices; and there is no reason to doubt their accuracy. . . But there are plenty of reasons why they do not go so far as has been alleged toward making the labourer a capitalist and master of American corporations. Nor do they reveal any industrial or social revolution, or portend one. When reduced from their impressive totals, and when placed in comparison with other relevant figures, they have a very different significance. Then they show some four or five per cent of American industrial employees owning, or setting out to own, something like five per cent of the shares of the companies for which they work, with half of these, perhaps, voting shares. But there are misunderstandings as to the meaning of 'employee' in this connection which appear even among well-informed persons. Nearly everybody naturally thinks of employees as labourers, even as common labourers of the rank and file. And there are declarations of those who see so much in the recent extension of employee owenrship which tend to confirm the popular misunderstanding, and even appear as if designed to do so. For in nearly all of the plans for the promotion of employee ownership, the employees who are offered the stock include all, from the unskilled labourer up through foremen, superintendents, managers, and the rest, on up to general officers and the president himself. Manifestedly it is important to know what grades of employees are the owners and subscribers. The importance is so obviously great that it need not be enlarged upon here. Yet the corporations publish no information as to this distinction."

Co-operative congress in Great Britain

The 59th annual congress of delegates from co-operative societies in the United Kingdom was held at Cheltenham in June, and was attended by about 1,630 delegates, representing 566 societies. There were also representatives from various other bodies in the United Kingdom and from co-operative organizations in Belgium, France, Germany, Poland, Russia, Sweden and Ukraine. The congress was convened by the Co-operative Union of Great Britain and Ireland, a federation of about 1,300 societies, with an aggregate membership of 4,850,000.

Among the important measures taken by the congress was a resolution, passed on a card vote of 1,960 to 1,943, accepting the agreement reached between the National Executive of the Labour Party, and affirming "that the agreement provides the basis of an amicable understanding between the two movements." The agreement in question is one designed to secure co-operation for political purposes between the two national executives, and to avoid the possibility of the two parties opposing each other in the constituencies; it is optional upon local co-operative and labour parties.

A resolution was passed unanimously declaring "that this congress renews its greetings of friendship to Russian co-operators, and urges all sections of the co-operative movement to maintain and develop trading relations with the Russian co-operative movement, and to work for the full renewal of peaceful relations with that country."

All societies affiliated to the Co-operative Union were advised by the congress to establish joint advisory councils, composd of representatives of their management committee and their employees, as approved by the congress in 1925.

Farm labourers' village in Saskatchewan

The Regina *Leader,* in its issue of June 25, stated that the Jewish Colonization Association was about to establish a farm labourers' hamlet with a view to solving the problem of placing married

couples on farms. The association proposed to establish a farm labourers' hamlet on a quarter section in the Sonnenfeld colony, south-west of Bromhead. The quarter section, it was stated, will be divided into four 40 acre holdings, each of which will be subdivided into pasture, seed, feed and garden lots. The pasturage wil be sufficient for four or five milch cows and two horses. While the father of the family works out on neighbouring farms, the mother and family will look after the work on the holding. As soon as the family has acquired sufficient capital and the necessary experience of Canadian farming methods they will take up their own farm and their place on the small holding will be taken by another married couple. It is hoped the scheme will provide a solution to the married couples for this recurring problem. Four farm labourers and their families are being settled on the land under this scheme in 1927.

Notice of the incorporation, under the Ontario Companies Act, of the "Canadian Brotherhood of Chauffeurs and Mechanics," was published in the *Ontario Gazette*, June 11.

The fourteenth annual report of the Director of Child Welfare of Nova Scotia recommends that restrictions should be imposed on children engaged in street trades. "The time has certainly come," it is stated, "when boys under fourteen years of age should be prohibited from engaging in these trades unless for certain hours under license."

The Workers' Co-operative of Northern Ontario was lately opened at Timmins, Ontario, under the auspices of the Communist Party of Canada. According to figures in the *Toronto Worker* the total authorized capital of the concern is $14,000, but only 400 ten-dollar shares were sold to start the store. The business for May totalled $21,390. Control is directly in the hands of the shareholders, and the management committee elected in general shareholders' meetings. Each shareholder is entitled to one vote only, regardless of the number of shares held, and not more than six per cent per annum is to be paid as dividends. An amount equal to five per cent of the capitalization is to be expended on educational work, and distributions to consumers include both members (shareholders) and non-members. It is hoped that a co-operative restaurant will be opened soon in connection with the store.

The Canadian Federation of the Blind, at a recent convention, passed a resolution in favour of the fixing of a minimum wage for the blind. The delegates from Toronto alleged that persons desiring to purchase the products of blind workers could not always feel certain that the goods they received were really made by the blind, and the convention went on record as favouring the principle that the production of goods of this class should be strictly limited to blind workers. The convention also adopted a recommendation that a petition asking that the Dominion of Canada follow the lead of Great Britain, the United States, Australia and New Zealand, and grant pensions to the blind should be presented to the Prime Minister.

The Ontario Safety League has addressed a circular letter to parents in the province appealing for their co-operation in a special effort to reduce the number of serious accidents. In Ontario, during 1926, there were 12,792 preventable accidents. Fourteen hundred and fifty-one of these were fatalities. Fourteen hundred and fifty-one lives lost from some thirty-six different hazards. About one-third of these victims were children under 16 years of age. Automotive vehicles, drownings, falls, railroads, fires, burns and scalds, asphyxia, horse-drawn vehicles, firearms and falling objects are given as some of the principal causes.

The National Deposit Friendly Society of Great Britain recently rejected a proposal to bring women into the same class for benefit as men. The proposal to amend the existing rule was made by the Liverpool branch, and was that women be admitted to class A, which is only available for male members in good health not having an heriditary complaint in their family and not following an unhealthy or hazardous occupation. The proposed change was opposed on the ground that in the recent valuation report of national health insurance the Government actuary said the sickness and disablement claims of women were 40 per cent higher than those of men. It was pointed out that in the Society in 1926 the average sickness payment to female members was 23 shillings, while the average payment to male members was 17 shillings, sixpence, though the sickness benefit paid was three shillings a week more than that paid to women. The cost of sickness of their women members was at least 33 per cent higher than that paid to men.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of June was reported by the superintendents of the Employment Service of Canada to be as follows:—

Although work on the land had been delayed by the weather in the Province of Nova Scotia, the agricultural industry was active. In the logging group calls for workers were chiefly from the pulpwood cutting industry. The production at the coal mines remained favourable and those engaged in and around the mines were experiencing rather complete employment. Fair catches were reported as being taken by the fishing industry. Construction activity at Halifax and New Glasgow was fair, but elsewhere rather quiet. With the exception of the iron and steel group, in which activity was rather dull, the manufacturing industries appeared to be normal. Transportation and trade were both commented upon as being fair.

The agricultural industry in New Brunswick was likewise very active. The fishing industry reported fair activity. In this province there was not a very large quantity of work being carried on in the logging industry, and consequently demands were light. The manufacturing industry was normally favourable. Building and construction programs underway were not very extensive. The conditions of trade and transportation were good.

Farm workers were in brisk demand at the employment offices in Quebec. The logging industry was seasonally quiet. The manufacturing industries were maintaining a favourable level of activity, particularly at Montreal, Three Rivers and Sherbrooke. Throughout the whole province construction was very active, with most building tradesmen regularly engaged. Transportation and trade were both stated to be fair, with improvements noticeable. The tourist traffic was heavy, thereby assisting certain lines of activity.

With several offices in the Province of Ontario reporting increased demands for farm workers, vacancies in the agricultural industry were quite numerous. Although the manufacturing industries were not taking on additional workers in any large numbers, factories, generally speaking, were operating at a satisfactory level. At Oshawa the automobile industry and related industries showed a seasonal slackness. Building and construction in this province as in Quebec were very active, with additional workers being taken on in several districts; in Toronto this industry was apparently exceptionally active. While no real shortage of building tradesmen exists employment seemed to be at a very high level. From the northern portion of the province it was stated that metal mines were normally active, while good demands for bush workers were being registered at the employment offices. The demands for domestic workers once more were in excess of applicants at several points in the province.

With crop prospects in Manitoba favourable, fair demands for farm workers and plenty of applicants were reported. The construction industry was rather quiet; although manufacturing in Winnipeg was normally active no vacancies for workers were being notified. Logging placements from this city were at a minimum, as might be expected at this particular time of the year. Employment for casual labourers was fair, but the number of applicants exceeded the number of vacancies. With some local shortages reported, the demands for women domestics were very brisk.

From Saskatchewan fair demands for farm workers with applicants, generally speaking, equal to the demands, were reported, though a couple of offices reported shortages. The construction industry showed fair activity. Other than the agricultural and construction industries very little work of any extended duration was offering; casual jobs were, however, fairly plentiful, although applicants for such work exceeded openings. The usual shortages of female domestic workers were reported.

Toward the end of the month rain interfered with farm operations in Alberta, although the moisture was of great value to the crops; the demands for workers consequently were likewise interfered with, but applicants did not seem to be of any noticeable surplus. Calgary and Edmonton reported construction as rather good, while other centres reported activity in this industry as fair. Coal mining was at a low ebb, but an early opening of the mines was anticipated There was not a great demand for women domestics in this province, although no surplus of applicants was apparent.

The logging industry in British Columbia continued to be rather quiet with only minor demands for workers. Construction activity was at a fairly satisfactory level throughout the province. With normal activity in the mining industry, there were very few vacancies for additional workers. Manufacturing lines were reasonably active. Demands for women workers were increasing in number.

Generally speaking, employment conditions in the Coast Province were rather favourable, although a surplus of labour in some parts was still reported.

EMPLOYERS' REPORTS.

Employment at the beginning of June showed a further pronounced gain that made the situation more favourable than in any other month since 1920. Statistics were received by the Dominion Bureau of Statistics from 6,150 firms employing 876,768 workers, as compared with 832,872 on May 1. Reflecting this gain, the index number rose from 100.6 in the preceding month to 105.9 on June 1, as compared with 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6 on the corresponding date of 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These index numbers have January, 1920, as the base, equal to 100.

Expansion was noted in the five economic areas, Quebec firms adding the largest number

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending July 2, 1927, and corresponding previous records. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

of extra employees to their staffs. In the Maritime Provinces, further improvement was noted, particularly in the manufacture of lumber, fish and pulp and paper products and in construction, while logging and transportation were seasonally slacker. Employment was in greater volume than on June 1 last year. In Quebec, transportation, construction, manufacturing and logging reported pronounced increases in personnel, but smaller gains were shown in mining and trade. The situation was better than on the corresponding date in any of the last six years. In Ontario, construction, manufacturing, transportation and mining registered the greatest expansion, while logging and trade were seasonally quiet. The index number was higher than at any other month of the years since 1920. In the Prairie Provinces, the most marked improvement was in construction, transportation, manufacturing and services; employment was more active than on June 1, 1926. In British Columbia, construction, manufacturing and transportation recorded the most noteworthy advances, but the tendency generally was upward. In this province also, the index number was higher than in any other year since the record was instituted in 1920.

Seven of the eight cities for which separate compilations are made showed an upward movement; Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver reported considerable gains, while moderate declines were noted in Windsor and the Other Border Cities. In Montreal, transportation, construction and trade recorded the greatest increases, but manufacturing as a whole was slightly slacker. In Quebec, construction and transportation registered continued gains, while manufacturing showed a falling off. In Toronto, manufactures were somewhat busier, and considerable improvement was shown in construction. In Ottawa, manufacturing, construction and transportation recorded heightened activity. In Hamilton, there were additions to staffs on practically the same scale as on the corresponding date in 1926. Most of the expansion took place in manufacturing, notably in iron and steel plants, but other industries were also busier. In Windsor and the Other Border Cities, curtailment was registered in automobile factories, but construction showed heightened activity. In Winnipeg, the greatest improvement took place in construction; manufacturing was also busier, while there was a moderate reduction in trade. In Vancouver, construction and transportation reported the bulk of the gain, but manufacturing was rather slacker, chiefly in the lumber and iron and steel groups.

Unusually large increases were reported in manufacturing, in which the greatest increases were in lumber mills and in fish-preserving, pulp and paper, vegetable food, building material, rubber, electric current and some other groups. On the other hand, iron and steel and textile plants were seasonally dull. Transportation, logging, construction and maintenance and services also reported marked increases in the number employed, while trade on the whole, was slightly more active. The situation in the majority of these industries was considerably better than on the corresponding date last year, or of most of the earlier years of the record, which was instituted in 1920.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June.

TRADE UNION REPORTS.

The situation among local trade unions at the end of May as was indicated by the returns tabulated from 1,576 local trade unions with 163,754 members was slightly better than that reported at the close of the previous month, 5.2 per cent of the members being without work on the last day of May as compared with an unemployment percentage of 6.0 at the end of April. Improvement was registered in all provinces except Nova Scotia and British Columbia where slight reductions occurred. The level of employment was slightly lower than in May last year when 4.9 per cent of the members reported were unemployed. In this comparison the reductions in Nova Scotia, Ontario, Manitoba and British Columbia were sufficient to slightly more than offset the gains in employment in the remaining provinces, though the changes in all provinces were small.

An article elsewhere in this issue gives in more detail a summary of the conditions among local trade unions at the end of May.

EMPLOYMENT OFFICE REPORTS.

Reports from the offices of the Employment Service of Canada during the month of May, 1927, recorded 33,632 references to positions and effected a total of 32,249 placements. Of these the placements in regular employment were 21,526, of which 17,785 were of men and 3,741 of women. Placements in casual work totalled 10,723. Employers notified the Service of 35,604 opportunities for employment, of which 24,885 were for men and 10,719 were for women. The number of applicants for work was 44,052, of whom 32,546 were men and 11,506 women. A nominal increase was registered in the volume of business trans-

acted when a comparison was made with the preceding month, while a decline of minor importance was shown in the comparison with May of last year, the records for April, 1927, showing 33,199 vacancies offered, 41,077 applications made, and 29,949 placements effected while in May, 1926, there were recorded 36,966 vacancies, 43,209 applicants for work, and 33,655 placements in regular and casual employment. A report in detail of the work of the offices for the month of May, 1927, will be found elsewhere in this issue.

Production in Certain Industries.

Some figures indicating the recent movement of trade and industry are given in the table on page 707.

The Dominion Bureau of Statistics reported that the weighted index of the volume of manufacturing, adjusted for seasonal tendencies, indicated that the level of production in March and April was considerably above that of the preceding seventeen months. It is pointed out that the index showed a new stage of expansion in October, 1925, which was well maintained until February last. In March and April another stage of expansion was shown, the index indicating an increase of more than sixty per cent over the base period. The primary iron and steel industry, which is subject to great fluctuations, accounted for a portion of the increase in recent months. The production of newsprint reached the highest total in history through the opening of new mills and the adding of new machines to several old plants. The output of the automobile industry reached a new high total in April, followed by some recession in May. The production of cars and trucks in May was 25,708, compared with 31,811 in April. The index of employment in the larger manufacturing industries stood at 98.8 on June 1, 1927, as compared with 93.9 and 88.3 on the same dates of 1926 and 1925 respectively.

Production of pig iron in Canada amounted to 78,987 long tons in May, an advance of 2 per cent over the 77,240 tons of April, and 9 per cent above the output of 72,762 tons reported for May a year ago. Output of foundry iron rose to 14,902 tons from 11,250 tons in the previous month; basic iron fell off slightly to 64,085 tons from 64,239 tons, while no malleable iron was produced in May as compared with 1,751 tons in April. For the five months ending May the cumulative production of pig iron in Canada totalled 334,276 tons, an increase of 11 per cent over the 300,010 tons produced during the first five months of 1926. As no additional furnaces were blown in during the month and none were blown out or banked the same six furnaces were in blast on May 31 as at April 30. Active furnaces in May having a daily capacity of 2,375 long tons per day or 47 per cent of the total capacity of all blast furnaces in Canada were located at the following points: 2 at Sydney, N.S.; 2 at Hamilton, Ont.,; and 2 at Sault Ste. Marie, Ont. Figures for the production of ferro-alloys are incomplete, but the records show that for the first five months of this year the output totalled 20,555 tons and consisted of two grades, one having a high manganese content and the other 50 per cent or less silicon. The production of steel ingots and direct steel castings during May amounted to 96,711 long tons, a decline of 11 per cent from the 109,107 tons of April but 8 per cent over the 89,513 tons produced in May last year.

Coal Production.—Full statistics of coal production during May are not yet available. The output of coal from Canadian mines during April decreased 7 per cent from the production for the preceding month, but was 45 per cent greater than the average for April in the past five years. The figures were 1,312,875 tons in April as against 1,406,361 tons in March and an average of 907,238 tons during the five preceding years. The number of men employed in the coal mines of Canada, working underground and on surface respectively, during April, 1927, were, by provinces, as follows:—Nova Scotia, 10,902 underground, and 2,300 surface, as compared with 10,974 underground and 2,345 surface, for March, 1927; Alberta, 5,024 underground and 1,942 surface, as compared with 6,333 underground and 2,254 surface for March, 1927; British Columbia, 3,488 underground and 1,550 surface, as compared with 3,553 underground and 1,550 surface for March, 1927; New Brunswick, 439 underground and 113 surface, as compared with 479 underground and 121 surface in March, 1927, and Saskatchewan, 239 underground and 77 surface as compared with 374 underground and 94 surface for March, 1927, making a total for April, of 26,074 of whom 20,092 worked underground and 5,982 on surface, in comparison with 28,077 in the previous month, of whom 21,713 worked underground and 6,364 worked on surface. During April the production per man per day was 2.5 tons, as against 2.4 tons in March. The tonnage lost was largely due to "lack of orders."

Building Permits and Contracts Awarded.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of May, 1927,

amounted to $20,532,147, as compared with $17,587,536 in the preceding month, and with $18,504,296 in May, 1926.

The *McLean Building Review* estimates the total value of the construction contracts awarded in Canada in June, 1927, at $52,228,600. Of this amount $19,278,300 was for business building; $13,800,600 for residential building; $11,666,700 for engineering construction, and $7,483,000 for industrial construction.

The apportionment of contracts awarded by provinces during June, 1927, was: Ontario, $20,654,800; Quebec, $16,593,400; the Prairie Provinces, $10,110,600; British Columbia, $2,873,000 and the Maritime Provinces, $1,996,800.

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in May, 1927, the merchandise entered for consumption amounted to $94,412,439, as compared with $74,297,628 in April, and with $86,052,253 in May, 1926. The domestic merchandise exported amounted to $109,782,591 in May, 1927, as compared with $77,337,964, and $91,339,823 in May, 1926.

The chief imports in May, 1927, were: Iron and its products products, $26,634,722, and fibres, textiles and textile products, $13,22,382.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $52,179,079, and wood, wood products and paper, $23,409,831.

In the two months ending May, 1927, exports of agricultural and vegetable products, mainly foods, were valued at $85,894,231, and wood, wood products and paper at $40,251,872.

Strikes and Lockouts

The time loss due to industrial disputes in June, 1927, was less than during May, 1927, and less than during June, 1926. There were in existence during the month sixteen disputes, involving 1,751 workpeople, and resulting in a time loss of 16,139 working days as compared with seventeen disputes in May, involving 4,772 workpeople and resulting in a time loss of 20,766 working days. In June, 1926, there were on record fifteen strikes, involving 2,881 workpeople and resulting in a time loss of 35,769 working days. Five of the strikes and lockouts commencing prior to June terminated during the month and two of the strikes and lockouts reported as commencing during the month also terminated during June. At the end of June, therefore, there were on record nine strikes and lockouts, affecting 260 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $10.86 at the beginning of June, as compared with $10.76 for May; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; 11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. Besides a substantial increase in the price of potatoes less important advances occurred in the prices of beef, veal, eggs and flour. The prices of butter, milk, cheese, mutton, pork, bacon and lard were lower. Including the cost of fuel and rent with that of foods the total budget averaged $21.04 at the beginning of June, as compared with $20.95 for May; $21.31 for June; 1926; $20.67 for June, 1925; $20.22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.81 for June, 1920; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June 1914. Fuel was again slightly lower, due to lower prices for coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics again advanced, being 153.5 for June, as compared with 151.9 for May; 155.6 for June, 1926; 158.6 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak); 201.7 for June, 1919; and 196.0 for June, 1918. In the classification according to chief component materials the Vegetables and their Products group advanced, higher prices for grains, flour, potatoes and some fruits more than offsetting lower prices for coffee, tea, raw sugar, rosin, hay and straw. The Fibres, Textiles and Textile Products group also advanced due mainly to higher prices for cotton and some cotton products. The groups which declined were: the Animals and their Products group, due to lower prices for live stock, pork products, mutton and butter, which more than offset advances in the prices of hides, leather, boots, shoes and beef; the Non-Ferrous Metals and their Products group, due to lower prices for copper, copper products and brass sheets, which more than offset advances in the prices of lead, tin, silver and spelter; the Non-Metallic Minerals group, due mainly to lower prices for gasoline; and the Chemicals and Allied Products group, due to declines in the prices of white lead and glycerine. The Wood and Wood Products group and the Iron and its Products group were practically stationary.

LABOUR LEGISLATION IN ALBERTA IN 1927

THE Alberta Legislature, at its last session which opened on February 10 and closed on April 2, 1927, amended a number of laws affecting labour, including the Workmen's Compensation Act (Accident Fund), the Boilers Act, the Factories Act, the Mines Act and the Mothers' Allowances Act.

Workmen's Compensation

The Workmen's Compensation Act (Accident Fund) was amended to provide that where the Board deems it advisable to furnish better or further education to any child it may extend the period during which compensation is payable to such child beyond the age of sixteen years, but in no case beyond the age of eighteen years. Provision is made that the Board may recover sums due by an employer by filing a certificate with the clerk of the Supreme Court or of a District Court instead of by action as formerly. Provision is also made for the payment, as from the first day of April, 1927, of lump sums or periodical payments or both to any workman who, since June 30, 1921, has been seriously and permanently disfigured about the face or head or otherwise permanently injured. A further amendment raises the maximum amount of compensation payable in any case from $1,140 per annum to $1,250 per annum.

Boilers Act

The Boilers Act was amended to provide that owners of boilers of less than 50 horse-power only shall be exempt from payment of an inspection fee on account of having paid the annual license fee. The fee for inspection of a boiler of 50 horse-power or more on which a license fee has been paid will be the excess of the inspection fee over the license fee. All boilers carrying a working pressure of twenty pounds or more must be in the continuous charge of an engineer or fireman holding a certificate under the Act. The Bureau of Labour is charged with the administration of this Act.

Factories Act

An amendment to the Factories Act, which will come into force on proclamation of the Lieutenant-Governor in Council, brings oil and gas well-drilling plants and rigs within the scope of the Act. This amendment carries out a suggestion contained in the report of the Commission to investigate the subject of the 48-hour working week in factories, shops and offices, which was presented during the session. The Commission heard representatives from the oil well-drillers working in the Turner Valley field, who stated that they were working on a 12-hour shift, and that except in extremely cold weather, when they are not required to work, their work is continuous. The Commission considered that the case might be met by an amendment to the Factories Act. The report of the Commission was given in full in the LABOUR GAZETTE for April, 1927, at page 385.

Mines Act

A number of changes were made in the Mines Act. From September 30, 1927, no person may be employed at the working face unless he holds a certificate of competency as a coal miner. A section was added which provides for the appointment of district boards of examiners, consisting of a district inspector, a mine manager or overman, and a working miner, to examine candidates for coal miners' certificates. No person is eligible to receive a certificate unless he is at least eighteen years of age and has been employed in some capacity underground for at least one year prior to making his application. Any person who was employed at the working face on May 1, 1927, or had been so employed at any time within the twelve months immediately preceding that date, will be deemed to have been employed in some capacity underground for at least one year, provided he submits himself for examination not later than December 31, 1927. A provisional certificate for a period not exceeding sixty days may be granted by the inspector of mines to any person who has the necessary qualifications of a candidate for examination. Authority is given for the granting by the chief inspector to the holder of a third-class certificate of a provisional certificate permitting him to act as overman in a mine in which not more than ten persons are employed underground. The mine in which he is to act must be specified in the certificate, which may be issued for a period ending not later than sixty days after the next examination. In the case of a mine employing not more than five persons underground, the chief inspector may grant a provisional certificate to any person who has had at least five years' experience underground, authorizing him to act as overman for the time and in the mine specified in the certificate. A further amendment repeals the clause in the Mines Act which allowed the granting of provisional certificates to persons to act as shot-lighters or mine examiners in mines

where locked safety lamps are required to be used. The section which authorized the granting of a provisional certificate as overman to any person having five years' practical experience was struck out, as was also the provision that, in mines in which less than thirty persons are employed, permission might be given by the Minister to place operations underground in charge of a competent person known to the chief inspector. Such operation must be in charge of a person holding a second-class certificate. No mine manager may be in control of more than two mines and may only be manager of two when these are not more than two miles apart. The chief inspector may, however, authorize a mine manager to control two mines more than two miles apart provided they belong to the same owner.

Rules are laid down to govern the appointment of a check-weigher, which is to be made by the persons employed at the mine whose wages are based upon the weight of mineral gotten by them, attending a meeting called upon at least forty-eight hours' notice. The meeting must remain open, for the purpose of receiving nominations, for at least thirty minutes after being called to order, and all nominations must be in writing. If more than one nomination is made, an election is to be held by secret ballot at the mine on the third working day after the meeting. A person who is or has been a practical working miner may be chosen as check-weigher. In the event of any dispute as to the regularity of an election, the chief inspector may by order declare the election to be void and direct another election to be held which he may supervise. Requests that the wages of a check-weigher be paid from the offices of the mine may be made by a committee of two appointed at a meeting of the miners who have engaged the check-weigher. A person who is or has been a practical working miner may be appointed as checker provided he has the necessary three years' experience and is a resident of the province. The appointment of the checker is to be made in the same manner as that of the check-weigher. Provision is made for the appointment of deputy district inspectors. Persons appointed to this office must hold first-class certificates. In all mines where locked safety lamps are required to be used, gas detector readings or observations must be taken daily with an approved gas detector in the return airways of each district, or split at a point, not more than one hundred feet from the last working place therein and a record of such readings or observations made in a book to be kept for the purpose and signed by the person making the reading or observation. Inspection in mines where gas has been found within the preceding twelve months must now be made within three hours of the time each shift commences work, instead of within four hours of that time as formerly. The clause which provided that, for the purpose of the above-mentioned inspection, two or more shifts succeeding one another should be deemed to be one shift, is repealed.

Locked safety lamps used in examinations required by the Act must be of a flame type. Where safety lamps are used at a mine, one or more persons are to be appointed by the owner, agent or manager to see that such lamps are kept cleaned and in good order; formerly this rule only applied where forty or more lamps were used. The clause which provided that not more than one shot should be fired at one time in a working face in coal unless the shot were fired by electricity, was replaced by a clause providing that not more than one shot may be fired at any one time except in tunnels, shafts and slopes whilst being driven in rock. Signals and guides in shafts of a depth greater than fifty feet and signals on underground planes must now be provided in all cases, the provision for written exemption by the chief inspector having been repealed.

Mothers' Allowance Act

The Mothers' Allowance Act was amended to provide that a woman to whom an allowance is granted whilst a resident of a municipality shall be deemed to be a resident of that municipality so long as she remains in the province. A woman who was in receipt of an allowance on April 1, 1926, is, so long as she remains in the province, deemed to be a resident of the municipality in which she resided immediately before that date.

Theatres Act

A new Theatres Act was passed and provides that operators of cinematographs and similar machines must pass an examination as to competency and pay a license fee of ten dollars. The Lieutenant-Governor in Council may make regulations prescribing, among other things, the subjects of examination for projectionists or operators of moving picture machines, the conditions of admission to such examinations, the division of such licenses into classes and the work which may be performed by members of each class and the places where such work may be performed.

Teachers' Arbitration Board

The section of the Schools Act dealing with the Board of Reference was amended to provide that the Board may require the attend-

ance of witnesses and the production of documents, not only when acting as a board of arbitration but also in other cases.

Early Closing of Stores, Etc.

The revised and consolidated Town Act which will come into force on proclamation of the Lieutenant-Governor in Council provides that town councils may pass by-laws requiring that during the whole or any part of the year any class of shops shall be closed on any one day of the week after 12 o'clock noon, or such later hour as may be deemed advisable. After closing hours, however, chemists and druggists may sell medicines, etc., and other shops may supply articles necessary on account of emergencies arising from sickness or death. A shop includes a barber shop or a hairdressing or beauty parlor, but not a tobacconist's shop, news agency, hotel, inn, victualling or refreshment house. The Act also authorizes town councils to pass by-laws regulating licensing and controlling employment or intelligence offices or agents. The clause of the old Act which required employers to furnish the names of their employees to assessors is also embodied in the new Act.

Old Age Pensions

During the session the Legislature passed a resolution dealing with old age pensions. As originally introduced the resolution proposed the introduction by the Government of an old age pension bill which should be complementary to the Old Age Pension Bill then before the Parliament of Canada. The resolution was amended, and, as passed, it urged upon the Dominion Government the necessity for a purely federal plan in order to provide adequately for old age pensions throughout the Dominion. An account of the debate on this resolution was given in the LABOUR GAZETTE for March, 1927, at page 245.

Dominion-Provincial Conference

Another resolution which came before the House dealt with the proposed conference between representatives of the Federal and Provincial governments. The resolution suggested the desirability of discussing at the conference certain subjects, including the necessity for sickness, invalid and unemployment insurance, and the steps required to secure early and effective legislation in respect thereof. During the debate amendments were proposed which would have added other subjects for discussion, including consideration of the Old Age Pensions Scheme; a national coal policy; reinstatement of the right of peaceful picketing; continuation of technical school grants; the desirability of co-operation between the Dominion and the province with respect to immigration with a view to avoiding the flooding of the labour market; and the question of joint industrial councils. The resolution and amendments were discussed at some length after which the debate was adjourned, no vote being taken.

Compensation Commission

Pursuant to a further resolution passed during the session, a Special Committee of fifteen members was appointed to consider the subject of workmen's compensation and report at the next session. The committee consists of five members of the Legislative Assembly, and five representatives each of employers and employees.

Proposed Railway Shop Agreement

A resolution, which was withdrawn after debate, would have instructed the Government "to enter into an agreement with the authorized representatives of its railway shop employees making applicable, in its entirety, wage agreement No. 6 and all supplements thereto, as agreed upon between the Railway Association of Canada and Division No. 4 of the Railway Employees' Department of the American Federation of Labour and covering all other railway properties in Canada."

At a joint session of the Ontario Municipal Electric Association and the Association of Municipal Electric Utilities, held at Niagara Falls on June 25 the pension and insurance committee of these organizations was instructed to make the necessary arrangements to enable municipal commissions to take advantage of the recent legislation authorizing provision of pensions and insurance for employees of municipal Hydro-Electric systems. The legislation referred to was passed at the last session of the Ontario Legislature (LABOUR GAZETTE, June, 1927, page 628). It enables the Ontario Hydro-Electric Power Commission, with the consent of the municipal authorities concerned, to contract with an insurance corporation for the insurance of municipal employees by way of service annuities, income annuities, death or disability benefits, etc.

REPORTS OF DEPARTMENTS OF LABOUR OF ONTARIO AND ALBERTA FOR 1926

Ontario

THE seventh annual report of the Department of Labour of Ontario, recently published, describes the condition of labour and industries in the province during the fiscal year ending October 31, 1926. It outlines also the work carried on under the various Acts administered by the Department, including the Factory, Shop and Office Building Act, the Stationary and Hoisting Engineers' Act; the Steam Boilers' Act; and the Employment Agencies Act. The activities of the Ontario Government offices of the Employment Service of Canada are also described.

Factory Inspection.—A large section of the report describes the work of the Factory Inspection Branch. The records show an expansion in the volume of work during the fiscal year; 18,419 visits of inspection were made by members of the Factory Inspectorate in the discharge of their duties in connection with the regulation of accident prevention, hours and conditions of employment of females and youths; health; sanitation; fire prevention and other matters pertaining to the general welfare of employees. In the firms visited, 276,649 persons were employed, an increase of 16,377 over the number for the previous year, and 1,140 permits were issued, or 367 more than last year. The great majority of these were overtime and contract clothing permits. The increases in the number of permits and of employees reported in the firms inspected is taken as indicating a gradual return to normal conditions in the province. The following table shows the number of employees by sex and age in 1925 and 1926:—

Employees	1926	1925
Males over 16	200,241	188,040
Males 14-16	459	541
Females over 18	72,564	69,352
Females 14-18	3,321	2,315
Children under 14 dismissed	64	24
Total	276,649	260,272

The hours of labour of these employees were as follows:—

Males Hours of Work	Number of Employees
45 per week	93,822
50 per week	47,244
54 per week	26,850
58 per week	4,648
60 per week	20,541
Females	
45 per week	49,187
50 per week	15,970
54 per week	5,017
58 per week	463
60 per week	2,989

Much care was given to the matter of hours of labour. Investigations disclosed the fact that, on the receipt of spasmodic orders from merchants, manufacturers utilized all the experienced female help available, but were not willing during these rush seasons to engage beginners. The result was that the working day was lengthened for female employees, and in some cases they were employed the thirty-six nights overtime allowed by the Act in order to meet such exigencies. Considerable supervision was necessary to prevent this limit from being exceeded. One hundred and forty-eight complaints were received during the year. On investigation, 81 were upheld, 36 not upheld, 24 are pending investigation, and seven did not come within the jurisdiction of this Branch. Some investigations covered more than one complaint.

Proceedings were taken against two firms for violation of the Ontario Factory, Shop and Office Building Act. In both cases convictions were recorded and fines amounting to $71 were imposed. One firm was prosecuted on three charges, namely, for child labour, for operating a factory without first obtaining a permit and under the Criminal Code for maintaining a dangerous machine on which a boy under fourteen years of age lost a hand. For this a fine of $1,000 was imposed, to be applied towards the education, maintenance and advancement of the injured boy under the direction of the guardian. Action was also taken against another firm for refusing to comply with the inspector's orders, resulting in conviction and fine.

Thorough investigations were made to eliminate any traces of child labour, and as usual a few cases of such employment were found during the school summer holidays. The explanation usually was that the employer thought that children could be employed in a canning factory during the holiday time, or that the child was represented as being over fourteen years of age.

Reports from all districts showed that bake shops were being maintained in a clean and sanitary condition. This industry, it is stated, is developing into one of the vanguard industries of the province. "It is remarkable how the trade is expanding as indicated by the additions to buildings as well as the introduction of the latest equipment. It is quite apparent that the less modern bake shops must eventually adopt similar constructive methods or they will find their present methods do not appeal to patrons."

Accidents.—The accidents reported to the Department numbered 4,929 during 1926, 47 of these being fatal, as compared with 3,806 reported in 1925, with 35 fatal.

The following table shows the distribution of industrial accidents by industries and by causes:—

Employment Service.—The report states that the work of the twenty-five Ontario offices of the Employment Service of Canada indicates that the Service is retaining the confidence of the communities in which it is operated. "Statistical data collected through the Service can be of value as a complete record of unemployment in the Province only to the extent to which all employers and all workers register their need of workers and of work with the Service." In practically all centres there were indications of an improvement in industrial conditions during the past year, with steadier employment for a greater number of persons and a low labour turnover.

Applications for work numbered 190,586, as compared with 200,068 the previous year, and the opportunities for employment reported to the various offices totalled 156,995, a decrease of less than one per cent. A significant fact with regard to the placements is that, while the number, 135,331, is practically the same as the previous year, 5,880 more than last year were "regular" or placements which

SUMMARY OF INDUSTRIAL ACCIDENTS IN ONTARIO IN 1926 BY INDUSTRIES AND CAUSES

Cause of Injury	Totals		Class of Industry

might be considered permanent. More work of a normal industrial character was available and therefore less temporary relief work was necessary. Eighty-six per cent of all vacancies were filled and seventy-one per cent of the applicants were placed.

Stationary and Hoisting Engineers.—The Board of Stationary and Hoisting Engineers reported an increasing number of engineers holding certificates of lower grades and qualifying for higher grades each year. This increase is stated to indicate a growing demand on the part of owners of steam plants for high grade engineers, in order to secure efficiency and economy in the operation of these plants and is ample proof of the value of the graded certificates.

Steam Boilers.—This Branch also reported an expansion of the volume of business during the year. Five hundred and fifty inspections of boilers in operation were made during the year and it is interesting to record that boilers in schools under the jurisdiction of Toronto, Fort William and Port Arthur Boards of Education were included in this number.

Industrial Conditions in 1926

The report notes that the volume of employment in Ontario was considerably larger for the fiscal year 1926 than for either of the two preceding years, according to reports supplied by employers to the Dominion Bureau of Statistics. Approximately 2,700 firms were covered by these reports with a working force of 304,907 to 350,841. Taking the index number for January, 1920, as 100 the volume of employment for the fiscal year 1926 will be indicated by 93.1 as compared with 88.6 for 1925 and 90.1 for 1924.

The report contains an account of the labour legislation of the year. An account is also given of the unemployment relief work carried on during 1926. Under date April 6, 1926, an Order-in-Council was passed providing for the reimbursement by the Ontario Government to municipal corporations of one-third of the excess labour costs incurred by such corporations in respect of any work wholly or partly constructed between January, and April 15, 1926, solely for the purpose of providing work for the relief of unemployed persons.

A second Order-in-Council was approved on September 16, 1926, providing for a special warrant of $55,000 for a special account against which cheques might be issued from time to time on the authorization of the Minister of Labour for the payment of accounts in connection with the expenditure incurred by municipalities for the purpose of relieving unemployment in accordance with these regulations. Altogether seventeen municipalities participated in this scheme and claims to the extent of $48,906,89 were submitted to the Ontario Government for payment.

Alberta

The report of the Commissioner of Labour of Alberta for the year 1926 contains statistics of trade and industries in the province, and an outline of proceedings under the various acts administered by the provincial Bureau of Labour. These Acts include the Labour Disputes Act (the proceedings under this Act during 1926, the first year of its being in effect, were outlined in the June issue of the LABOUR GAZETTE, page 615); the Factories Act; the Minimum Wage Act; the Theatres Act and the Boilers Act. The work of the Alberta Government Employment Offices, which is supervised by the Commissioner of Labour, is also described.

Trades and Industries.—Returns received from 1,420 firms covered 24,861 male employees over eighteen, 583 males under eighteen, 3,341 females over eighteen, 223 females under eighteen, and 388 apprentices. Total pay-roll for wages and salaries was $34,991,086.76, of which sum $30,392,724.01 was paid to wage-earners. The number of employees, both male and female, increased during the second half of the year. Some trades showed considerable fluctuations, but these differences were levelled out in the totals for the industrial groups, indicating that unskilled employees make a practice of changing from one industry to another.

The following table, based on returns from 1,420 firms, shows, for the week of greatest employment, the number of employees grouped according to wage scales:

EMPLOYEES IN INDUSTRIES IN ALBERTA BY WAGE GROUPS

	Pay-Rolls
Officers, superintendents and managers	$ 4,598,362 75
Clerks, stenographers, bookkeepers, etc.	4,886,796 34
Wage-earners (including piece-workers, salesmen, etc.)	25,505,927 67
Total	$34,991,086 76

CLASSIFIED WEEKLY WAGE RATES (WAGE-EARNERS ONLY)

For week of Employment of greatest number	Males		Females		
	18 years and over	Under 18 years	18 years and over	Under 18 years	Apprentices
Under $6.00	16	21	7	6	3
$ 6.00 to $ 6.99	18	26	3	5	60
7.00 to 7.99	19	41	19	11	22
8.00 to 8.99	23	44	15	10	27
9.00 to 9.99	30	64	81	56	19
10.00 to 10.99	78	85	123	36	52

30.00 to 34.99	4,037	....	44	....	10
35.00 to 39.99	2,037	....	22	....	2
40.00 to 44.99	1,678	....	5	....	....
45.00 to 49.99	881	....	1	....	....
50.00 and over	1,144	....	....	....	....
Totals	24,861	583	3,341	223	388

Of the total number of employees in the province nearly 23,000 worked 48 hours per week or less, but considerable numbers worked longer hours; for example, 1,499 worked 54 hours per week, and 2,287 worked 60 hours per week.

Inspections.—Inspections under the provisions of the Factories Act and the Minimum Wage Act were performed by using the services of all the Bureau's staff of inspectors. It is stated that the operation of this policy has proved very satisfactory as it provides more systematic inspection, prevents duplication of visits to industrial establishments, and reduces transportation and subsistence costs of inspectors. Inspections were made during the year of 3,058 factories, shops and office buildings, and 449 recommendations relative to safety, hours and wages, and the employment of children were made, all of which were fully carried out by employers. All places within the scope of the Act received one inspection visit during the year, subsequent visits being for the purpose of checking up on recommendations, on complaint, or where there is a varying element of risk.

Hotels in cities of 5,000 population and over, and all freight and passenger elevators were brought within the scope of the Factories Act of 1926. Recommendations for the safer operation of elevators were made in 199 cases.

Minimum Wages for Female Employees.—Under the Minimum Wage Act 2,280 places of business were inspected during the year; 215 orders were made for adjustment of wages, 62 orders for adjustment of hours, and 16 orders for adjustment of staffs in accordance with the provision restricting the number of learners to one quarter of the total number of employees. Permits for overtime work in connection with emergencies were issued in a number of cases. Seven requests were received for permission to employ a greater number of apprentices than is permitted by the regulations; the reasons given being that there was a shortage of experienced help in the particular industry. Five of the requests were granted for a limited period and two refused. An increase was noted during the year in the number of employees coming under the orders governing manufacturing, personal service, offices and retail establishments, but the number in laundries, hotels and restaurants remained unchanged. The number of employees under each of the six orders were as follows:—

	Experienced	Apprentices
Order No. 1— Manufacturing	838	169
Order No. 2— Laundries, dyers and cleaning	261	30
Order No. 3— Hotels and restaurants	795	41
Order No. 4— Personal service	195	9
Order No. 5— Office occupation	2,509	151
Order No. 6— Retail establishments.	1,203	127
Total	5,801	527

Theatres Act.—The Boiler Inspectors assisted in supervising examinations for projectionists' certificates of which 25 were issued during the year.

Boilers Act.—The Chief Inspector of Boilers, in his report, mentions several accidents attributable to neglect of the boiler regulations. Two fatalities occurred due to exposed shafting, and in one case the owner of the steam plant neglected to carry out the instructions of the inspector to cover the shafting and prevent accidents of this kind.

A welding operator was killed outright when a water tank he was testing with compressed air suddenly exploded. Two stationary engines were wrecked owing to the necessary safety devices not being provided. The regulations call for an automatic engine stop valve to be

furnished at the throttle of each engine, and as these were not provided to prevent excessive speed, both engines went to pieces for this reason, and in one case the flywheel burst.

Two hundred and ten engineer's certificates were issued to candidates who applied to the Bureau for examination or renewals. These certificates are additional to those issued as a result of the examination held at the regular monthly examinations.

A total of sixteen prosecutions for violating the provisions of the Boilers Act have been undertaken with the co-operation of the Provincial Police Department.

Government Employment Offices.—Employment conditions in Alberta in 1926 were reported as good, although the number of vacancies filled showed a slight reduction from the previous year, which was the best in the history of the Service. Of the 60,106 vacancies filled, 52,931 were for males and 7,175 for females. This is a decrease of 649 males and 51 females. The decrease in female placements was due, not to lack of opportunities of employment, but to the fact there was a scarcity of applicants for employment. Many more female workers could have been placed on farms and in domestic employment in the cities had they been available.

Of the male placements 34,632 were sent to farms, 1,656 to building construction, 154 to clerical work, 1,243 to domestic and personal occupations, 2,067 to general labouring, 3,194 to lumber camps, 523 to manufacturing industries, 11 to professional and technical occupations, 2,756 for railroad construction and operation, 801 for mining, 1,378 to miscellaneous occupations, and 4,516 for casual employment.

Of the female placements, 1,580 were sent to farms, 26 to clerical positions, 2,753 as domestics, 4 to manufacturing, 3 to miscellaneous occupations, and 2,209 to casual employment. While the number of females sent to farms was less this year than in 1925 the vacancies offered showed an increase of approximately 100.

CHILD PROTECTION AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

THE Mothers' Allowances Act of Saskatchewan is administered by the Commissioner of the Bureau of Child Protection, who is appointed under the Children's Protection Act. The report of this official for the calendar year 1926 has been issued recently. Under the provisions of the Mothers' Allowances Act of 1922 the legislature makes an annual grant, to be spent in monthly payments to provide support or partial support for the dependent children, under sixteen years of age, of any woman who by reason of poverty is unable to take proper care of her child or children. The Commissioner has authority in regard to all applications for allowances, subject to the approval of the minister in charge of the Act.

No provision is made in Saskatchewan, as in Ontario, for the functioning of local boards in connection with claims for allowances. The establishment of such boards to deal with child welfare in each district is desired by the Commissioner. "The time has come in the field of child caring in this province," he says, "when the citizens in the centres of population should organize for the purpose of caring for cases arising in their locality, and not expect that all responsibility rest upon one central agency such as this bureau (i.e the Bureau of Child Protection), and for this purpose I am urging the appointment of child welfare committees in places where an incorporated children's aid society is not thought necessary or desirable."

Reviewing the work carried on under the Mothers' Allowances Act the report states that out of 608 new applications during the year for mothers' allowance 314 were allowed, which brought the total for the year to 1,387. There were also 268 cancellations, leaving 1,119 mothers receiving allowances at the end of the year. An aggregate of $325,430 was paid out in 1926, averaging per family $24.23 per month, and affecting 3,917 children under sixteen years of age. Included in the allowances paid are 912 widows, 181 women whose husbands are incapacitated from earning a living, 11 cases where orphans are taken care of by widows or unmarried women, and 15 cases where the husband and father is in jail. There were 44 more applications made and 51 fewer applications allowed in 1926 than in the previous year. In 1926 the amount paid out under the Act exceeded the sum paid out the previous year by $31,935.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Improved Health Record in Canada and United States

THE *Statistical Bulletin,* published by the Metropolitan Life Insurance Company states that the deathrate among the industrial populations of Canada and the United States as measured by that of the Metropolitan Industrial policyholders, was 9.5 per 1,000 in April. This is the lowest rate ever recorded for this month among this large cross-section of the population. For the fourth successive month of the current year, the deathrate has registered a decline over that for the corresponding month of 1926.

In an article on the general deathrate the Bulletin notes that "a sharply declining deathrate from tuberculosis is the most gratifying item in the favourable mortality picture of the year 1927, to date. In the first three months of 1927, the mortality from pulmonary tuberculosis among the Metropolitan Life Insurance Company's industrial policyholders declined nearly seven per cent from the figure for the corresponding period last year. The deathrate for white lives at the end of the first quarter was at the astoundingly low figure of 70.9 per 100,000. Since the mortality in the first part of the year is always much higher than at other seasons, it is almost certain that the full year of 1927 will set a new low record and probably by a large margin. Only sixteen years ago, in 1911, the pulmonary tuberculosis deathrate for white persons was practically three times as high as at present."

Progress of Health and Safety in the Woods

In the *Canada Lumberman* for June 1, Mr. W. C. Millar describes the progress of health and sanitation in logging camps in Ontario during the past fifteen years. The Ontario Department of Health appointed Mr. Alexander White sanitary inspector for the province in 1915. The first act of the new official was to secure health statistics for the camp. The records showed hundreds of cases of smallpox, typhoid, pneumonia, etc., with a high deathrate. These conditions called for drastic reforms. Hitherto camps had been built on any haphazard plan the foreman might consider the most economical. New plans were therefore issued to govern the construction of camps, specifying requirements for proper ventilation, and sleeping accommodations, so that each and every man slept alone, in order that the syphilitic, the tubercular and others suffering from diseases and vermin could not come in contact with the clean, healthy man, whom choice or necessity had driven into the lumber camps. Certain rules covered the location of the drinking water supply, in order to prevent pollution from animal or human wastes—the object being the prevention of typhoid fever and other intestinal troubles. Wash-houses, for the cleansing of the body and the clothing, were specified. A minimum of natural window-lighting was called for. With the knowledge the average man has of the germ-destroying power of the sun, the reason for this is apparent. For the comfort of the camp-inmates, and to lessen the danger of communicable diseases being passed along by overcrowding, a minimum of four hundred cubic feet of air space per man was required, and last, but by no means least—in fact, the regulation which is the keystone supporting all the above, the Sanitary Supervision Contract. This regulation calls upon every woods operator to draw up a contract with a qualified physician for a monthly visit of inspection of the sanitary conditions in his camp; a report of same to be sent monthly to the Provincial Department of Health. A clause covering the health insurance of the workman is also added to this.

All operators are allowed to deduct $1 per month from each workman for the supplying of medicine and medical skill, a contract to supply same having to be drawn up with a qualified physician. Where such contract has not been drawn up, hospital, medicine and doctor's care must be supplied by the operator at his own expense. One hundred per cent of the operators contract for the medical care of the employees.

Mr. Millar states the results of these sanitary regulations: "Statistics given out two years ago showed that the above diseases had decreased year by year until, that year, the number which had developed could be counted upon the fingers of one hand, with no deaths, and at a cost to the lumberman of only about $\frac{3}{5}$ of one cent on each thousand feet of lumber and $\frac{1}{5}$ of one cent per cord of pulpwood, the above estimate covering monies paid to contracting physicians, for the sanitary supervision of the camps."

The above regulations were laid before representatives of lumbermen, labour men and officials of the Department of Health, gathered at a round-table conference at Ottawa and Toronto, and after being agreed upon by all three, were incorporated into the laws of the Province of Ontario, and have since been copied in every particular by the Province of Manitoba.

The regulations are enforced by trained inspectors who are posted at strategic points throughout the province. The necessary grants for the maintenance of this staff were made, with the result that there is now a fully qualified inspector at the Soo, North Bay, Sudbury, Cochrane and Fort William, the Chief Inspector, Mr. White, being stationed at the headquarters of the Ontario Department of Health in Toronto. Should an outbreak of disease occur through failure on the part of the physician to report some unsanitary condition and have same corrected, the doctor is held responsible and, as in several cases his contract is cancelled by the Ontario Department of Health.

Mr. Millar mentions that plans for diminishing the serious losses due to infected wounds are now ready for trial. "When collecting the accident statistics two years ago, Mr. White made the amazing discovery that 70 per cent of the open wounds coming out from the woods were infected when they reached the doctor, thereby causing the healing process to take five times longer than it would have done, had the wound received proper first-aid when the accident occurred."

Improved Standards in First Aid Training in Canada

C. A. Hodgetts, M.D., director of the St. John Ambulance Association, Canada, who has been examining first aid teams throughout Canada in connection with various national trophies, recently stated at Montreal that there had been a noticeable increase in the standard of efficiency of the men and women appearing for examination in first aid, and a considerable increase in the number of teams entered in sectional, provincial and Dominion competitions. "I have already examined over 200 classes," said Colonel Hodgetts, "and I anticipate that more than 300 first aid teams will have been examined before I return to Ottawa. I have found a decided increase in the standard of efficiency, and I have also discovered greater interest on the part of medical officers, railwaymen and plant officials, who now agree as to the merits of first aid training and the usefulness of such knowledge in times of emergency. The general public also are learning about first aid, so that a general sentiment is being created favourable to the spread of the principles of the St. John Ambulance Association."

Accidents in Ontario Textile Mills

An analysis of compensated injuries in the textile industry throughout the Province was completed recently by Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations of Ontario. The total number of accidents reported to the Workmen's Compensation Board, each involving the loss of seven days or more, was 753 in 1926 compared with 692 in 1925. The total number of employers in this class was 320.

A strong similarity is noted between the causes of injuries in 1926 and 1925; in both years mechanical accidents and handling objects stand out as the greatest single factors. Mr. Morley calls attention to the importance of preventing infection. Out of 199 accidents caused by "handling objects," there were 78 cases of infection, and out of 293 mechanical accidents there were 26 infections. "These and other figures quite clearly indicate that, in the average mechanical accident, the injured worker seeks first aid at once, and, in non-mechanical accidents, first aid is not looked upon as so important. One wouuld be almost inclined to believe that a little blood is a strong incentive to first aid."

Ventilation or Rock-Dusting of Coal Mines

Criticism of the rock-dust remedy for so-called "coal-dust" explosions is offered in a recent book entitled "The Rock Dust Remedy," by Harry Phythyon, a coal mine superintendent of Pennsylvania. The theory of the Bureau of Mines, in its campaign for rock-dusting coal mines, is that explosions are largely due to coal dust. In this author's opinion the stress on rock-dusting encourages neglect of ventilation, a more serious cause of explosion. According to a review of the book in the *Nation* (New York), Mr. Phythyon does not take the extreme position that coal dust can play no part whatsoever in mine explosions, but unlike the Bureau of Mines, he believes that coal dust alone, in the absence of explosive gas, will not make trouble. His central idea is that coal dust helps to make a mine atmosphere explosive, when some explosive gas is present, by lowering the explosive limit of gas; and that coal dust itself, suspended in the air, will serve somewhat to extend a mine explosion. But he shows conclusively that mine explosions are not due to coal dust alone.

British Mine Safety Experimental Station

A "Safety in Mines Research Station" was opened in June at Buxton, Derbyshire, England, under the auspices of the Safety in Mines Research Board, a body which was appointed in 1921. The Miners' Welfare Committee have made a contribution towards the expenses of the station. Research work in connection with coal dust explosions has been

carried on in Great Britain since 1906, and small experimental stations were maintained, first at Normanton, Yorkshire, and later on the seashore at Eskmeals, Cumberland. The investigations at these stations showed the need for experiments on a larger scale. The site of the new station covers 411 acres, and has a perfectly level position for a coal-dust explosion gallery over a length of about 1,500 feet. There are also level spaces for other explosion galleries and for laboratories and workshops, while protection in front and on both sides of the site is afforded by rising ground, and there is a wide danger area free from houses and roads. In the lay-out provision has been made for all work that requires large-scale operations, such as that on mine ventilation, firedamp explosions, mining explosives and gobfires.

Tetraethyl Lead Gasoline Motor Fuel

The United States Public Health Service recently published Public Health Bulletin No. 163, on the health hazards involved in the retail distribution and general use of tetraethyl lead gasoline motor fuel (a note in the May issue of the LABOUR GAZETTE, page 529, referred to a marked increase, due mainly to this cause, in the deaths from occupational diseases in New Jersey). The Public Health Service undertook the investigation in order to determine what health hazard, if any, is involved in the retail distribution and general use of tetraethyl lead gasoline as an automobile fuel. The fear of possible danger from the wide distribution of this lead compound was increased by cases of fatal poisoning in Ohio and New Jersey. These deaths, however, occurred in connection with the manufacture and blending of concentrated tetraethyl lead, and not with its distribution.

After an exhaustive study the committee of inquiry reported that in their opinion there are no good reasons at present for prohibiting the use of ethyl gasoline, of the composition specified as motor fuel, provided that its distribution and use are controlled by special regulations. They found that in the regions in which ethyl gasoline has been used to the greatest extent as a motor fuel for a period of between two and three years no definite cases had been discovered of recognizable lead poisoning or other disease resulting from the use of ethyl gasoline.

It is conceded, however, that this conclusion was reached from observations in a limited field, and that a wider survey may reveal greater hazards from the new product. The report concludes by recommending that a special study of general problems arising out of the use of tetraethyl motor fuel should be undertaken by means of a special appropriation. "Outside the question of ethyl gasoline it would seem from this investigation that wherever automobiles are housed together there is an accumulation of lead dust which may prove to be a source of danger to the workers involved, in addition to the hazards arising from the production of carbon monoxide gas. The vast increase in the number of automobiles throughout the country makes the study of all such questions a matter of real importance from the standpoint of public health."

A set of proposed regulations to control the use of tetraethyl lead gas is appended to the report.

Tannic Acid for Burns

Industrial Safety News, the quarterly publication of the Nova Scotia Accident Prevention Association, recommends the use of tannic acid for burns. "The Tannic Acid treatment for burns has been tried out in some of the large hospitals in the United States and favourable results on this new method are being reported. Prominent medical men are recommending the use of two and a half to five per cent solution of tannic acid in water as a wet dressing for twenty-four hours, when the burned part becomes a mahogany brown colour. The dressing is then removed and the patient is treated with heated dry air. In some cases this is done by erecting a tent over the bed and inserting electric lights. Patients treated by the tannic acid have a firm mahogany membrane on the burned area—healthy skin is apparently unaffected by the treatment. The severe pain present with extensive and serious burns is considerably lessened by this treatment, which is perhaps the most effective method yet discovered for allaying the pain. As burns are liable to occur anywhere, it is recommended that the dry powder, tannic acid, be kept in mills, mines, factories, etc., and included in all first-aid equipment. The solution can be easily made by mixing four teaspoonsful of the dry powder in a glass of water. This makes the two and a half per cent solution approximately. It can be sprayed on the part or can be applied by means of compresses."

INTER-PLANT SAFETY CONTESTS

Part of an address delivered by Mr. E. E. Sparrow, Imperial Varnish and Colour Company, Limited, Toronto, before the annual convention of the Industrial Accident Prevention Associations at Toronto, May 10, 1927.

INTER-PLANT safety contests as a means of reducing the number of industrial accidents were strongly recommended in an address by Mr. E. E. Sparrow, of the Imperial Varnish and Colour Company, Toronto, delivered before the annual convention of the Industrial Accident Prevention Associations at Toronto in May (LABOUR GAZETTE, June, 1927, page 639). Mr. Sparrow showed that while conventions and addresses might rouse enthusiasm for accident prevention there was no method equal to inter-plant contests for maintaining throughout the year the interest of management and staffs in the accident record of their plant. He described a contest in which his company took part as follows:—

One inexpensive shortcut to increased safety in our plants is to develop to a greater degree the enthusiasm and inspiration of the man in each plant responsible for the prevention of accidents. An inter-plant contest will keep him enthusiastic every day in the year and will also give him an opportunity of comparing his work with that of a safety enthusiast in another plant.

Let me tell you of an inter-plant contest that has been going on between two plants in this city for nearly two years. In August, 1925, the Imperial Varnish and Colour Company were entirely dissatisfied with the number of accidents they were experiencing. A good deal of work has been done such as guarding machinery and displaying bulletins and it seemed as though the more money we spent on safety work, the more frequently did our employees get injured. From January 1st to July 31st we had ten accidents, an extremely large number considering the fact that we only have about 130 employees. It just so happened that, about this time, we had as Chairman of the Chemical Industries Safety Association Mr. George N. Bull who among other numerous jobs was in charge of safety work at Lever Brothers, a plant not far removed from our own. It appeared to us that if we could reach the degree of efficiency in our plant that was evident at Lever Brothers, we would be going a long way towards reducing our accident experience. One day, while talking to Mr. Bull, we asked him what he would do if someone challenged him to a no-accident contest. He declared that he would not only accept the challenge but would also defeat anyone so rash as to get into a contest with him. Being rather reckless, we called his bluff, and immediately commenced this contest between these two plants. There were, of course, several details to be worked out, but four months later, at the end of December, 1925, we had satisfactorily attended to most of them.

The first difficulty that we encountered was the fact that, while Lever Bros. had 270 employees, the Imperial Varnish only had 130. As this difference in number of employees would prove an obstacle to every attempt at inter-plant contests, a simple method of surmounting this difficulty is explained here for your reference.

At the end of each month take the total number of accidents for the year to date and estimate what the average would be for a year. Then ascertain the number of accidents this represents per 100 employees. Substract this 100 employee accident figure from the 100 per cent efficiency mark and it will give you your efficiency rating for the year to date. When the number of accidents in each plant is handled by this means of figuring, a very fair comparative efficiency rating is reached.

The next matter to definitely decide was what constituted an accident. Since the honours went to the plant having the fewer accidents, you can readily see how important this matter was. We decided on a simple solution—when an accident took place that had to be reported to the Workmen's Compensation Board, either for compensation or for medical attention, it constituted an accident in the contest.

It was arranged on the first day of each month that the Imperial Varnish Company would notify Lever Brothers of the number of accidents experienced during the preceding month. Lever Brothers would then work out the percentage efficiency figure as outlined above and 'phone us back the result. A report of the month's accidents would then be posted up in different points in the factory, with suitable comments thereon. We would first specify the number of accidents in each plant for the month and for the year to date. Next would be the efficiency rating, arrived at by the process of figuring already outlined. Then would follow the comments, either congratulating the employees for having no accidents or urging them on to greater effort, with the final elimination of all accidents. At the bottom of the notice we appended the three words "Beat Lever Brothers." This slogan, strange to say, has come to mean more to us than the time honoured one "Safety First"

and we use it to good advantage on every possible occasion. In the days before the pay cheque, we used it on our pay envelopes and even on some of our factory stationery you will find these same three words "Beat Lever Brothers."

The result this no-accident contest has had on our accident experience is shown by the fact that from January to July, 1925, when there was no contest, we experienced ten accidents; from August to December, with the contest started, we had four accidents. Thus, for the full twelve months, there was a total of fourteen accidents. For the following twelve months, January to December, 1926, we had reduced our total number of accidents to four.

Incidentally, we "Beat Lever Brothers" in 1926.

So far during the present year we are considerably behind Lever Brothers who have done some exceptionally fine work this year in keeping their experience down to two accidents. However, the year is only four months gone and we may yet "Beat Lever Brothers".

This contest has proven conclusively to us that it is a splendid medium for keeping up a perpetual spirit of enthusiasm. We have, of course, other systems of preventing accidents, including plant inspection once a week by all the plant foremen, bulletin displays in each department, a bulletin board changed daily showing the number of days since the last lost time accident and other similar stunts, all of which are kept constantly uppermost in our thoughts by the knowledge that should we forget safety for just a few days, Lever Brothers might get ahead of us.

So much for an actual case of an inter-plant contest.

A year ago, at the annual meeting of the Chemical Industries Safety Association, it was suggested that this idea of inter-plant contests be taken up in a much bigger way in this Province. Since then it has been learned that a no-accident contest was held in New York State by the Associated Industries, an organization having almost every known variety of industry in its membership. The contest was held for a period of three months and three hundred and three firms competed. The result of the contest can best be gauged by an excerpt from a report by F. E. Redmond, Director, Educational Bureau Associated Industries. He says:—

"At the conclusion of the campaign we sent out a questionnaire requesting the contestants to designate thereon whether they had a reduction or an increase in accidents during the campaign and also to indicate as to future campaigns of this kind. There was an almost unanimous response to the latter question favouring a continuation, the majority advising three months for a campaign."

If 300 firms in New York can feel so disposed towards inter-plant contests, I feel that we should certainly be doing ourselves an injustice if we did not look further into the scheme.

In conclusion, may I strongly urge that a committee be formed to evolve some workable scheme whereby the majority of plants in this Province may compete in an inter-plant contest for an experimental period of three months.

All-Australasian Trade Union Congress

The following resolutions were adopted at the convention of the All-Australasian Trade Union Congress, held at Melbourne during May:—

"That this congress, representing the working class of Australia, holding that the workers collectively have the right to say at what rate they will sell their labour, instructs the incoming executive to arrive immediately at a basic wage adequate to the workers, and equal in purchasing power throughout the Commonwealth. This having been fixed, it shall be the duty of both the industrial and political wings of the movement to take the necessary steps to at once initiate a campaign for its adoption.

"That this congress, realizing the great value to the working class movement of labour research and information bureaus, urges the unions in the different States to assist in the formation of such bureaus, and where bureaus exists, to affiliate with them immediately. That the bureaus be requested to consider the following:—(*a*) The trend of applied science to production and labour; (*b*) the relationship of production to employment; (*c*) the relativity of prices to production; (*d*) the regulation of nature's resources to consumption; (*e*) the scientific distribution of labour to harmonize with communal consumption; and (*f*) or any other matters affecting the industrial well-being of the employees."

CANADIAN MANUFACTURERS' ASSOCIATION

Proceedings at Annual General Meeting, June, 1927

THE Canadian Manufacturers' Association held their 56th annual convention at Calgary, Alberta, on June 2-4. President John M. Taylor, in his opening address, described the progress made by industry and trade since the last convention. "Further progress," he said, "has been made during the past year in the recovery of international trade. Currencies of European countries are becoming stabilized; channels of commerce are being defined; and reservoirs of buying power are filling. The result is an increasing need of goods, and improvement in labour conditions is enabling industry to meet it. Canada is benefiting by the recovery of the world.

"Conditions within the country during the past year have been improving. The cumulative effect of three large crops in succession, sold at good prices, is reflected in the increased demand for goods, owing to the greater buying power of those engaged in agriculture. The immense expansion of the pulp and paper industry, with the resulting heavy exports, has contributed largely to the national trade balance. The amazing development of mining which has increased the investment of capital, and the purchases of mining equipment and material, has released great sums in expenditures.

"We must be careful not to over-estimate the improvements which are encouraging us during the last few months. While some factories are busier, employing more people, and turning out more goods, a great many, owing to low prices of goods, are not making sufficient profits to finance expansion and maintenance; in fact, some of them are making none. There is always the tendency, a very natural one, to magnify signs of improvement here and there, and to assume that we are launching immediately into an era of prosperity. We have passed through an exceedingly trying period. The great prosperity which the United States enjoyed from 1921 up to the present, passed us by almost entirely. There has been a divergence of opinion as to causes, but the fact remains that they got it, while we missed it.

"Relations between employers and employees in Canada, on a whole, are excellent. With the spread of education there is a better understanding of the economic law on which manufacturing is based. People are realizing that there is often a gap between what is desirable and what is practical. The degree to which social legislation can be established and maintained is always determined in the end by the public—which decides how much it is willing to pay. But where this fundamental economic law is recognized, study and goodwill are doing a great deal to safeguard employees against the great hazards of life, such as sickness, accident, unemployment, old age and death. It is not an extravagant statement, because it is based on facts, that the standards of living and working conditions are higher to-day in the United States and Canada than in any other countries in the world, with the possible exception of Australia and New Zealand."

Industrial Relations

The report of the Industrial Relations Committee summarized the recent activities of the association in matters affecting the relations of labour and industry. It described the attitude of the employers' delegates in regard to the Draft Conventions and Recommendations adopted at the 8th and 9th sessions of the International Labour Organization (the proceedings at these sessions were described in the LABOUR GAZETTE, July, 1926). Referring to the Imperial Mission on Industrial Relations, which visited Canada in 1926 (LABOUR GAZETTE, May, 1927, page 518), the committee states that as regards Canada, the mission was anxious to study at first hand the working of the Lemieux Act. "Up to the present," it is stated, "it is well known that England has not seen fit to adopt this type of legislation any more than the compulsory arbitration legislation in vogue in Australia. So far as the Australian legislation is concerned, the English point of view is that it has not proved a success, a view which apparently is more and more shared in Australia itself. As regards the Canadian type of arbitration legislation, i.e., the Lemieux Act, the English view is that while it may work well in the case of great public services such as railways, it could not be successfully applied to ordinary industrial disputes. On this point the mission was anxious to get the views of Canadian industrialists.

"In this connection it is interesting to note that the American Bar Association has recently gone on record as being opposed to both the compulsory arbitration legislation, and to the setting up of so-called industrial courts. In place of these methods of settling industrial disputes, the Bar Association advocates voluntary agreements between employers and em-

ployees, referring disputes to Boards of Referees whose decisions shall be binding on the parties. This, as a matter of fact, is precisely the view at present held in England."

The committee outlines the history of Male Minimum Wage legislation in British Columbia. "The British Columbia Act," it is stated, "is the first Minimum-Wage-for-Men legislation in Canada, and apart from the technical legal objections raised by the British Columbia employers, there is, of course, the solid and substantial ground of opposition, that such legislation will inevitably prove a serious handicap upon British Columbia industries in competition with competing industries in other provinces of Canada and in the United States, where no such minimum wage legislation exists. It goes without saying that your committee is watching with great interest the fate of the first Minimum-Wage-For-Men Legislation which has been attempted in Canada."

The Association opposed the proposed extension to boys of the Ontario Minimum Wage Act until further investigations should have been made of the probable effects of such a change. "The reasonableness of this attitude was recognized by the Government and Minimum Wage Board with the result that a survey of the kind proposed is at present being carried out by a member of the Minimum Wage Board. Upon its completion the question of further action, if any, will be considered by your committee in the light of the conditions disclosed."

The report describes the action of the employers in regard to the new Workmen's Compensation Act of Quebec. Difficulties arose over the question of insurance resulting in the postponement of the date at which this Act is to become effective (LABOUR GAZETTE, April, 1927, page 346)

In Alberta the employers successfully opposed proposed increases in the amount of compensation benefits, and the government finally agreed to appoint a special committee to investigate the subject of Workmen's Compensation, this committee to report to the legislature at its next session. (The names of the commissioners are given on another page of this issue).

On the question of the eight-hour day the report points out that Alberta is the only Canadian province that has attempted to follow British Columbia in passing legislation. This attempt was defeated through the efforts of the Alberta branch of the Association, the government contenting itself with appointing a commission (the report of the Commission was outlined in the LABOUR GAZETTE, April, 1927). The Association also opposed the legislation passed at the last session of the Dominion Parliament to enable trade unions to register their union labels. The Association regrets this legislation, on the ground that "if trade unions are to be given a property right they ought to assume the full legal responsibility that in the case of every one else, go with it."

Industrial Disputes Investigation Act

The report concludes with the following note on the Industrial Disputes Investigation Act:—

"This Act, better known as the Lemieux Act, having now been in force for 20 years, your Committee feels that it may be of interest to consider how it has worked. The facts are that in 93.9% of the 597 disputes which have been dealt with under the Act since its inception in 1907, strikes have been averted or ended. It is also worthy of note that there has been a striking increase in the number of cases in which the parties voluntarily invoked the Act to settle disputes which did not actually come within its scope, which is, of course, limited to disputes in mines, railways, and public utilities. The figures are that during the period of 1907 to 1919, only 23 disputes other than in mines, railways and public utilities were brought under the Act by the consent of the parties,—i.e. 6% of the total number dealt with; on the other hand, from 1920 to 1923, 42 disputes were referred by consent, i.e. 19% of the total. In addition during the period 1920-23, 21 disputes involving workmen under municipal or provincial control were dealt with under the Act by consent. Of these 86 disputes there were only two in which a strike was not averted or ended.

"Your Committee notes with interest that a bill has recently been introduced in England embodying the principles of the Lemieux Act, also that in Australia the employers are looking in the same direction.

"In view of the fairly substantial measure of success of the Act within its limited field, the question is raised from time to time whether it might not with advantage be extended to apply to employment in general. On this point your Committee agrees with the British view referred to earlier in this report, that while the Act has proved a success as applied to disputes in great public utilities, the stoppage of which would seriously prejudice the general public, it would not be wise to extend its application to disputes in general industry."

NOTES ON LABOUR UNION ACTIVITIES

District 26, United Mine Workers of America

ONE hundred and thirteen delegates were in attendance at the annual convention of District 26, United Mine Workers of America, which was held in New Glasgow, N.S., June 20-27, 1927, and which, according to reports, was the largest convention in the history of the district. The report of the officers showed that the membership at the present time was larger that at any previous period. Steadier employment in collieries in North Cape Breton was one of the questions discussed and steps were taken by the convention to bring about a more equal distribution of work during the months of January, February and March, when shipping is suspended owing to ice conditions. Various proposals were made in reference to amendments to the Mines Act and Compensation Act. It was decided to ask the Provincial Government of Nova Scotia to initiate some system of Old Age Pensions.

Mr. Gordon W. Scott, of Montreal, who was retained to represent the men in investigating the capitalization, finances and general business of the British Empire Steel Corporation, made his report in person and explained to the delegates the intricate and involved coal business. A feature of the convention was a resolution protesting against the actions of the district officers, which was defeated, being supported by only 29 delegates out of a total of 113 attending. There was unanimous disapproval on the question of renewing the support of the miners to resuscitate the *Maritime Labour Herald*. It was decided to hold a special convention in January, 1928, for the purpose of adopting a policy as to future wage contracts to replace the present agreement, which expires January 31, 1928.

Mr. Ed. Dobbins, international board member from the State of Illinois, district 12, addressed the convention, giving particulars as to the present standing of the United Mine Workers' organization in the United States.

Order of Railroad Telegraphers

The twenty-fifth regular and second triennial session of the grand division of the Order of Railroad Telegraphers was held at St. Louis, Mo., May 9-21. President E. J. Manion presided over the meeting, which was attended by a very large number of delegates from Canada and the United States. In the president's address he compared the three-year period 1921-1924 with the period 1924-1927, showing that the latter period was productive of more satisfactory results to the organization than the three preceding years, in that a greater degree of stability was established in wages and working conditions and a better feeling engendered between the railroad managements and the various committees of the order. Revision of schedules had been negotiated with practically all the carriers in the United States and in some instances two revisions had been accomplished. The president, in dealing with the situation in Canada stated "that the committees in the Dominion of Canada had been faced with a different economic condition than that obtaining in the United States, which induced them to withhold general schedule revisions until the complexities, economic and political, became more stable." No general schedule revisions had been negotiated in Canada since the last convention, but according to figures quoted the average rate, reduced to an hourly basis is .6475 cents, applicable to 7,124 schedule positions on the Canadian Pacific and Canadian National Railways. The president also referred to the jurisdictional dispute over towermen and levermen in Canada. These men had been claimed and maintained by the Brotherhood of Maintenance-of-Way Employees for many years, but in 1919 the Canadian membership of this organization made claim to jurisdiction over these employees, and asked that formal request be made upon the M.W.E. organization for release of jurisdiction. The request was made, but little progress was made owing to several changes in the presidency of the Brotherhood of Maintenance-of-Way Employees and the attitude of the members of that organization in Canada. In the meantime the Brotherhood of Railroad Signalmen attempted to assume jurisdiction over tower and levermen in Canada, which resulted in another jurisdictional dispute. Finally a conference was held between the presidents of the three organizations concerned, and resulted in giving the Order of Railroad Telegraphers jurisdiction over these employees. Notwithstanding the agreement reached and particulars of same forwarded to both the Canadian Pacific and Canadian National Railways, the M.W.E. committee negotiated with the former company an agreement, effective January 1, 1926, which included tower and levermen. It was the opinion of the president "that it might be necessary to deal directly with the wilful committee of the M.W.E. organization that has so determinedly defied their grand officers." The practice of train and engine ser-

vice employees using the telephone in connection with the movement of trains, was also referred to by the president, and he informed the delegates of the steps being taken to curb this practice. President Manion also informed the delegates that the organization was bending its efforts towards securing revisions of agreements on many railroads in United States and Canada, which contemplate increases in wages, the establishment of relief periods, either by vacation, relief days or the six-day week plan, time and one-half for Sundays and holidays, and other important reforms which make for better conditions of employment for the members of the organization.

The vice-presidents gave an account of conditions within their several jurisdictions. Hon. G. D. Robertson, third vice-president, who has charge of all lines in Canada as well as the Michigan Central Railway, Central Vermont Railway and the Père Marquette Railway in the United States, reviewed conditions as affecting these lines, and informed the delegates that six divisions of the organization, representing 7,200 positions, have schedule revisions under way, while all other divisions in Canada contemplate revisions during the year. Mr. Robertson also referred to the troubled situation on the Père Marquette Railway, and when he had completed his address, President Manion asked that the vice-president be excused from attending the Grand Division owing to the critical situation on this railway.

Among the resolutions adopted were: (1) Recommending vacation with pay and one day's rest in seven; (2) Recommending the elimination of commercial telegraph business, and failing in this that provision be made for the payment of ten per cent commission on all business handled; (3) Favouring the five-day work week; (4) Appointing a national legislative committee of not less than three members, the chairman to be one of the vice-presidents, with headquarters in Washington, D.C.; (5) Reaffirming opposition to the abuse of injunction power (6) Arranging a fund to provide a home for totally disabled members after continuous membership of twenty-five years (7) Assessing each member $2 per annum for the purpose of establishing and maintaining a home for members suffering from tuberculosis; (8) Favouring the six-hour day; (9) Instructing the president and other officers to work for the ultimate federation or consolidation of the Brotherhood of Railway and Steamship Clerks and the Order of Railroad Telegraphers.

Among the officers elected were: President, E. J. Manion, St. Louis, Mo.; Secretary-treasurer, L. J. Ross, 3673 West Pine Blvd., St. Louis, Mo., third vice-president, Hon. G. D. Robertson, Ottawa, Canada.

One Big Union

The fifth convention of the One Big Union was held in Winnipeg, Man., May 2-5, with twenty-two delegates present, presided over by Mr. S. Sykes, chairman of the general executive board. During the opening session, T. B. Roberts of Sandon, B.C., who recently returned from a trip to Europe, gave a short address, briefly outlining the labour situation as he had found it in Great Britain, Germany and Russia. Regarding the Russian situation he stated "that his first impressions were not very good ones," but pointed out that when one overlooked the primitive state of the civilization, it would be realized that underneath great progress has been made in the social viewpoint of the workers." Dealing with conditions in factories and the provisions made to look after the health of the workers, he pointed out that in the more hazardous industries, provision was made to feed and provide rest homes for the workers. Mr. Roberts further stated, "that he was more convinced than ever, after his trip, that our form of organization was much ahead of the form of organization in Great Britain, Germany or Russia."

The secretary read the report of the general executive board, in which was outlined the activity of the board and the organization work since the last general convention. Reference was made to the seceding to the Industrial Workers of the World of a large number of lumber workers with headquarters at Sudbury, Ont. These workers, it was claimed, were influenced to make the change by a daily Finnish language paper (*Industrialisti*) published in Duluth and strongly I.W.W. in sympathy. The report showed that an active organizing campaign had been carried on in British Columbia, Northern Ontario and Nova Scotia. The work in the latter district had made considerable progress until the strike of March, 1925, closed the mines. Shortly after the commencement of the strike the O.B.U. sent out a call for financial assistance for the miners in Nova Scotia, and a body was formed in Winnipeg under the name of the Winnipeg and District Nova Scotia Relief Fund. This body sent funds amounting to approximately $12,000, and about forty tons of clothing to the aid of the miners and their families. The report further claimed that soon after the strike came to an end, the officials of the United Mine Workers of America started a campaign to induce back to that organization the members who had

joined the O.B.U. In referring to organization in the United States, the report claimed that as soon as the textile strikes were won in the State of Massachusetts, interest in this work waned. The unit in San Francisco had a difficult time, owing, it was claimed, to "the discrimination in the building trades by the unions of the American Federation of Labour." Continuing, the report made reference to the efforts that had been made to absorb the independent machinists' organization — the Amalgamated Metal Workers—in the State of New York, and claimed that as soon as a general move in the east could be started, this body would be a party to it. Mention was also made to the part played by the O.B.U. in the formation of The All-Canadian Congress of Labour, which took place in Montreal in March of this year.

The convention recommended that a complete survey be taken of the whole Sudbury district, and if it is found expedient that an organizer be sent there to institute a unit of the lumberworkers. It was also decided to organize the Northern Ontario mining area, but it was considered unwise to attempt, at the present time, an organizing campaign in Alberta.

Some of the constitution amendments were as follows: (1) That a complete record of the membership be kept by the general executive board; (2) Creating a new position as supervisor of organizers, this officer to be a member of the general executive board, and responsible to that body for the work of the organizers; (3) That the wages of the organizers shall not exceed $40 per week, and when away from home, their expenses shall not exceed $4 per day; (4) Authorizing the general executive board to call a special convention within thirty days upon receipt of a demand from three or more district boards or labour councils with a combined membership of not less than 5,000; (5) That all members handling funds shall be bonded; (6) Authorizing members of the general executive board to act as organizers.

Among the resolutions adopted were the following: (1) Demanding the enforcement of the Child Labour Act of New Brunswick, and also the laws for the protection of coal miners in that province; (2) Instructing the general executive board to print the O.B.U. constitution in whatever language necessary; (3) Recommending that the sum of $50 be donated to the general secretary for his services during the convention; (4) Requesting the Governor of the State of Massachusetts to grant a new trial to Sacco and Vanzetti, or failing in this, that they be granted a free pardon; (5) Forbidding any member from holding office until he has been in the unit for six months and has attended at least one-half of the meetings and is in good standing at the time of election. The five executive board members elected were as follows: S. Sykes, Winnipeg, Man.; Allan Meikle, Winnipeg, Man.; T. B. Roberts, Sandon, B.C.; W. Broach, Calgary, Alta.; W. Arnberg, Port Arthur, Ont.

Winnipeg, Man., was selected as the next convention city.

American Federation of Musicians

President John N. Weber presided at the thirty-second annual convention of the American Federation of Musicians, held in Baltimore, Maryland, on May 16-21. The president in his address reviewed the history of the federation, giving special attention to the events of the last few years. Among these were the threatened strike of musicians in San Francisco, Cal., and the strike in Chicago, which was of short duration, but "which involved more musicians at any one time than had ever been before so involved in the entire history of the federation, being approximately 2,500 members".

Dealing with the situation in Canada, President Weber made reference to an organization which had been formed in Vancouver "styling itself the 'Canadian Theatrical Arts and Crafts', incorporated under the Societies Act of British Columbia. This society proposed to include in its membership stage hands, moving picture operators and musicians, in other words, it sails under the banner of one union for all theatrical crafts. Its obvious purpose is to enter into competition with the *bona fide* local union of musicians, stage hands and moving picture operators". The president stated that "the attempt to form a Canadian movement as against the American Federation of Labour is about twenty years old. So far it has not made any considerable progress, as the wage-worker realizes that recognizing a political dividing line among the workers in the United States and Canada would be playing into the hands of unfair employers. In some cities, such as Montreal, an antagonistic organization, sailing under the colours of Canada, has been in existence for some time". President Weber declared that "the conventions these last thirty years had built well, and therefore the organization had the absolute right to hold, without disillusionment, that it would continue to do so and that as a result the federation would remain one of the most successful organizations of workers that has ever been maintained".

During one of the sessions of the convention, an eulogy was delivered by Chauncey

A. Weaver to the memory of David Arthur Carey, executive officer of the federation, who passed away at his home in Toronto on March 26. By a standing silent vote the delegates passed a resolution extending deepest sympathy and unfailing regard to the bereaved family. The convention authorized the treasurer to pay to the widow of D. A. Carey the sum of $5,000.

Among the resolutions adopted were the following: (1) Instructing the president of the American Federation of Musicians to devote such time as is possible to visiting the different locals; (2) Increasing the salary of the National Executive Board to $1,000 per annum per member; (3) Demanding a new trial for Sacco and Vanzetti; (4) Favouring one day's rest in seven and urging all locals. where the seven-day week prevails, to work for the shorter work week.

The officers elected were as follows: President, Joseph N. Weber, 1440 Broadway, New York; vice-president, William L. Mayer, 212 Charles St., Mt. Oliver Station, Pittsburgh, Pa.; secretary, William J. Kerngood, 239-241 Halsey St., Newark, N.J.; treasurer, H. E. Brenton, Box B, Astor Station, Boston, Mass. The Canadian representative on the executive committee is G. B. Henderson, 50 Gerrard St. East, Toronto, Ont.

Cloth Hat, Cap and Millinery Workers' International Union

The sixteenth convention (tenth biennial) of the Cloth Hat, Cap and Millinery Workers' International Union, was held in New York City on May 1-11, with seventy-eight delegates present, representing thirty-one local unions and three joint boards.

Max Zuckerman, general secretary, presented the executive board's report, which outlined the activity and progress of the organization during the years 1925-27. According to the report, an extensive organizing campaign had been carried on since the last convention, which resulted in a number of new locals being instituted in both the cap and millinery trades. In the latter trade, a very substantial increase in membership generally was recorded. Referring to the factional fights "which, at the present time, were undermining the very foundation of some of the needle trade unions," the general secretary informed the delegates that the general executive board had adopted a policy of toleration, and this had steered the organization clear from unhealthy factional struggles. The incoming general executive board was urged to continue this policy, and do all in its power to influence all local unions of the organization to do likewise.

The convention reaffirmed its position in favour of the closest organized co-operation between all unions of the needle trades, and instructed the general excutive board to issue a call to all needle trade unions of America to meet in conference for the purpose of devising ways and means for the establishment of a permanent needle trade alliance. The board was also instructed to urge the American Federation of Labour to exert its efforts to bring about the reunion of the trade union movement of the world.

Request was made for release of Sacco and Vanzetti, Governor Fuller of Massachusetts to be petitioned in regard thereto. Opposition was expressed to citizens' military training camps, it being the conviction of the convention, that these camps are used to foster an anti-labour spirit and to develop a spirit of militarism and imperialism. The convention also went on record as favouring the release of all political prisoners in all countries and demanded the recognition of Soviet Russia and the withdrawal of armed military forces from China.

Some of the constitutional amendments adopted, which are subject to sanction by a referendum vote of the membership) were: (1) Making provision that the general executive board shall have the power to elect an acting president or general secretary-treasurer in case of vacancies occurring by the death or resignation of either; (2) Increasing the number of members of the general executive board from 13 to 15; (3) Increasing the representation to conventions for locals having a very large membership, but no local union to be entitled to more than fifteen delegates.

Among the resolutions adopted were the following: (1) Instructing the general executive board to continue its friendly and fraternal relations with the United Hatters of North America and maintain its active participation in the joint union label board with a view to eventually arranging a conference of representatives of both organizations for the purpose of considering ways and means for a complete amalgamation of the two organizations; (2) Providing that women workers employed on operating and on other branches in which men are usually employed shall receive equal pay for equal work; (3) Instructing the general executive board to take up the question of the five-day forty-hour week with the various millinery locals of the city of New York with a view to

bringing about its introduction in the millinery trade; (4) Declaring that it is extremely desirable that wherever and whenever conditions are ripe, international unions of the same industry shall be united into a single international union; (5) Favouring independent political action on the part of the workers and the formation of a labour party; (6) Calling upon the American Federation of Labour to invite representatives of all national and international unions to a special conference for the purpose of devising ways and means to "combat the menace of injunctions."

Among the officers elected for the ensuing two years were: President, M. Zaritsky; Acting Secretary, J. Roberts, 621 Broadway, New York. The Canadian representative on the general executive board is J. B. Salsberg, 346 Spadina Avenue, Toronto, 2, Ont.

International Federation of Trade Unions

The International Federation of Trade Unions has published a report on its activities during the years 1924, 1925 and 1926, to be submitted to the fourth congress of the organization, which is to be held at Paris in August. The report states that since the date of the last congress in 1923 circumstances have been very unfavourable to the growth of the trade union movement, one of the chief disruptive influences being the activities of the Communists. Many European countries continued to suffer from trade depression, accompanied by chronic unemployment. The period was remarkable for profound changes in economic life, resulting from the development of national and international trusts and cartels, and the use of "rationalizing" processes in industry, especially in the great industrial countries, causing instability in employment (a definition of the term "rationalization" will be found in the report on the work of the International Economic Conference, on page....of this issue). This depression was reflected in a decline in the membership from 16,530,000 on December 31, 1923, to 13,500,000 on December 31, 1925, the losses being mainly due to a fall in membership in Germany, where however signs of revival are now seen. Four additional countries joined the I.F.T.U. during the period under review, namely the Argentine, Lithuania, Memel and South Africa. The efforts of years to secure unity between the Germans and Czech trade union movements in Czechoslovakia were at last successful. On the other hand the Russian trade union centre showed no inclination to affiliate, though often invited to do so.

Among the Federation's recent activities the report mentions relief funds organized in connection with a lockout of Danish workers, a strike of textile workers of Bombay and the national strike and coal miners' lockout in Great Britain. In addition, the I.F.T.U. acted as intermediary in arranging loans from the affiliated national centres to the British trade union movement, these loans totalling about $868,000. A strong anti-war campaign was carried on in all countries, and a constant fight was waged for the introduction of international labour legislation in the publications of the I.F.T.U., at the International Labour Conferences, and at the sessions of the Governing Body of the International Labour Office, where efforts were made to secure the ratification of the various Draft Conventions, especially that of the eight-hour day.

The influence of the Federation, it is claimed, may be traced in the holding of the International Economic Conference at Geneva in 1927, which originated in proposals made by the Federation in 1920, as part of its program for economic reconstruction. In 1926 an International Migration Congress was held at London, convened by the International Federation of Trade Unions and the Labour and Socialist International. Summer schools were organized by the I.F.T.U. in each of the three years under review. The workers' educational activities of the various trade union centres were recorded regularly in a special press supplement, and a special committee for dealing with educational and youth questions was appointed. A committee of trade union women assists the I.F.T.U. in all questions affecting trade union women. A special committee appointed for the purpose has formulated principles outlining the standpoint to be adopted by the working class in regard to the creation of international trusts and cartels.

The I.F.T.U. publishes every week a "Press Report," issued in Danish, Dutch, English, French, German and Spanish, also an official monthly review, and a statistical Year Book. It also issues various reports of congresses, and has started the publication of its "International Trade Union Library," a special volume of which was brought out on the occasion (in 1926) of the 25th anniversary of the founding of the international trade union movement.

The report contains a full description of the organization of the Federation; its publications; the work of the international trade secretariats, the relations of the I.F.T.U. with unaffiliated trade union centres, particularly with the All-Russian Trade Union Council; the Federation's plans for world economic reconstruction, including the formation of a permanent economic organization; and its work for the promotion of social legislation, workers' education, etc.

A separate chapter deals with the relation of the International trade union movement to the League of Nations International Labour Organization. At each conference of the latter body the I.F.T.U. has placed its resources at the disposal of the labour delegates.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Possibilities of Vocational Training

THE graduating exercises of the New York Apprenticeship Commission were held recently at the Washington Irving High School, New York City. More than 5,800 boys were registered with the commission as indentured apprentices during the year, and of these approximately 850 became journeymen.

Matthew Woll, Vice-President of the American Federation of Labour, told the apprentices that their studies marked one more step forward by organized labour in America. He reminded them that organized labour had always been one of the foremost champions of the public school system in the United States and that their vocational training was merely an extension of the free, democratic American educational system into industrial life. "There was a time," said Mr. Woll, "when it was believed that the child of the worker should follow in the footsteps of his father and remain a wage-earner, and that higher positions in industry were not for them. Now, however, the child of the worker has a path opened to him to managerial and executive positions, in equal competition with the graduates of technical schools and universities. This work you have been doing is one more sign that education is becoming more and more democratized. Here we are demonstrating more clearly day after day that the interests of the American employer and wage-earner are not irreconcilably, inherently in conflict, but that they are mutual, and that no situation can arise between them which cannot be settled by agreement."

Apprenticeship in British Engineering Firms

The following extracts are taken from an article appearing in a recent issue of *Industrial Peace*:—

The great development which has taken place during the past fifty years in the engineering industry, more especially in electrical engineering, has created a demand for highly skilled artisans as well as for highly qualified engineers. Under pressure of this need individual firms have been forced to establish within their own boundaries means and methods for supplying such training to both categories of employees.

The ability of a manual worker depends upon his skill, or manual dexterity, and his knowledge of his trade; yet in the engineering industry the worker with considerable skill but no trade knowledge is still fairly common. There are, for example, few turners who know the cutting speeds of the commonly used metals. It is in such cases that well-planned vocational training, where instruction and demonstration by an expert is added to practical experience in the workshop, can increase in a short space of time the efficiency and earning capacity of the manual worker. To-day, when workshop processes have become almost entirely machine processes, the principles underlying them can be taught. It is merely waste of time to leave the worker to learn by experience the action of cutting tools on metal, the best speeds and feeds for various kinds of work and the position of a lathe tool which gives the most satisfactory results.

The provision of opportunities for such training is largely a matter of expense. Small firms cannot as a rule afford to run a works school, but short courses of instruction for the semi-skilled worker are in a few and might in most districts be arranged with the local Technical Institute on a contributory basis. For apprentices and post-graduate pupils more or less adequate training is now provided by a good many large firms in their own factories.

It is, however, in the electrical engineering industry that the most comprehensive schemes of vocational education have been devised. At the British Thomson-Houston Company's works, for example, the training of apprentices, their supervision and welfare, is amply provided for. Courses of training in twelve sections of the trade are available to general indentured apprentices, covering a period of five years from the age of 16 to 21. Every year at least two of these apprentices are chosen for transfer to the engineering or drawing office course, where they receive training that will fit them for more responsible positions, such as employment on the company's outside erection staff, work and commercial staff, or a position in charge of customers' electrical plant. Apprentices who show special aptitude may be drafted into the production and inspection departments to become familiar with the problems of high quality and quantity output; or those who desire to specialize can find opportunities for acquiring the necessary training in the design and manufacture of magnetos, radio apparatus or switchgear. The rates of pay for engineering apprentices run from 10s. to 14s. during their first year, rising to 21s. and 27s. during their fifth year, exclusive of a service and supplementary bonus, the former dependent on con-

duct and regularity, the latter on examination results. In addition to the training provided by the company, apprentices are required to study the theory of their trade at the Rugby Evening Technical Classes.

A secondary school or a public school education, a good report from his headmaster, and a clean bill of health are required of every apprentice entering the British Thomson-Houston Company's service. Older student apprentices must have achieved the engineering degree or diploma of a college or university recognized by the company. To such the company offers a three-years' training, divided into three branches—electro-mechanical, electrical and research—designed to qualify the student for associate membership in the principal scientific societies, such as the Institutes of Civil, Mechanical and Electrical Engineers. Here the rates of pay run from 25s. to 30s. a week, *plus* a current cost of living allowance, which is also available for the younger pupils.

The training courses for student apprentices and for chemist apprentices are designed to give the essential technical and theoretical equipment to youths who have completed their general education at a university or college, and who are recommended by their professor as suitable for the profession of engineering.

An equally complete scheme of vocational training is in operation at the Metropolitan Vickers Electrical Company's works with slight differences of detail.

Although trade apprentices are occasionally admitted direct from the primary school, preference is given to applicants who have passed through a junior technical, central, or secondary school. Like the British Thomson-Houston Company, the Metropolitan Vickers Company insist upon a high standard of physical fitness, good conduct, and a probationary period of six months in the works before final acceptance. Selected probationers are then indentured until the age of 21 in one of the six trades—fitting, turning, moulding, pattern-making, armature winding or instrument making—where the training of apprentices is confided to qualified instructors and where the boy's progress is tested at half-yearly examinations. Success at these examinations renders an apprentice eligible to compete for scholarships tenable at the Manchester College of Technology. Ten free scholarships of two years duration are offered annually by the company. These include a part-time day course of technical instruction. In addition to this a full-time course free scholarship has been endowed by the armaments committee for boys who show outstanding ability and exceptional character during their period of apprenticeship.

Consolidated Mining and Smelting Company's Medical Agreement

The Consolidated Mining and Smelting Company of Canada recently submitted a new medical agreement to its employees on the payroll of the Tadanac Reduction Plant at Trail, B.C. The agreement is the result of twelve months' study and negotiation between the doctors comprising the Trail-Rossland clinic and the medical subcommittee of the Workmen's Co-operative Committee. It bears the official stamp of the Company's approval and also has the overwhelming support of the employees whom it primarily concerns. The popularity of the new agreement, which is to go into effect at an early date, is evidenced from the result of the poll, which showed 2264 "for" as opposed to 101 "against" the contract. The substance of the proposals is as follows:

For an additional twenty-five cents per man per pay, the employee and his dependents will obtain the following services, viz:—

Full and complete medical and surgical treatment including any and all operations for himself and his dependents.

All confinements to be covered at a fixed rate of twelve and one-half dollars per case irrespective of services rendered.

When it is considered necessary to administer an anaesthetic for the extraction of teeth for himself or his dependents, the same to be given by the doctors free of charge.

All drugs to be supplied free of charge for employee and his dependents.

Employees will only be called upon to pay twenty-five cents every two weeks in addition to what they are already assessed under the old medical agreement which is $1.30 per month payable sixty-five cents every two weeks.

Widows and dependents of a deceased employee are also to be included in the medical contract free of charge.

Members of the Benevolent Society will not be charged for any certificates issued by the doctors for the said society.

In order to make it possible to successfully negotiate this contract with the doctors, the company is also making a donation of fifteen cents per man per pay.

Thus for a slightly increased monthly fee each and every man on the pay-roll will be the recipient of much larger concessions in medical treatment.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Tenth Session of the International Labour Conference

THE Tenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from May 25 to June 16.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Nine previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (LABOUR GAZETTE, December, 1922); Geneva, Switzerland, 1923 (LABOUR GAZETTE, December, 1923); Geneva, Switzerland, 1924 (LABOUR GAZETTE, August, 1924); Geneva, Switzerland, 1925 (LABOUR GAZETTE, July, 1925); Geneva, Switzerland, 1926 (LABOUR GAZETTE, July, 1926); Geneva, Switzerland, 1926 (LABOUR GAZETTE, July, 1926).

It will be observed that only one Session of the Conference had been held annually, until 1926, when the Eighth Session was followed immediately by the Ninth. The Treaty of Peace required that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year.

Each Member State is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

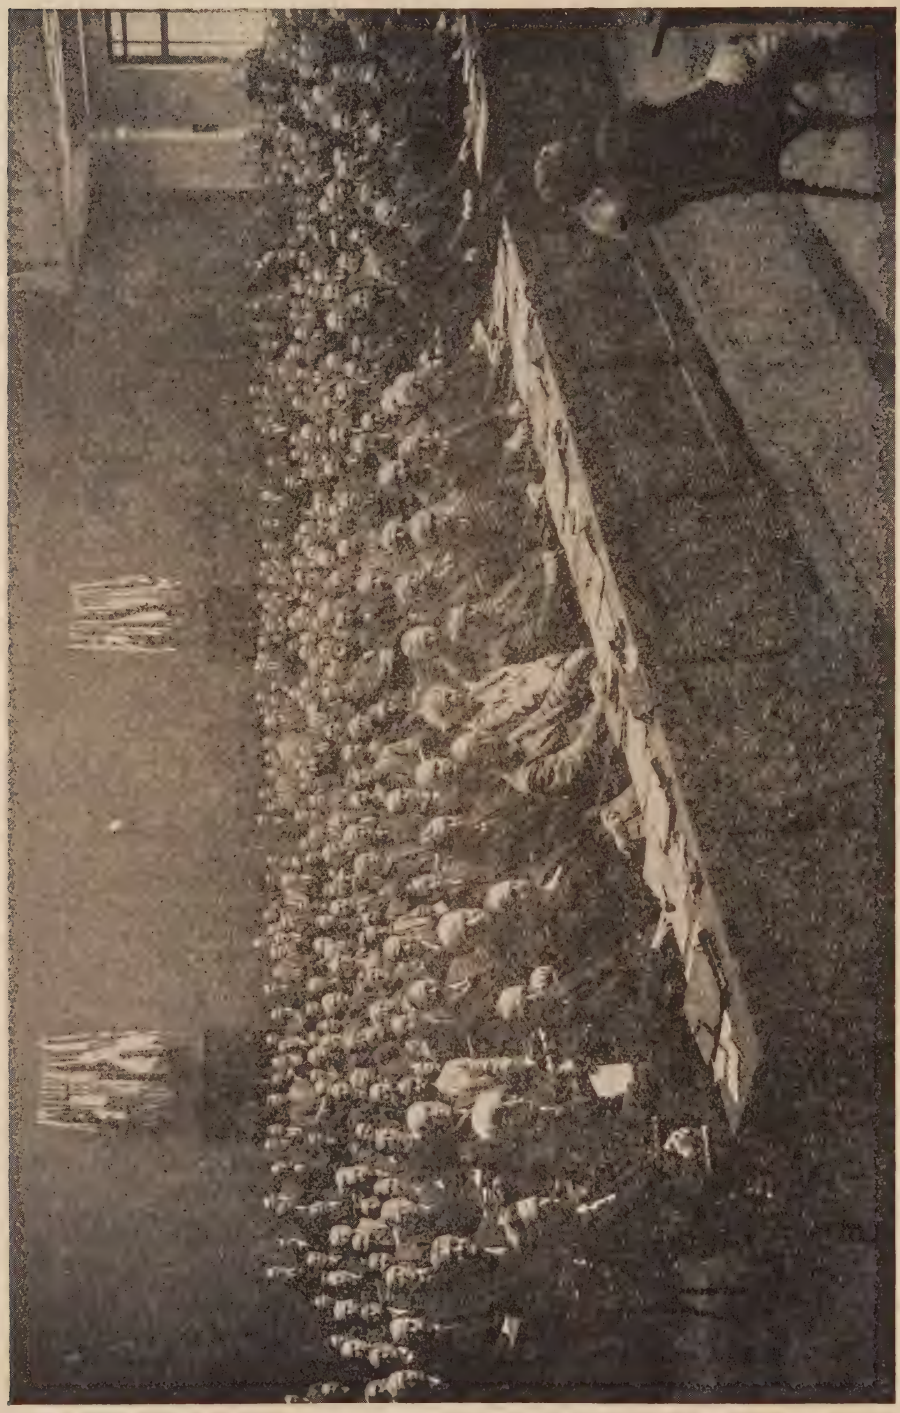
The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Decisions of the Conference

The Agenda of the Tenth Session of the Conference comprised three main subjects, namely, the proposed adoption of a draft convention or recommendation concerning Sickness Insurance for workers, and the preliminary consideration of draft questionnaires relative to Minimum Wage-Fixing Machinery and Freedom of Association.

The decisions of the Conference may be summarized as follows:—

Sickness Insurance.—By 97 votes to 9 the Conference adopted, on final vote, a Draft Convention concerning sickness insurance for workers in industry and commerce and domestic servants.



By 85 votes to 9 the Conference adopted, on final vote, a Draft Convention concerning sickness insurance for agricultural workers.

By 99 votes to 0 the Conference adopted, on final vote, a Recommendation concerning the general principles of social insurance.

By 79 votes to 0 the Conference adopted a Resolution authorizing inquiry into methods of overcoming obstacles to insurance in sparsely populated countries.

Freedom of Association.—The Conference rejected by 54 votes to 42 a proposed Draft Questionnaire concerning freedom of association and, as it was found impossible to agree on a text, it was decided by 66 votes to 28 not to place the question on the Agenda for next year.

Subsequently, in view of the difficulty experienced in this matter, the Conference unanimously invited the Governing Body to examine and submit next year proposals for the modification of the double discussion procedure.

DELEGATES IN ATTENDANCE AT THE TENTH SESSION OF THE INTERNATIONAL LABOUR CONFERENCE
Canadian delegation in second row (right).

Minimum Wage-Fixing Machinery.—The Conference adopted by 80 votes to 19 a Draft Questionnaire concerning minimum wage fixing machinery, and decided by 89 votes to 22 that this question should be placed on the Agenda for next year.

Application of Conventions.—The Conference adopted unanimously the findings of a Committee which had examined the annual reports of Governments on the application of ratified Conventions. The Committee, while making suggestions as to the contents and date of the reports, concluded that, although complete satisfaction with the application of Conventions could not be recorded, valuable results had been achieved.

Standing Orders.—The Conference adopted unanimously amendments to the Standing Orders relating to the election of Committees by the Government Group, to the secretariats of Committees, and to the interpretation of speeches delivered in non-official languages; also, by 82 votes to 23, an amendment concerning official translations of Conventions and Recommendations in non-official languages.

Resolutions.—The Conference adopted unanimously Resolutions relating to old age, invalidity, etc., insurance; contracts of employment; collective disputes; education and entry into employment; and native labour problems. It adopted by 60 votes to 24 a Resolution relating to the hours of work of commercial employees. It referred to the Governing Body a Resolution relating to representation for native workers in the Conference.

Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, forty-three sent delegations to the Tenth Session. In all but eleven cases these delegations were "complete" in that they consisted of representatives of organized employers and workers as well as of Governments. In eight cases the delegations consisted only of Government members, and in the three other cases the countries were represented by employers' representatives, but no workers' delegates. A list of the countries represented follows:—

Albania,
Argentine Republic,
Australia,
Austria,
Belgium,
Bolivia,
Brazil,
Bulgaria,
Canada,
Chili,
China,
Colombia,
Cuba,
Czechoslovakia,
Denmark,
Esthonia,
Finland,
France,
Germany,
Great Britain,
Greece,
Guatemala,
Hungary,
India,
Irish Free State,
Italy,
Japan,
Latvia,
Luxemburg,
Netherlands,
Norway,
Poland,
Portugal,
Roumania,
Salvador,
Serb-Croat-Slovene Kingdom,
Siam,
South Africa,
Spain,
Sweden,
Switzerland,
Uruguay,
Venezuela.

Canadian Delegation

The Canadian delegation in attendance at the Conference was as follows:—

Government Delegates.—Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland; and Mr. R. A. Rigg, Director of the Employment Service, Department of Labour, Ottawa, Canada.

Technical Advisers to Government Delegates.—Mr. L. L. Peltier, Legislative Representative of the Order of Railway Conductors, Ottawa, Canada; and Mr. Joseph Comeau, of the Federation of Catholic Workers of Canada, Montreal, Quebec.

Employers' Delegate.—Mr. W. C. Coulter, Vice-President and General Manager, Booth-Coulter Copper & Brass Co., Ltd., Toronto, Ont.

Technical Adviser to Employers' Delegate.—Mr. H. W. Macdonnell, Secretary, Industrial Relations Department, Canadian Manufacturers' Association, Toronto, Ont.

Workers' Delegate.—Mr. P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Montreal, P.Q.

Appointment of Committees

Committees were appointed by the Conference as follows:—

Selection Committee.—Twenty-four members: 12 Government delegates, 6 Employers' delegates, and 6 Workers' delegates, nominated by the respective groups.

Canada was represented on this Committee by Dr. W. A. Riddell in the Government group and Mr. P. M. Draper, in the Workers' group.

Standing Orders Committee.—Twenty-four members: 8 Government, 8 Employers' and 8 Workers' delegates.

Mr. P. M. Draper represented Canada on this Committee as a member of the Workers' group, and Mr. W. C. Coulter as a substitute representative from the employers'.

Committee on Freedom of Association.—Thirty-six members: 12 from each group.

Canada was represented on this Committee by Mr. R. A. Rigg, of the Government group.

Committee on Sickness Insurance.—Sixty-three members: 21 from each group.

Canada was represented in the Employers' group by Mr. W. C. Coulter and in the Workers' group by Mr. J. T. Foster.

Committee on Minimum Wages.—Thirty-nine members: 13 from each group.

Canada was represented on this Committee by Dr. W. A. Riddell on the Government group and Mr. W. C. Coulter on the Employers' group.

Committee on Article 408 of the Treaty of Versailles.—Twenty-seven members: 9 from each group.

Canada was represented in the Employers' group by Mr. Coulter as a substitute member.

Officers of the Conference

The following were elected as officers of the Conference:

President.—Sir Atul Chatterjee, K.C.I.E., High Commissioner for India in London.

Vice-Presidents.—His Excellency G. de Michelis (Italy); Mr. H. C. Oersted (Denmark), and Mr. Ricardo Caballero (Spain).

Mr. Albert Thomas, Director of the International Labour Office, acted as Secretary-General of the Conference, and Mr. H. B. Butler, Deputy Director of the International Labour Office, acted as Deputy Secretary.

Address of Chairman of the Governing Body

Mr. Arthur Fontaine (Government delegate, France), Chairman of the Governing Body of the International Labour Office, presided at the opening of the Conference. In the course of an address which he delivered in calling the Conference to order and welcoming those in attendance, Mr. Fontaine spoke as follows:—

"Slowly, but surely, in our industrial civilization, which is so much criticised, but which is nevertheless such a living force, continuous improvement is being effected in the conditions of the workers through the efforts of workers' organizations, enlightened employers and Governments in touch with popular aspirations. It is a work which will never be finished, for, according as man perfects the means of production, it is necessary that the workers, like other sections of the community, should receive in the form of increased leisure and remuneration their legitimate share in the increased capacity of industry. It would be idle to deny the favourable results to be achieved by this evolution.

"Let us consider certain characteristic examples during the past fifty or eighty years.

"In Great Britain, in 1833, the forty-eight hour week was granted. . . to whom? To children from 9 to 13 years of age. Young persons from 13 to 18 years had a sixty-nine hour week; in 1847 the working day for women and young persons was limited to ten hours.

"In France, in 1848 the law fixed hours of work for adults and young persons at twelve per day. In 1900 ten hours was fixed as the working day for young persons, women and adult men working with them.

"In Germany, working hours for women were reduced to eleven in 1891, and in this year Parliament rejected a Bill limiting hours of work of adults to eleven. In 1908 hours of work for young persons and women were ten per day.

"You are aware that these countries, and many others in Europe and other parts of the world, have now practically adopted forty-eight hours as the normal working week.

"In association with this evolution in working hours, the age of admission to employment has increased from 9 to 13 and 14, and the schools received children at the ages when, fortunately, the factory was closed to them. At the same time also, night work of women and young persons disappeared.

"Hygiene made progress in the factory and outside it, thanks to increased knowledge on the subject and increased facilities. The following figures indicate the progress in this sphere. From 1881 to 1925 infantile mortality decreased by 45 per cent in Great Britain, Germany and France; and by 67 per cent in Switzerland and the Netherlands. General mortality decreased by 22 per cent in France, 37 to 38 per cent in Great Britain and Italy, 41 per cent in Switzerland and 48 per cent in Germany. The average life, which was 36 to 40 years in the same countries in 1845, now varies from 47 years in Germany to 55 years in the Netherlands.

"The purchasing power of wages, i.e., the real wage which takes account of the cost of living, has considerably increased. During the past 40 years the increase has been more than 50 per cent in Denmark, 30 to 40 per cent in Great Britain and Sweden. During the past 30 years the increase has been 20 to 40 per cent in mines in France and Germany. The move-

CANADIAN DELEGATION IN ATTENDANCE AT THE TENTH SESSION OF THE INTERNATIONAL LABOUR CONFERENCE

(Left to right) J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Montreal; Joseph Comeau, of the Federation of Catholic Workers of Canada, Montreal; L. L. Peltier, Legislative Representative of the Order of Railway Conductors, Ottawa; H. W. Macdonnell, Secretary, Industrial Relations Department, Canadian Manufacturers' Association, Toronto; W. C. Coulter, Toronto (Employers' Delegate); P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa (Workers' Delegate); R. A. Rigg, Director of the Employment Service of Canada, Ottawa (Government Delegate); Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva (Government Delegate).

ment has been held up in the countries which suffered most during the war. It should, however, be remembered that the eight-hour day has been established there without a reduction in real wages.

"Parallel with this evolution, and explaining it to a certain extent, there may be noted a great increase in the number of organized workers, and a great increase in the power of machinery. You are all familiar with these aspects of the question. The development of consumers' co-operative societies is perhaps less widely known; their number in 1920 was four or five times their number in 1890, and reached the figure of ten million persons.

"What shall we say of social insurance, workmen's compensation, insurance against sickness, old age and unemployment, a sphere in which the marvellous developments of the past 45 years tend to ensure to the worker means of existence when he is unable to gain ordinary wages by ordinary work. It is a logical and effective form of the workers' mortgage on the capital which their labour has contributed to create. This has been and will be one of your chief concerns in the Convention which you draw up.

"In noting these facts I am far from concluding that enough has been done for the workers, and that the situation is completely satisfactory. I have already said what I thought on this matter. I desire to draw only the following conclusion: no economic system renders useless our persevering efforts for the increase in the output of labour and the improvement of the workers' conditions. Let us work then with conviction, with patience, but with perseverance in our International Labour Conferences to accomplish that work of social justice and peace which is entrusted to us by our Constitution."

The President's Address

Sir Atul Chatterjee, on his election as President of the Conference, said he recognized that in electing him to the chair, the Conference had desired to pay a compliment to the country he represented. Relations between the International Labour Organization and India had been of the most cordial and intimate character from the very inception of the Organization, and the decisions of the successive sessions of the Conference had exercised a great influence on the minds of the Indian people and their parliament in shaping legislation to meet the growing industrialism of the country. To his mind, the success of the International Labour Organization lay especially in the fact that it set up international standards in regard to labour conditions. The work of the Organization could not be properly appreciated by regarding it simply as an international legislating authority. Its Draft Conventions and Recommendations were having a profound influence even in countries where immediate effect could not be given to them.

Sir Atul said:—

"The conception fondly cherished by the man in the street is that production in the so-called primitive countries in Asia is limited to the raising of agricultural produce mainly for local consumption, the surplus being available for export to the advanced countries of Europe and America, either for consumption as food or to be used as raw material for manufactures. It is also a popular belief that Europe, with all the resources of a complex civilization, is bound to develop at a more rapid rate than the ancient and decadent countries of Asia. Few people realize that, in the twelve years between 1913 and 1925, while the total volume of production in the whole world may be described as having increased by 18 per cent, the increase in the countries in Asia has been 24 per cent, or a third greater than the world increase. Similarly, while the volume of world trade during the same period may be said to have increased by only 5 per cent, the increase of the trade of Asiatic countries has been as large as 36 per cent. Examination of statistics reveals the further interesting and important fact that the silent and almost unperceived development that is in progress in the Asiatic continent is not limited to the production of agricultural commodities, but that there is a remarkable advance in manufactures. For instance, in the twelve year period to which I have referred, China, Japan and India have each in varying degrees increased the proportion borne by manufactured goods to the total volume of their exports. It has to be borne in mind that the population of China is estimated to exceed 400 millions, the population of India is nearly 320 millions and the population of Japan approaches 60 millions. The home manufactures of these countries are now supplying not only the growing requirements of their own population to a larger extent than before, but the exports of these manufactures are increasing both in volume and value. The same fact is illustrated by the phenomenal increase that has taken place in these countries in the number of people engaged in organized industries. The factory population of India has more than trebled in the last twenty-five years and the mining population has more than doubled. In Japan the factory population has more than doubled in the

thirteen years between 1909 and 1922. These remarkable developments are not limited to the large countries in the Asiatic continent. The same process of development and growing industrialization is manifest in other countries such as Afghanistan, Persia, and Turkey in the west, and Siam, the Federated Malay States, Cochin China and Java in the East.

"It is therefore only right that the International Labour Organization, in its study of the many problems affecting the welfare of workers throughout the world, should bear prominently in mind the vast numbers of workers in Asiatic countries and also the rapid development that is now evident there of industry and manufacture on modern lines. So long as the great bulk of workers in Asia were employed in agricultural labour in peasant holdings belonging to themselves or to very near relations, the problems of labour were neither acute nor complex. But the position is now rapidly changing. What is happening to-day in Asia is probably also happening in the great continent of Africa or will happen to-morrow.....

"Ladies and gentlemen, the profound influence that has been exercised on recent industrial legislation in Japan and India by the decisions of this Conference and by the activities of the Office is known to you all....

"The miseries, privations and injustices attendant on unregulated industrialism constitute a grave menace to the culture and philosophy which are the proud heritage of Asiatic races. Our ancient traditions and civilizations must be preserved, but they require to be adjusted to the new environment which industrialization inevitably produces. We hope and believe that this Organization can and will make a valuable contribution towards harmonizing the serene attitude towards life, which is the peculiar characteristic of the East, with the strain and stress of a new Age."

The Director's Report

The Annual Report of the Director of the International Labour Office was presented in two parts and was under discussion at several successive sessions of the Conference. A summary of the Annual Report in question appears elsewhere in the present issue of the LABOUR GAZETTE. Part I of the Report gave a review of the various activities of the International Labour Organization, the first section dealing with the work of the Organization—its internal development and its external relations—and the second section consisting of an analysis of the results produced. Part II, as usual, comprised a summary of the annual reports presented to the International Labour Office by various countries on the measures which had been taken by them to give effect to the different Conventions.

More than fifty delegates, representing the governments, employers or workers of some thirty different countries, took part in the discussion of the Director's Report. The speeches delivered ranged over a wide field of questions touching the work of the Organization—national social policy in relation to international labour legislation, internal organization and practice; interpretation; relations between the Office in Geneva and the member states of the International Labour Organization; subjects for future examination etc. As at preceding sessions, the progress of the ratification and application of international labour conventions claimed the most attention. Workers' delegates complained that the progress was unduly slow; Government delegates contended that it was as fast as national economic conditions and other circumstances would permit; employers' delegates suggested that more speed might be imprudent. But through all the speeches there ran an unbroken chain of loyalty to the Organization and a desire to assist its advance towards the attainment of the objects for which it was created. Criticism and conflict of opinion were by no means absent, but the speeches for the most part were moderate and restrained in tone, and the general atmosphere was calm and dispassionate.

Canadian Delegate's Address

Dr. W. A. Riddell, Canadian Advisory Officer to the League of Nations in Geneva, who was one of the two Canadian Government delegates in attendance, took part in the discussion of the Director's Report on June 10. He stated that Canada continues to maintain her interest in the International Labour Organization, and explained the steps which have been taken to bring the Conventions and Recommendations of the International Labour Conference before the Federal and Provincial authorities. It was, he said, intended to hold a Federal-Provincial conference this autumn to consider what further action can be taken on these matters. In Canada great progress had been made in social legislation in certain respects but because of our Federal constitution and the division of legislative authority between the Dominion and the Provinces, our present position on some of these subjects was not adequately disclosed in the publications of the International Labour Office. He hoped that the International Labour Office would be able to devise some method of recording at regular intervals the progress which was being made by federal countries in bring-

ing their legislation into conformity with the Conventions and Recommendations of the International Labour Organization.

The question of the minimum wage had received very considerable attention in Canada. Seven of the nine provinces have minimum wage fixing machinery. Mention was also made of the fact that legislation had been passed by the Dominion Parliament at its last session providing for the establishment of a system of old age pensions in co-operation with the provinces. Continuing, Dr. Riddell spoke as follows:—

"The Director in the first pages of his Report shows considerable anxiety with regard to certain developments in the New World which might seem to indicate that there is some public opinion in favour of duplicating in the New World the machinery which has been set up at Geneva for international co-operation. References have been made to this here in the debate on the Director's Report, and I do not wish to comment further on this development than to point out that I am not nearly so apprehensive of what may be done in the New World as I am of what we are doing here. If Geneva is to retain her leadership in world-wide co-operation, she must not forget the fundamental principles of international world-wide co-operation. Fairer representation must be given to overseas countries in every department of the work of this Organization, and greater consideration given to their needs and problems. If the International Labour Organization fails to retain its hold upon the New World, it will be because it has failed to interpret the spirit and life of that continent, and because too frequently, consciously or unconsciously, the major voting power of Europe has been used to force New World social legislation into Old World moulds."

In conclusion, Dr. Riddell commented with satisfaction on the decision which had been made by the Governing Body of the International Labour Office to make the International Labour Maritime Commission more representative of non-European countries. The action of the Governing Body in this respect gave evidence of a growing desire to grant fairer representation to overseas members.

Director's Reply

M. Albert Thomas, the Director of the International Labour Office, replied on June 10 to the discussion of his annual report. He thanked those who had taken part for the spirit of optimism and even of indulgence which had characterized their remarks. His report as Director had not been adversely criticised. To his mind, the most important problem before the International Labour Organization was that of securing the ratification and application of the various Conventions. The number of ratifications reported this year was 229, as compared with 194 a year ago. There had thus been an advance, while at the same time there was a tendency for the rate of progress to become slower. The Director referred at considerable length to the efforts which were being made to secure the ratification of the various Draft Conventions, with particular reference to the Eight-Hour Day. The problem of ratification of Conventions involved constitutional and economic questions, but it was above all a political and moral problem and the progress made in this sphere depended, therefore, on the goodwill which existed in the various States. The great source of improvement in the authority and strength of the International Labour Organization lay in the constant development of working class consciousness and the aspiration of all producers and workers in the great industrial countries towards a more dignified and worthy life. Personality should be developed by the provision of greater leisure for the workers and by the elimination of the fearful scourge of unemployment. At the moment the workers' aims were divided; nevertheless all were in agreement in demanding ratification of the Conventions.

In conclusion, the Director quoted the following words which he had read recently on the library door of an economic institute in Kiel: "For the man whose soul in times of doubt is doubting, does but make the evil greater and spread it farther abroad. But he who goes steadfastly forward to bring the idea to reality, moulds the world to his will."

Credentials Committee's Report

The Credentials Committee, in its report, stated that the total number of delegates to the Conference was 145, representing 43 states. Only 142 delegates, however, were entitled to vote. The employers' delegates of South Africa, Brazil and Norway were entitled to take part in the discussions alone, since the governments of these countries had not appointed workers' delegates. Several countries had sent delegations consisting only of Government members. This year the countries with incomplete delegates were, however, less numerous than on former occasions.

Protests had been lodged against the absence of a South African workers' delegate and against the appointment of the Czechoslovak workers' delegate, the technical adviser

to the Hungarian workers' delegate, the Italian workers' delegate, the Bulgarian workers' delegate and the Cuban workers' delegate. These protests were investigated by Committee.

With regard to the Hungarian workers' adviser, the Committee considered that the protest should not be accepted.

In the case of the Cuban workers' delegate, it was found that the nomination had not been made in a manner contrary to Article 389 of the Treaty, but that the procedure adopted by the Government differed from that followed in previous years. The Committee expressed a wish that in future the Government would resume its former custom.

The majority of the Credentials Committee joined in the hope that next year the Czechoslavak Government would endeavour to arrive at an agreement between the various workers' organizations of that country. The Workers' Representative on the Committee considered that the Government had failed to observe the Treaty by omitting to consult the Trade Union Federation, composed of the German Trade Unions and the Czechoslavak Trade Unions.

The Committee, while unable to agree that the appointment of the Bulgarian workers' delegate was contrary to Article 389 of the Treaty, considered that there had been a misunderstanding by the Government of the expression "the most representative organizations" and hoped that the Government would take steps to remedy this state of affairs next year.

Protests against the selection of the Italian workers' delegate were based on the ground that this nomination was made in violation of the letter and spirit of Article 389 of the Treaty, as the Fascist corporations could not be regarded as representing the interests and aspirations of the Italian workers. The Italian delegation in reply contended that the National Confederation of Fascist Trade Unions was really the most representative organization of the Italian workers. The majority report of the Committee expressed the view that the Italian workers' delegate and his advisers were appointed in accordance with Article 389. The Workers' Representative on the Committee, however, presented a minority report in which he contested the claims of the Italian delegation on the ground that freedom of association and trade union rights were completely denied by both law and practice in Italy, and that the Fascist corporations did not and could not represent the workers' interests. The protest against the credentials of the Italian workers was supported by a memorandum which purported to show that in Italy freedom of association did not exist. In support of the opposite view, the Italian Government presented a statement to the effect that the National Confederation of Fascist Trade Unions not only comprised the immense majority of Italian workers, but also constituted under Italian law the only organization entitled to represent Italian workers as a whole.

The reports submitted by the Credentials Committee were adopted in all cases. In the case of the report on the credentials of the Italian workers' delegate, the Committee report was confirmed by 82 votes to 32.

Sickness Insurance

The Committee to which the subject of Sickness Insurance had been referred submitted two proposed Draft Conventions, one relating to sickness insurance for workers in industry and commerce, out-workers and domestic servants, and the other relating to agriculture. These two Draft Conventions, as drafted by the Committee, were in identical terms, relating to industry, commerce, out-workers and domestic servants in the one case, and to agricultural workers in the other.

The report of the Committee was discussed at considerable length in the Conference. A number of amendments were proposed in the course of the discussion but none of these was adopted and the Draft Conventions were, therefore, approved in the form in which they had come from the Committee.

The Committee further proposed the adoption of a Recommendation and a Resolution concerning the general principles of sickness insurance, which were both adopted by the Conference without division.

Freedom of Association

As already intimated, the proposed draft questionnaire on the subject of Freedom of Association was rejected by the Conference, and as it was found impossible to agree on a text, this question will not appear on the agenda of the Conference next year as had previously been intended. At the opening of the Conference the subject of Freedom of Association was referred to a Committee for examination and report. The Committee prepared a draft questionnaire for submission to the various member states of the International Labour Organization, with the object of obtaining data on which the International Labour Office could draft a Convention or Recommendation for submission to the International Labour Conference next year. The Committee in its report pointed out that the right of association for all lawful purposes

by the employed as well as by employers was among the principles affirmed in the Peace Treaties. The Chairman of the Committee in submitting the report called attention to certain questions which had arisen, notably the extent to which freedom of association should be dealt with by international labour legislation; the question of safeguarding individual liberty, which as a matter of fact was a subject for the sovereign laws of each country; and the desire of the Polish Government to include intellectual workers in the proposed questionnaire.

Mr. R. A. Rigg, one of the two Canadian government delegates, who was a member of the Committee on Freedom of Association, in discussing certain amendments proposed to the draft questionnaire as submitted to the conference by the Committee, expressed the opinion that a simple form of questionnaire, which would confine itself very largely to the principle of freedom of association, was best calculated to elicit from the Governments of the member states full and clear statements of their views regarding the subject. He pointed out that this was only the first discussion of the matter, and that under the double discussion procedure nothing final or conclusive could be reached at that conference. He indicated that his votes on the questionnaire, as drafted by the Committee, and the amendments relating thereto, would be in accordance with the conditions prevailing in Canada, which were in the main considered by the Government, the employers and the organized workers, to be tolerably satisfactory. The Criminal Code of Canada made it an offence for two or more persons to do or procure to be done any unlawful act in restraint of trade. For the purpose of exempting trade unions from the application of this section another section had been embodied in the Code providing that "the purposes of a trade union are not by reason merely that they are in restraint of trade unlawful within the meaning of the preceding section." He also pointed out that the Trade Union Act of Canada provides that "the purposes of any trade union shall not by reason merely that they are in restraint of trade, be deemed to be unlawful so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise, or so as to render void or viodable any agreement or trust." Further, the Government of Canada had in 1918 passed an order-in-council, one clause of which specifically asserted the right of workers to organize, in the following terms: "All employees have a right to organize in trades unions and this right shall not be denied or interfered with in any manner whatsoever, and through their chosen representatives they should be permitted and encouraged to negotiate with employers concerning working conditions, rates of pay, and other grievances." Again, in the year 1919 and prior to the holding of the Washington conference, a Royal Commission on Industrial Relations appointed by the Government of Canada, had, following an exhaustive investigation, asserted their belief that "the day has passed when any employer should deny his employees the right to organize," and expressed the view "that employers gain nothing by their opposition, because, notwithstanding such opposition, their employees do organize, and the refusal thereby creates in their minds a rankling sense of injustice." Mr. Rigg continued: "This sentiment has been approved and re-echoed by responsible Ministers of the Crown, including the Prime Minister of Canada, as well as many other public minded individuals. I am not attempting to convey the impression that we have no industrial disputes in Canada, or that the relations existing between employers and employees are ideal. I do, however, maintain, that it is true that a large measure of sympathetic understanding does exist between employers and their organized workers, which tends materially to reduce strain and friction. We have not attained Utopia, but we are heading in the right direction."

Mr. Mertens, the Workers' Delegate from Belgium, submitted certain amendments to the Committee's report desired by the Workers' group in attendance at the Conference. The amendments proposed by Mr. Mertens were rejected by a vote of the Conference. The vote on the draft questionnaire as a whole was deferred until a later sitting. Before this vote was taken, Mr. Mertens stated that the Workers' Group would vote against the questionnaire and against placing the question on the agenda of the next Session of the Conference. No one, he said, attached more importance to the right of association than did the workers. The possibility of obtaining a Convention to protect trade union liberty in those countries where the workers were not sufficiently strong to protect that liberty themselves was regarded as very important. It was at the request of the workers that this question was placed on the agenda of the present session. In view, however, of the refusal of the Conference to accept a questionnaire which would really afford protection for the rights of the workers, and particularly in view of the decision to accept certain phrases proposed by Governments who were oppressing the workers in their own

countries, Mr. Mertens stated that the workers' group would take the action indicated above. On a vote, the draft questionnaire was rejected by 54 to 42, and was, thereupon, referred back to the Committee for further consideration. A compromise proposal was submitted to the Committee but was rejected. The workers' group in the Committee stated that it was impossible for them to accept the text as proposed and that in view of this situation they would vote against the placing of the question on the agenda of the next session of the Conference.

The employers' group of the committee also stated that they could not accept the questionnaire which did not embody features that they regarded as essential. In these circumstances, the Committee had nothing to propose to the Conference.

On receipt of the committee report, it was decided by 66 votes (mainly employers and worker) to 28 votes (mainly governments) not to consider this subject at next year's Conference.

Minimum Wage-Fixing Machinery

The report of the Committee of the Conference on Minimum Wage-Fixing Machinery "in trades in which organization of employers and workers is defective, and where wages are exceptionally low, with special reference to the home-working trades," was discussed at considerable length in the Conference and was adopted without amendment. The questionnaire as framed by the Committee leaves open the two most important questions of principle involved, namely: (1) whether the ultimate action adopted by the Conference should refer to both home-working and other trades, or only to one or the other; and (2) whether this action should take the form of a Convention or a Recommendation, or of a Convention for one subject and a Recommendation for the other. Complete freedom is therefore left to the Governments to reply as they think best on these points.

Draft Questionnaire

The Draft Questionnaire on Minimum Wage-Fixing Machinery approved by the Conference is as follows:—

1. Do you consider that the Conference should adopt proposals dealing with methods of minimum wage-fixing in home-working and other trades or in parts of such trades in which:—

(*a*) No arrangements exist for the effective regulation of wages by collective agreement or otherwise, and

(*b*) Wages are exceptionally low?

2. Do you consider that a definition of (*a*) home-working trades, and (*b*) other trades, should be included in any proposals which may be adopted by the Conference? What definitions do you propose?

3. Do you consider that it is for the Government of each country to decide, having regard to the conditions of the country, which are the home-working and other trades covered by Question 1?

4. What criteria (if any) would you propose to adopt for determining in which trades there are:

(*a*) No arrangements for the effective regulation of wages,

(*b*) Exceptionally low wages?

5. Do you consider that some provision should be made for a basis for fixing minimum wages? If so, what basis do you suggest?

6. Do you consider that the Conference should:

(*a*) Lay down the method or methods upon which the minimum wages should be fixed?

If so, what method or methods do you propose? Or

(*b*) Confine itself to laying down general principles?

If so, what principles do you suggest?

If not,

7. Do you consider that it is for the Government of each country to decide, having regard to the administrative practice of the country, the method or methods to be introduced in fixing minimum wages in the home-working and other trades covered Question 1?

8. Do you consider that any such method should make provision for full preliminary consultation with representatives of the trade concerned, including representatives of organizations of employers and workers (if any) and with any other persons specially qualified by their trade or functions to be usefully consulted?

9. Do you consider that employers and workers should be represented on the wage-fixing body? If so, do you consider that they should be represented in equal numbers?

10. Do you consider that any minimum wage-fixing body should contain an independent person or persons?

11. What methods do you consider should be adopted in selecting and appointing:

(*a*) The representatives of employers and workers,

(*b*) The independent person or persons?

12. What systems of inspection, general supervision and enforcement do you propose for ensuring the payment of wages in the trades concerned at not less than the rates fixed?

13. Do you consider that the Governments should communicate to the International Labour Office, either in the annual report furnished in accordance with Article 408 of the Treaty or otherwise in the case of a Recommendation, the list of trades in which the system of fixing minimum wages has been applied, together with the approximate number of workers covered, and a general statement on the minimum rates of wages and other conditions established in the trades concerned?

14. Do you consider that the Conference should proceed by way of a draft Convention or a Recommendation or both? If the latter, in what respects should either form of decision be adopted?

Standing Orders of the Conference

The Report of the Standing Orders Committee, presented by Mr. Mahaim, Government delegate from Belgium, dealt with a number of proposals for the amendment of the Standing Orders of the Conference, emanating from the Eighth and Ninth Sessions of the Conference and from the German Government. The following were the main points of the Report, which after some discussion, was adopted:

The Committee proposed the adoption of amendments to Article 21 of the Standing Orders, intended to regulate and facilitate the election of members of Committees by the Government Group.

The Committee recommended the rejection of a proposed amendment to Article 7, relating to the appointment of substitute members of Committees.

The Committee recommended the rejection of an amendment for the establishment of proportional representation in the Group elections, on the ground that the question was one which could be left to the discretion of the Groups themselves.

The Committee recommended that no amendment should be made with regard to the validity of protests by international industrial organizations against the appointment of non-Government delegates to the Conference, being of the opinion that the Credentials Committee had the right to examine protests against credentials, by whomsoever they might be made.

The Committee recommended an amendment to Article 21 to validate the procedure hitherto followed by the Groups in entrusting the office of secretaries of the Groups to persons who were neither delegates nor technical advisers.

The Committee recommended an amendment to Article 11, relating to the interpretation of speeches made in the Conference in languages other than the official languages—English and French. Article 11 as it stood provided that a delegate might speak in his own language, but his delegation must provide for a summarized translation into one of the two official languages by an interpreter attached to the delegation. The amendment was for the addition of the words "unless an interpreter in the Conference for the official languages can be placed at its disposal by the Secretariat of the Conference."

Use of the German Language

A report was also received from the Standing Orders Committee of the Conference and adopted on the question of a German official text of Draft Conventions and Recommendations. The report recommended the addition to Article 6 of the Standing Orders of the following new paragraph:

> After the adoption of the French and English authentic texts, official translations of the Draft Conventions and Recommendations may, at the request of interested Governments, be drawn up by the Director of the International Labour Office, and deposited with the Secretary-General of the League of Nations. It will be open to the Governments concerned to consider such translations as authoritative in their respective countries for the application of the Conventions and Recommendations.

The report of the Standing Orders Committee was adopted by 82 votes to 23.

Turkey and the International Labour Organization

Greetings were extended by the Conference to His Excellency Shukri Kaya Bey, President of the Foreign Affairs Committee of the Turkish Parliament, who was attending the Conference as observer on behalf of the Turkish Republic. The President of the Conference mentioned that relations had already been established between the International Labour Organization and the Turkish Government and that the presence of a representative of the Turkish Republic offered further evidence of the interest of his Government in labour questions. His Excellency Shukri Kaya Bey in reply stated that the Turkish Republic, after accomplishing its social revolution—for example the suppression of polygamy and the adoption of a new and enlightened Civil Code—was naturally much interested in social problems. He expressed the hope that the work of the International Labour Conference would be crowned with success.

Resolutions of the Conference

The Conference considered a number of Resolutions submitted by delegates which had been examined (and in some cases revised) by the Selection Committee. The texts of these Resolutions follow:—

Sickness Insurance

The following Resolution was adopted unanimously on recommendation of the committee of the Conference which had also dealt with the Draft Convention and Recommendation concerning sickness insurance:—

Whereas in certain regions of several countries, both European and extra-European, the organization of the medical benefit of compulsory sickness insurance meets with great obstacles arising out of the sparseness of the population, the long distances and the scarcity or difficulty of the means of communication;

Whereas these obstacles also arise in connection with the organization and working of the general health services and poor relief system, and for this reason experiments have been made, and methods yielding useful results have been employed in order to overcome them, among those methods being the following:—

(*a*) The unification of all health services in such a way as to provide the population with the benefit and the doctor with adequate remuneration;

(*b*) The diffusion of general instruction on health matters, the authorization of nurses, practitioners, midwives and other persons engaged in professions connected with health, to perform, in exceptional cases, certain functions usually reserved to doctors;

(*c*) The establishment of dispensaries in the centre of certain areas and the organization of periodical tours to be made by doctors according to definite itineraries, of which the population has been notified beforehand;

(*d*) The granting of subsidies by the State to the sickness funds or local authorities which organize methods of communication, place means of transport at the disposal of doctors or encourage instruction in health matters, etc.;

(*e*) The imposition upon insured persons and local authorities of part of the additional cost of the benefit when the latter has to be administered outside a prescribed limit;

Whereas the object of the medical benefit of compulsory sickness insurance is to fulfil social and humanitarian purposes, and ought to be achieved by overcoming if possible the obstacles which may arise out of the sparseness of the population or the nature of the geographical conditions of certain countries;

And whereas, in order to facilitate the task of Governments and insurance institutions, it would be of the greatest utility to learn what is being done and what can be done to further this object;

The Conference,

Requests the International Labour Office to undertake an enquiry and to publish as complete a report as possible upon the most effective methods of overcoming the obstacles which hinder the organization of a system of compulsory sickness insurance in countries which are sparsely populated or where geographical conditions render communication difficult.

Contracts of Employment

The following resolution, proposed by Mr. de Michelis (Government Delegate, Italy) was adopted unanimously:—

The International Labour Conference requests the Governing Body to consider the possibility of placing the question of "The General Principles of Contracts of Employment" on the agenda of an early Session of the Conference.

Collective Disputes

The following further resolution, proposed by Mr. de Michelis, was also adopted unanimously:—

The International Labour Conference requests the Governing Body to consider the possibility of placing the question of "The Solution of Collective Labour Disputes" on the agenda of an early Session of the Conference.

Mr. Mertens (Workers, Belgium) said the Workers' Group, while not opposed to the two resolutions above, warned the Governing Body that any proposal to adopt compulsory arbitration would be resisted by the workers. Mr. de Michelis said he did not wish to push the Office or the Conference into any fixed direction in this matter, but he pointed out that there was an important movement in many countries towards some form of conciliation and arbitration, either free or compulsory.

Old Age, Invalidity, etc.

The following resolution, moved by Mr. Mertens, seconded by Mr. Mahaim (Government Delegate, Belgium), and supported by

Mr. de Michelis, was adopted unanimously:—

Whereas:

(1) It is essential to ensure the protection of workers against all industrial and social risks;

(2) The Seventh (1925) Session of the International Labour Conference adopted two Draft Conventions concerning workmen's compensation for industrial accidents and occupational diseases, and this Session of the Conference is asked to adopt Draft Conventions concerning sickness insurance;

(3) It is important to continue the international effort to develop compulsory invalidity, old age and widows' and orphans' insurance;

Recalling the resolution adopted at the Seventh Session of the Conference (1925) asking that the question of old age, invalidity and widows' and orphans' insurance should be placed on the agenda of an early Session of the Conference;

The Conference requests the Governing Body to place upon the agenda of an early Session of the International Labour Conference the question of invalidity, old age, widows' and orphans' insurance.

Whereas, moreover;

(1) Many countries have established, or propose to establish, compulsory insurance systems whereby workers or their families are entitled to a pension in case of invalidity, old age or premature decease;

(2) Whereas the acquisition of a right to such pensions is made subject by national laws to the completion of a qualifying period which is frequently of considerable length as well as to the payment of substantial contributions out of the wages of the insured persons during the whole of their working lives;

(3) Whereas the operation of more than one qualifying period frequently causes workers who have to look for employment in another country to lose the right to a pension which had already been partly acquired, so that they are either unable to obtain a pension at all, or such pension as they may obtain is inadequate, and they are thus deprived, contrary to all equity, of the benefit of the contributions which they have already paid and of the contributions paid to insurance institutions on their account by their employers;

(4) Whereas in the absence of internationally accepted rules bi-lateral treaties are rarely entered into between States, and when such treaties are concluded after prolonged negotiations they do not secure adequate protection of the workers, because, for example, each State is guided too strictly by its own laws and regulations and lays down conditions too stringent to enable the right to a pension to be equitably maintained;

(5) Whereas the consequence of the foregoing in the case of a great many workers, particularly miners and seamen, is that their long-continued effort to save is brought to nought and that they are left resourceless after a long life of toil;

The Conference,

Considering that the problem of the maintenance of rights to a pension in spite of its admitted complexity is of an essentially international character and calls urgently for treatment by the International Labour Organization,

Invites the International Labour Office to examine the situation created by national laws on old age, invalidity and widows' and orphans' insurance in regard to workers proceeding from one country to another, and to endeavour to find solutions enabling the right of such workers to a pension to be maintained; and

Requests the Governing Body of the International Labour Office to place on the agenda of an early Session of the International Labour Conference, either before or at the same time as the general question of old age, invalidity and widows' and orphans' insurance, the question of the maintenance of the right to pension of workers proceeding from one country to another.

Entry into Industry and Education

The following resolution was adopted on the motion of Mr. Ferguson (Government, Irish Free State), seconded by Sir Louis Kershaw (Government, India):—

Whereas the methods of entry into industry and other forms of employment and of the periods and conditions of training or apprenticeship are a matter to which a number of countries have found it necessary to give special consideration in recent years

It is proposed that the International Labour Office should make a study of these questions and should consider the publication of a report thereon resulting from an international survey of existing systems for regulating entry into industry and other employment as well as of systems of technical or vocational education related to employment in trade, industry or agriculture.

Native Labour Problems

The following resolution was adopted on the motion of Mr. Giri (Workers' Delegate, India), seconded by Mr. Culley (Workers,

Australia), and supported by Mr. Suzuki (Workers, Japan):—

The Conference notes the appointment by the Governing Body of a Committee of Experts to enquire into conditions of native labour and hopes that as the result of the work of the Committee it will be possible to place the questions of forced and indentured labour on the agenda of the Conference at an early date.

The Conference requests the Governing Body to draw the special attention of the Committee of Experts on Native Labour to the questions of criminal penalties for breach of labour contract and the protection of the worker against improper dismissal by the employer.

Representation of Native Workers

It was decided to refer to the Governing Body the following resolution submitted by Mr. Giri:—

The Conference calls the attention of Members of the Organization who are responsible for the administration of colonial or mandated territories to the desirability of including in their delegations representatives of the workers in such territories, in particular when questions affecting their conditions are on the agenda of the Conference.

The Conference also draws the attention of those nations which are Members of the International Labour Organization, and in which the white people are the ruling class, but in which the natives and the coloured people are either the majority of the population of that country or form a substantial portion of the population, to the desirability of the representatives of the native and coloured workers attending the International Labour Conference as a part of the delegation from those countries.

Hours of Work of Commercial Employees

The following resolution was adopted on motion of Mr .Schurch (Workers' Delegate, Switzerland):—

Whereas the Treaty of Peace has provided that the hours of work of all workers should be regulated;

Whereas the Washington Convention has regulated the hours of work for all industrial workers;

Whereas, moreover, in some countries the hours of work of workers other than industrial workers (commercial employees) are regulated by law;

The Conference requests the Governing Body of the International Labour Office to consider the possibility of placing on the Agenda of an early Session of the Conference the question of the international regulation of the hours of work of all workers other than industrial workers (commercial employees).

The Double Discussion Procedure

The following resolution, moved by Mr. Mahaim, Government delegate from Belgium, was adopted unanimously:—

The Conference, in view of the difficulties which have been experienced during the present session as regards the adoption of the questionnaires in accordance with paragraph 5, Article 6, of the Standing Orders, invites the Governing Body, while maintaining the principle, to examine further the application of the double discussion procedure, and to make proposals for its improvement to the next Session of the Conference.

Text of the Draft Convention concerning Sickness Insurance for Workers in Industry and Commerce and Domestic Servants

The full text of the two Draft Conventions and of the Recommendations which were adopted by the Conference follows:—

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Tenth Session on May 25, 1927, and

Having decided upon the adoption of certain proposals with regard to sickness insurance for workers in industry and commerce and domestic servants, which is included in the first item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts, this .... day of June of the year one thousand nine hundred and twenty-seven, the following draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles, and of the corresponding Parts of the other Treaties of Peace:

Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes to set up a system of compulsory sickness insurance which shall be based on provisions at least equivalent to those contained in this Convention.

44157—5½

Article 2

The compulsory sickness insurance system shall apply to manual and non-manual workers including apprentices employed by industrial undertakings and commercial undertakings, out-workers and domestic servants.

It shall, nevertheless, be open to any member to make such exceptions in its national laws or regulations as it deems necessary in respect of:—

(*a*) Temporary employment which lasts for less than a period to be determined by national laws or regulations, casual employment not for the purpose of the employers' trade or business, occasional employment and subsidiary employment;

(*b*) Workers whose wages or income exceed an amount to be determined by national laws or regulations;

(*c*) Workers who are not paid a money wage;

(*d*) Out-workers whose conditions of work are not of a like nature to those of ordinary wage-earners;

(*e*) Workers below or above age-limits to be determined by national laws or regulations;

(*f*) Members of the employers' family.

It shall further be open to exempt from the compulsory sickness insurance system persons who in case of sickness are entitled by virtue of any laws or regulations, or of a special scheme, to advantages at least equivalent on the whole to those provided for in this Convention.

This Convention shall not apply to seamen and sea fishermen for whose insurance against sickness provision may be made by a decision of a later Session of the Conference.

Article 3

An insured person who is rendered incapable of work by reason of the abnormal state of his bodily or mental health shall be entitled to a cash benefit for at least the first 26 weeks of incapacity from and including the first day for which benefit is payable.

The payment of this benefit may be made conditional on the insured person having first complied with a qualifying period and, on the expiry of the same, with a waiting period of not more than three days.

Cash benefit may be withheld in the following cases:—

(*a*) Where in respect of the same illness the insured person receives compensation from another source to which he is entitled by law, benefit shall only be wholly or partially withheld in so far as such compensation is equal to or less than the amount of the benefit provided by the present Article;

(b) As long as the insured person does not by the fact of his incapacity suffer loss of the normal product of his labour or is maintained at the expense of the insurance funds or from public funds; nevertheless, cash benefits shall only partially be withheld when the insured person, although thus personally maintained, has family responsibilities;

(*c*) As long as the insured person while ill refuses, without valid reason, to comply with the doctor's orders, or the instructions relating to the conduct of insured persons while ill, or voluntarily and without authorization removes himself from the supervision of the insurance institutions.

Cash benefit may be reduced or refused in the case of sickness caused by the insured person's wilful misconduct.

Article 4

The insured person shall be entitled free of charge as from the commencement of his illness and at least until the period prescribed for the grant of sickness benefit expires to medical treatment by a fully qualified medical man and to the supply of proper and sufficient medicines and appliances.

Nevertheless, the insured person may be required to pay such part of the cost of medical benefit as may be prescribed by national laws or regulations.

Medical benefit may be withheld as long as the insured person refuses, without valid reason, to comply with the doctor's orders or the instructions relating to the conduct of insured persons while ill, or neglects to make use of the facilities placed at his disposal by the insurance institution.

Article 5

National law or regulations may authorize or prescribe the grant of medical benefit to members of an insured person's family living in his household and dependent upon him, and shall determine the conditions under which such benefit shall be administered.

Article 6

Sickness insurance shall be administered by self-governing institutions, which shall be under the administrative and financial supervision of the competent public authority and shall not be carried on with a view to profit. Institutions founded by private initiative must be specially approved by the competent public authority.

The insured persons shall participate in the management of the self-governing insurance institutions on such conditions as may be prescribed by national laws or regulations.

The administration of sickness insurance may, nevertheless, be undertaken directly by the State where and as long as its administration is rendered difficult or impossible or inappropriate by reason of national conditions, and particularly by the insufficient development of the employers' and workers' organizations.

Article 7

The insured persons and their employers shall share in providing the financial resources of the sickness insurance system.

It is open to national law or regulations to decide as to a financial contribution by the competent public authority.

Article 8

This Convention does not in any respect affect the obligations arising out of the Convention concerning the employment of women before and after childbirth adopted by the International Labour Conference at its First Session.

Article 9

A right of appeal shall be granted to the insured person in case of dispute concerning his right to benefit.

Article 10

It shall be open to States which comprise large and very thinly populated areas not to apply the Convention in districts where, by reason of the small density and wide dispersion of the population, and the inadequacy of the means of communication, the organization of sickness insurance, in accordance with this Convention, is impossible.

The States which intend to avail themselves of the exception provided by this Article shall give notice of their intention when communicating their formal ratification to the Secretary-General of the League of Nations. They shall inform the Int. Labour office as to what districts they apply the exception and indicate their reasons therefor.

In Europe it shall be open only to Finland to avail itself of the exception contained in this Article.

Article 11

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles, and in the corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary-General of the League of Nations for registration.

Article 12

This Convention shall come into force 90 days after the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member 90 days after the date on which its ratification has been registered with the Secretariat.

Article 13

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other members of the Organization.

Article 14

Subject to the provisions of Article 12, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10 into operation not later than January 1, 1929, and to take such action as may be necessary to make these provisions effective.

Article 15

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 16

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 17

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall

consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 18

The French and English texts of this Convention shall both be authentic.

Text of the Draft Convention concerning Sickness Insurance for Agricultural Workers

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Tenth Session on May 25, 1927, and

Having decided upon the adoption of certain proposals with regard to sickness insurance for agricultural workers, which is included in the first item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts, this...day of June of the year one thousand nine hundred and twenty-seven, the following draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles, and of the corresponding parts of the other Treaties of Peace:

Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes to set up a system of compulsory sickness insurance for agricultural workers, which shall be based on provisions at least equivalent to those contained in this Convention.

Article 2

The compulsory sickness insurance system shall apply to manual and non-manual workers, including apprentices employed by agricultural undertakings.

It shall, nevertheless, be open to any Member to make such exceptions in its national laws or regulations as it deems necessary in respect of:—

(*a*) Temporary employment which lasts for less than a period to be determined by national laws or regulations, casual employment not for the purpose of the employers' trade or business, occasional employment and subsidiary employment;

(*b*) Workers whose wages or income exceed an amount to be determined by national laws or regulations;

(*c*) Workers who are not paid a money wage;

(*d*) Out-workers whose conditions of work are not of a like nature to those of ordinary wage-earners;

(*e*) Workers below or above age-limits to be determined by national laws or regulations;

(*f*) Members of the employer's family.

It shall further be open to exempt from the compulsory sickness insurance system persons who in case of sickness are entitled by virtue of any laws or regulations, or of a special scheme, to advantages at least equivalent on the whole to those provided for in this Convention.

Article 3

An insured person who is rendered incapable of work by reason of the abnormal state of his bodily or mental health shall be entitled to a cash benefit for at least the first twenty-six weeks of incapacity from and including the first day for which benefit is payable.

The payment of this benefit may be made conditional on the insured person having first complied with a qualifying period and, on the expiry of the same, with a waiting period of not more than three days.

Cash benefit may be withheld in the following cases:

(*a*) Where in respect of the same illness the insured person receives compensation from another source to which he is entitled by law, benefit shall only be wholly or partially withheld in so far as such compensation is equal to or less than the amount of the benefit provided by the present Article;

(*b*) As long as the insured person does not by the fact of his incapacity suffer any loss of the normal product of his labour or is maintained at the expense of the insurance funds or from public funds; nevertheless, cash benefits shall only partially be withheld when the insured person, although thus personally maintained, has family responsibilities.

(*c*) As long as the insured person while ill refuses, without valid reason, to comply with the doctor's orders, or the instructions relating to the conduct of insured persons while ill, or voluntarily and without authorization removes himself from the supervision of the insurance institutions.

Cash benefit may be reduced or refused in the case of sickness caused by the insured person's wilful misconduct.

Article 4

The insured person shall be entitled free of charge as from the commencement of his illness and at least until the period prescribed for the grant of sickness benefit expires, to medical treatment by a fully qualified man and to the supply of proper and sufficient medicines and appliances.

Nevertheless, the insured person may be required to pay such part of the cost of medical benefit as may be prescribed by national laws or regulations.

Medical benefit may be withheld as long as the insured person refuses, without valid reason, to comply with the doctor's orders or the instructions relating to the conduct of insured persons while ill, or neglects to make use of the facilities placed at his disposal by the insurance institution.

Article 5

National law or regulations may authorize or prescribe the grant of medical benefit to members of an insured person's family living in his household and dependent upon him, and shall determine the conditions under which such benefit shall be administered.

Article 6

Sickness insurance shall be administered by self-governing institutions, which shall be under the administrative and financial supervision of the competent public authority and shall not be carried on with a view to profit. Institutions founded by private initiative must be specially approved by the competent public authority.

The insured persons shall participate in the management of the self-governing insurance institutions on such conditions as may be prescribed by national laws or regulations.

The administration of sickness insurance may, nevertheless, be undertaken directly by the State where and as long as its administration is rendered difficult or impossible or inappropriate by reason of national conditions, and particularly by the insufficient development of the employers' and workers' organizations.

Article 7

The insured persons and their employers shall share in providing the financial resources of the sickness insurance system.

It is open to national law or regulations to decide as to a financial contribution by the competent public authority.

Article 8

A right of appeal shall be granted to the insured person in case of dispute concerning his right to benefit.

Article 9

It shall be open to States which comprise large and very thinly populated areas not to apply the Convention in districts where, by reason of the small density and wide dispersion of the population, and the inadequacy of the means of communication, the organization of sickness insurance, in accordance with this Convention, is impossible.

The States which intend to avail themselves of the exception provided by this Article shall give notice of their intention when communicating their formal ratification to the Secretary-General of the League of Nations. They shall inform the International Labour Office as to what districts they apply the exception and indicate their reasons therefor.

In Europe it shall be open only to Finland to avail itself of the exception contained in this Article.

Article 10

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles, and in the corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary-General of the League of Nations for registration.

Article 11

This Convention shall come into force ninety days after the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member ninety days after the date on which its ratification has been registered with the Secretariat.

Article 12

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 13

Subject to the provisions of Article 11, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6, 7, 8, and 9 into operation not later than 1 January, 1929, and to take such action as may be necessary to make these provisions effective.

Article 14

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 15

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 16

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 17

The French and English texts of this Convention shall both be authentic.

Text of the Recommendation concerning the General Principles of Sickness Insurance

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Tenth Session on 25 May, 1927, and

Having decided upon the adoption of certain proposals with regard to the principles of sickness insurance, the first item on the Agenda of the Session, and

Having determined that these proposals should take the form of a Recommendation.

adopts, this ... day of June of the year one thousand nine hundred and twenty-seven, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Whereas the maintenance of a healthy and vigorous labour supply is of capital importance not only for the workers themselves, but also for communities which desire to develop their productive capacity; and

Whereas this development is only attainable by constantly and systematically applying provident measures to obviate or make good any loss of the workers' productive efficiency; and

Whereas the best provident measure for these purposes is to establish a system of social insurance which confers clearly defined rights on the persons to whom it applies;

Therefore the General Conference of the International Labour Organization,

Having adopted draft Conventions concerning, of the one part, sickness insurance for workers in industry and commerce, and domestic servants, and, of the other part, sickness insurance for agricultural workers, drafts which lay down minimum conditions which must be complied with from the beginning by every system of sickness insurance, and

Considering that, in order to put the experience already gained at the disposal of the members with a view to assisting them in the institution or completion of their sickness insurance services, it is desirable to indicate a number of the general principles which practice shows to be the best calculated to promote a just, effective and appropriate organization of sickness insurance.

Recommends that each member should take the following principles and rules into consideration:

I. SCOPE OF APPLICATION

1. Sickness insurance should include within its scope, without discrimination as to age or sex, every person who performs work by way of his occupation and under a contract of service or apprenticeship.

2. If, however, it is considered desirable to fix age-limits by reason of the fact that workers above or below such limits are al-

ready protected by law or otherwise, such limits should not apply to young persons who cannot normally be considered as dependent upon their family or to workers who have not reached the old-age pension age; and

If exceptions are made in respect of workers whose earnings or income exceed a specified amount, such exceptions should only apply to workers whose earnings or income are such that they may reasonably be expected to make their own provision for sickness.

II. BENEFITS

A. Cash Benefits.

3. In order to secure that an insured person who is rendered incapable of work by sickness may recover his health as early as possible, the cash benefit representing compensation for lost wages should be adequate.

For this purpose the statutory scale of benefit should ordinarily be fixed in relation to the normal wage which is taken into account for the purposes of compulsory insurance, and should be a substantial proportion of such wage, regards being had to family responsibilities; but in countries where the workers have adequate facilities, of which they are accustomed to take advantage to procure for themselves additional benefit by other means, a uniform scale of benefit may be appropriate.

4. The statutory benefit should be paid for at least the first twenty-six weeks of incapacity as from and including the first day for which benefit is payable; nevertheless, the period for which benefit is payable should be increased to one year in cases of serious and chronic illness and for insured persons who will not receive any invalidity benefit on the expiry of their right to sickness benefit.

5. An insurance institution which can show that it is in a sound financial position should be authorized:

(*a*) To increase the statutory scale of benefit up to specified amounts either for all insured persons or for certain groups of the same, in particular insured persons with family responsibilities;

(*b*) To prolong the statutory period during which benefit is payable.

6. In countries where burial expenses are not, customarily or by law, covered by some other insurance, sickness insurance institutions should, on the death of an insured person, pay a benefit in respect of the cost of decent burial; they should also be empowered to pay such a benefit in respect of the burial expenses of the insured person's dependants.

B. Benefits in kind.

7. Treatment by a fully qualified doctor and the supply of proper and sufficient medicines and appliances should be granted to an insured person from the beginning of his illness and for so long as the state of his health requires it; the insured person should be entitled to these benefits free of charge from the beginning of his illness and at least until the expiry of the period prescribed for the grant of sickness benefit.

8. In addition to treatment by a fully qualified doctor and the supply of proper and sufficient medicines and appliances, there should be available for the insured person, as and when local and financial conditions admit, facilities for specialist services, as well as dental treatment, and for treatment in hospital, where his family circumstances necessitate it or his illness requires a mode of treatment which can only be given in hospital.

9. While an insured person is maintained in hospital, the insurance institution should pay to his dependants the whole or a part of the sickness benefit which would have been payable to him had he not been so maintained.

10. With a view to ensuring good conditions for the maintenance in health of the insured person and his family, members of the insured person's family living in his home and dependent upon him should be furnished with medical benefit, as and when it may be possible and practicable to do so.

11. Insurance institutions should be empowered to avail themselves, on equitable conditions, of the services of such doctors as they need.

In urban centres, and within specified geographical limits, an insured person should be entitled to choose a doctor from among those at the disposal of the insurance institution, unless this would involve considerable extra expense to the institution.

C. Sickness Prevention.

12. As most diseases can be prevented, an alert policy of prevention is calculated to avert loss of productive efficiency, to render available for other purposes the financial resources which are absorbed by avoidable illness, and to promote the material, intellectual and moral well-being of the community.

Sickness insurance should assist in inculcating the practice of the rules of hygiene among the workers. It should give preventive treatment and grant the same to as large a number of individuals as possible as soon as the premonitory symptoms of disease appear.

It should be capable of contributing towards the prevention of the spread of disease and the improvement of the national health, in pursuance of a general policy co-ordinating all the various activities towards these ends.

III. Organization of Insurance

13. Insurance institutions should be administered, under the supervision of the competent public authority in accordance with the principles of self-government, and shall not be carried on for profit. The insured persons being those who are the most directly interested in the working of the insurance scheme should, through elected representatives, have an important part in the management of the insurance system.

14. A good organization of medical benefit and, in particular, the efficient provision and utilization of medical equipment embodying the results of scientific progress can be most easily secured—except in certain special circumstances—by concentrating action on a territorial basis.

IV. Financial Resources

15. The financial resources for the insurance scheme should be provided by contributions from the insured persons and contributions from employers. The provision thus jointly made can be supplemented to advantage by contributions from public funds, especially for the purpose of improving the health of the people.

With a view to securing the stability of the insurance system, reserve funds, appropriate to the peculiar circumstances of the system, should be constituted.

V. Settlement of Disputes

16. With a view to their being settled rapidly and inexpensively, disputes as to benefits between insured persons and insurance institutions should be referred to special tribunals, the members of which include judges or assessors who are specially cognisant of the purposes of insurance and the needs of insured persons.

VI. Exception for Sparsely Populated Territories

17. States which, by reason of the small density of their population or of the inadequacy of the means of communication, cannot organize sickness insurance in certain parts of their territory should:—

(*a*) Establish in such parts of their territory a sanitary service adequate to the local conditions;

(*b*) Examine periodically whether the conditions required for the introduction of compulsory sickness insurance in the parts of their territory previously excepted from the compulsory scheme are fulfilled.

VII. Seamen and Sea Fishermen

This Recommendation shall not apply to seamen and sea fishermen.

Annual Report of the Director

The annual report of the director of the International Labour Office, as presented to the 10th session of the conference has been published separately in two substantial volumes. The report sums up the present standing of the Organization in the world in the following paragraphs:—

An Organization still comprising nearly all the sovereign States of the world as active members;

Relations, perhaps still limited and uncertain, but already begun for information and investigation purposes with the important industrial communities which are not yet members of the League of Nations;

The machinery set up by the Treaty of Peace, the International Labour Conference and the Governing body, constantly running more smoothly and adapting itself more and more to deal with the difficulties of international life;

The internal organization of the International Labour Office now well beyond the experimental stage, likely no doubt to be improved in the natural development of things, but already capable of meeting its varied and complex requirements;

A body of international officials becoming more homogeneous, devoted to its work, conscious of the novelty and so to speak the strangeness of its international position, but better trained to discharge the high duties imposed upon it;

Lastly, greater facility and confidence in the co-operation with the institutions of the League of Nations as a whole.

Part I of the report gives a review of the general activities of the International Labour Organization. The first section deals with the working of the Organization, its internal development, its external relations; in short, it reviews the working of the machinery for carrying out the purposes Part XIII of the Treaty. The second section analyses the results produced. Every year an endeavour is made to make this analysis at once more instructivve and more comprehensive. This analysis of the results helps the Office to guide its future work on the best lines. It constitutes a sort of annual review of the labour movement throughout the world. The appreciation with which it

has been received in past years is shown by the fact that translations, summaries, or even a more popular edition of that portion of the report have been asked for in a number of countries.

Part II consists of the summary provided for in the Peace Treaty of the annual reports submitted by the member states in pursuance of Article 408, showing the measures taken by each to give effect to conventions to which it is a party. Last year reference was made to the necessity of having these reports considered and compared. This course was approved by the Eighth Session of the Conference, which decided to set up a special committee for the purpose of examining the report. This committee's conclusion, after having been submitted to the Governing Body, are given in an Appendix to Part II of the report.

Changes in Membership.—The year 1926 saw important changes take place in the composition of the League of Nations. The September assembly admitted Germany. On the other hand, Brazil and Spain withdrew. The governments of these two latter countries have given the two years' notice prescribed in Article I of the Covenant for States wishing to withdraw from the League. On October 1, however, the Spanish Government informed the Office that Spain, although withdrawing from the League of Nations, nevertheless wished to remain a member of the International Labour Organization, and that by so doing it could "pursue with the same enthusiasm as before the collaboration which it has given to the work of the International Labour Office." The list of the members of the International Labour Organization now includes almost all the States of the world, except the two important industrial countries, Russia and the United States, and Mexico, Turkey and Egypt. At the end of 1926 the Deputy Director, Mr. Butler, was sent on a mission to the United States. He investigated more particularly the central problem of industrial relations, and his visit was the means of enabling the Office to renew useful relations and to get in touch once more with public opinion generally.

The Office's relations with Russia continued to develop during 1926, and the exchange of publications started a number of years ago between the Office and the different government institutions, workers' and co-operative organizations and scientific institutions became regular. At the beginning of each year the request for renewing the exchange of publications comes not only from the Office but often from Russian organizations, which sometimes extend the range of questions on which they desire to havve the Office's publications.

Departments of Work.—The report contains sections dealing with the legal questions raised by the working of the conference; the activities of the Governing Body, and of the various committees, the latter including the Joint Maritime Commission; the Permanent Migration Committee; the Correspondence Committee on Industrial Hygiene and Safety; the Committee of Experts on Social Insurance; the Mixed Advisory Agricultural Committee; the Committee of Experts on Native Labour; the International Conference of Labour Statisticians; and the Assessors for Labour Causes. The Organization of the International Labour Office is described, including the methods of appointing of staff; the new building at Geneva, etc. The draft budget for 1928 amounted to about eight million francs.

Publications.—An important department of the activities of the Organization is described in a separate chapter dealing with the publications and other means of international information on labour matters. One of the most interesting steps taken by the Office during the past year in the matter of documentary information was the systematic collection of the most important collective agreements. This is a necessary complement to the collection of labour laws and regulations. Among the various methods of compiling information the Office devotes special attention to the preparation of statistical reports. It makes a special endeavour to promote the international unification of labour statistics, having been forced ever since its foundation to realize the importance of such unification, and a systematic plan is now followed to secure this result. Information on labour subjects is distributed on request to all parts of the world. The following periodical publications are among those issued regularly:—

Industrial and Labour Information (weekly).
International Labour Review (monthly).
Monthly Record of Migration.
Industrial Safety Survey (every 2 months).
Bibliography of Industrial Hygiene (quarterly).
Legislative Series (texts of labour laws).
Studies and Reports (on various subjects).

Among the special publications are mentioned the International Labour Directory; the Encyclopedia of Industrial Hygiene; the International Survey of Legal Decisions on Labour Law; publications for the International Economic Conference, etc.

Achievements during Seven Years.—The second section of the report contains an examination of the results so far achieved by the

work of the Organization. After a survey of the work so far attempted the following incontrovertible facts are enumerated as showing the actual accomplishments during the seven years of its existence:

The number of ratified conventions has risen during the past year from 194 to 229.

The Hours Convention is beginning to emerge from the silence and obscurity in which it was wrapped, and is attracting the attention of governments and parliaments in the great industrial countries, one of which has indeed ratified it unconditionally.

Thousands of workers in the baking industry are already, thanks to the ratifications which have taken place up to the present, enjoying the nightly rest which the International Labour Conference endeavoured to ensure for them.

The evil of unemployment is alleviated by the measures proposed at Washington.

Japanese seamen have written to the office to express their satisfaction at having a proper system of joint employment exchanges set up at last under a ratified convention.

Many emigrants, although they are perhaps unaware of it are benefiting by the work of the Office in supplying information, and are obtaining the same safeguards and benefits as national workers.

35,000 Russian or Armenian refugees, all of whom were unemployed, and many of whom were without means, have been found positions or have been established as independent peasants by the Refugees Section.

Thousands of house painters have been protected from the terrible consequences of lead poisoning, and workers in the match industry are saved every year from necrosis.

Working women in numbers of countries are entitled to a rest period and to maternity benefit before and after the birth of their children.

Common action is being taken by men of goodwill to provide healthy and happy conditions for seamen on shore.

Agricultural workers in remote rural districts are enabled by one of the recommendations of the Conference to live under proper conditions instead of having to sleep on the straw in stables.

In the Far East India and Japan are gradually building up a structure of legislation founded on the firm basis of the international conventions.

Far away in Africa native labourers are protected from forced labour, provided with proper sanitary conditions and fairly remunerated for their labour because the representative of the Office on the Mandates Commission and the Slavery Committee has, in the discussion of each report, untiringly drawn attention to the principles of humanity and civilization.

As the year draws to a close the responsible chiefs of the International Labour Office are thus able to await the judgment of the Conference on their work without undue anxiety. In the words of the Labour Charter they have been able to "confer lasting benefits upon the wage-earners of the world."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Federation of League of Nations Societies

The Eleventh Plenary Congress of the International Federation of League of Nations Societies, which was held in Berlin during May and was attended by upwards of 200 delegates from 24 countries, adopted three resolutions relating to the International Labour Organization and its work. The first of these resolutions may be summarized as follows:

It recommends the national societies to establish advisory committees, representing employers, workers, consumers and other important industrial and economic interests, for the purpose of assisting the societies in dealing with questions connected with the organization;

It urges the societies to study subjects ripe for international treatment, and to stimulate public opinion in favour of the ratification of Conventions;

It pledges the societies to make representations to their Governments in favour of complete delegations to the Conference and the submission of Conventions to Parliaments, and to concentrate their efforts on securing ratification and effective application of Conventions which they are prepared to support.

The second resolution expresses satisfaction that the Hours Convention has been ratified by Belgium, and that conditional ratification has been voted by the French Parliament, and invites societies whose Governments have not yet ratified the Convention to make unremitting efforts to that end.

The third resolution requests the societies to use their influence with their national education authorities with a view to the inclusion, in the regular curriculum of schools, of instruction in the principles and work of the International Labour Organization.

The texts of these resolutions will be communicated by a representative deputation to

the officers of the International Labour Conference in the course of the present week, and will be published in due course in these pages.

International Organization of Industrial Employers

The Third Congress of the International Organization of Industrial Employers was held at Zurich, Switzerland, on May 19 and 20. Mr. Schulthess, Chief of the Swiss Department of National Economy, in a message of greeting from the Swiss Government, spoke as follows:—

The holding of the International Economic Conference is a symptom of the present situation. Everywhere there is a strong feeling that things cannot continue as they are. Some speak of solving the social problem, but they forget that it continually re-appears. Antagonisms are more pronounced than ever. The modern industrial State presents us with tremendous tasks. On both sides the organizations are mustering their strength. In the face of this situation, the tasks which devolve on the State have increased almost to infinity. The State has to enter the arena. It needs your advice and your support. You are relatively few in number, but your influence is great. I should like to see the employers taking more and more interest in public affairs, and devoting to them a portion of the time which they now give to private business. Perhaps you would then realize more clearly that the exercise of authority is an arduous task and often an ungrateful one, and that only the feeling of duty makes us persevere in the service of the country.

Mr. Charles Tzaut, President of the General Council, recalled the origin of the Organization, which was suggested as early as 1911 but did not come into being until after the war. He stated the aims of the Organization, the principles by which it is actuated and the part that had been played by the employers' delegates in the Governing Body and the Conference of the International Labour Organization. With regard to the latter, he stated that the Conference had adopted twenty-four Conventions in all, five of which were confined to maritime matters. Of the remaining nineteen, the employers' group in the International Labour Conference had supported thirteen unanimously or by a big majority, sometimes without enthusiasm but for the sake of keeping the peace. In three cases the employers had abstained from voting, and in only three cases had they voted against Draft Conventions. In view of these facts he claimed that the employers had co-operated loyally in the great work of the International Labour Organization.

France and the Hours Convention

An Act to authorize ratification of the Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week passed the French Parliament on May 20. The legislation in question provided that the obligations imposed by ratification should not come into force in France until the Convention has been ratified by Germany and Great Britain. The formal ratification of this Convention has since been communicated to the League of Nations, subject to the condition above mentioned.

WORLD ECONOMIC CONFERENCE AT GENEVA

THE World Economic Congress, held under the auspices of the League of Nations, opened at Geneva on May 4, and continued for three weeks. In a resolution of September, 1925, the Assembly of the League declared itself to be "firmly resolved to seek all possible means of establishing peace throughout the world," and affirmed its conviction that "economic peace will largely contribute to security among the nations." It further emphasized the necessity of investigating the economic difficulties which stand in the way of the revival of general prosperity and of ascertaining the best means of overcoming these difficulties and of preventing disputes. The conference met after preparations extending over a year, having at its disposal documents prepared through the collaboration of experts in the various lines of inquiry. It was attended by 194 members, who were in turn advised by 157 experts, drawn from fifty countries throughout the world, including the United States, Russia, and Turkey, in addition to the state members of the League of Nations. The decisions of the conference were reached by agreement of the representatives. The president of the Congress was M. Theunis, formerly Belgian prime minister. Canada was represented by Messrs. Albert Matthews, Joseph Daoust, Dr. Adam Shortt, W. A. Wilson and Dr. W. A. Riddell.

The President in his concluding address, complimented the delegates on the generous spirit of compromise which had made the decisions unanimous.

"Producers, employers and workers, farmers, traders, financiers, economists and consumers, you have, without neglecting the interests which you represent and which you have to defend, constantly borne in mind that we are all members of the same community, working, toiling, suffering together and directing our efforts to a common end."

The Conference worked through three commissions—on commerce, industry and agriculture—and the general resolutions are divided under these three heads. The president pointed out that the basis of the conference was the assumption that international trade is itself to be desired; that the exchange of products and services between persons either of the same country or of different countries is normally to the advantage of both parties; that the greater the range of exchange of different products between those who by their resources and capacities are best fitted to produce them, the greater is the general economic advantage; and that international exchange of products best and most economically produced in different countries should therefore be regarded as the normal rule.

The official report of the conference opens with a general review of the world economic position, based on reports from twenty-four nations. A resolution was passed unanimously, stating that the maintenance of world peace depends largely upon the principles on which the economic policies of nations are formed and executed and that the governments and peoples of all countries should constantly take counsel together as to this aspect of the economic problem; and recommending the establishment of a recognized body of principles designed to eliminate the economic difficulties which cause friction and misunderstanding. President Theunis remarked in this connection that "economic conflicts and divergence of economic interest are perhaps the most serious and the most permanent of all the dangers which are likely to threaten the peace of the world. No machinery for the settlement of international disputes can be relied upon to maintain peace if the economic policies of the world so develop as to create not only deep divergencies of economic interest between different masses of the world's population but a sense of intolerable injury and injustice. No task is more urgent or more vital than that of securing agreement on certain principles of policy which are necessary in the interests of future peace."

Among other general recommendations the conference proposed a reduction in the heavy burden of armaments entailing heavy taxation which reacted on the whole economic life of each nation and lowered the standard of living.

Commerce

The fundamental idea of the conference in regard to commerce was the necessity for "restoring greater freedom to a world hitherto hampered by many obstacles due to the war and its consequences, and to erroneous economic ideas." Fuller liberty of trading was recommended. This expression, the president pointed out, is not to be confounded with Free Trade, but "embraces all measures calculated to liberate international commerce from artificial restrictions and obstructions." The conference suggested that the diplomatic conference to be held at Geneva next November, might be made the means of removing of import and export prohibitions and restrictions. The desirability of simplifying and stabilizing customs tariffs as far as possible was recognized. With a view to limiting tariffs the conference recommended, firstly, individual action by the various states with regard to their own tariffs; secondly, bi-lateral action through the conclusion of suitable commercial treaties; thirdly, collective action, by means of an inquiry undertaken by the Economic Organization of the League of Nations, with a view to encouraging the extension of international trade on an equitable basis by removing or lowering the barriers to international exchange set up by excessive customs tariffs.

It is noted that customs tariffs are now regarded as a subject for concerted action among the different nations, this progress from the purely national view marking "a considerable step in the evolution of ideas in customs tariffs." The conference adopted several resolutions tending to hasten the reduction of existing barriers to international trade.

Industry

The conference took as its central problem the reduction of the cost of production without injury to the consumer or the worker. With this object it considered: (1) "rationalization" in its various aspects, and, in this connection, (2) international industrial agreements, and (3) the collection and exchange of information.

"Rationalization" is defined as signifying the methods of technique and of organization designed to secure the minimum waste of either effort or material. It includes the scientific organization of labour, standardization both of materials and products, simplification of processes, and improvements in the system of transport and marketing. The conference declared that rationalization must be applied with care so as not to injure the legitimate interest of the workers. It therefore recommended that governments, public

institutions, trade organizations and public opinion, as the case may be, should encourage producers to promote the investigation of the best methods and results of rationalization and scientific management and standardization, not neglecting the smaller undertakings and giving special attention to measures calculated to promote social welfare.

In regard to international agreements the conference laid down no fixed principle, but recognized the growth of agreements as a development which may be either good or bad according to the spirit in which they are constituted and operated, and the measure in which their directors are actuated by a sense of the general interest. "Agreements" the president said, "cannot by themselves be regarded as the only remedy for the present causes of economic trouble; but, within limits, they may serve to improve the organization and reduce the cost of production." By checking uneconomic competition and diminishing industrial fluctuations they may make employment more stable while benefiting the consumer. Nevertheless, agreements may involve danger if they encourage monopolistic tendencies and unsound business methods.

The conference therefore concluded that agreements ought not to lead to an artificial rise of prices, and that they should not restrict the supply to any particular country of raw materials or basic products, or, without just cause, create unequal conditions between the finishing industries of consuming and producing countries or other countries similarly placed. Nor should they stereotype the present position of production or the distribution of industries.

It was recommended that as publicity is one of the most effective means to prevent growth of abuses, the League of Nations should follow closely the operations and effects of international agreements and publish information thereon.

The conference laid special emphasis on the importance of the systematic collection of accurate information both from the point of view of the leaders of industry and of the public. Accurate statistics should be obtained both for the basic world industries and also for the chief industries of each country, so as to render possible the compilation of quantitative indices of industrial production.

The Economic Organization of the League of Nations was asked to endeavour to promote international agreements with regard to terms, methods and scope of industrial statistics employed, and to collate the information provided as to raw materials, production, etc., the International Labour Office dealing with wages, hours, employment, etc.

Agriculture

The most important outcome of the discussions on agriculture was stated by the president to be the realization of the essential inter-dependence of agriculture, industry and commerce. The conference considered that the first measures for the improvement of agriculture must be taken by agriculturists themselves—by the general adoption of better technical methods, more scientific organization, an extension of the international campaign against diseases of plants and animals, and by co-operation and the organization of credit institutions. With regard to the co-operative movement, the conference emphasized the importance of direct relations between producers' and consumers' associations.

National credit institutions were recommended, with or without the assistance of the public authorities in each country. The conference laid stress on the desirability of removing hindrances to the free flow of agricultural products, in so far as their removal does not endanger the vital interests of the various countries or their workers. Where a minimum of protection is maintained, care should be taken to maintain an equitable balance between industry and agriculture, and not to stifle one to the advantage of the other.

The conference requested the League of Nations to ensure that, in the organizations already existing or to be formed for the study of economic questions, agricultural interests shall be represented in proportion to their economic and social importance.

In his closing address summarizing the work accomplished by the conference, President Theunis said: "The eight years of post-war experience have demonstrated the outstanding fact that, except in the actual fields of conflict, the dislocation caused by the war was immensely more serious than the actual destruction. The main trouble now is neither any material shortage in the resources of nature, nor any inadequacy in man's power to exploit them. It is all, in one form or another, a maladjustment—not an insufficient productive capacity, but a series of impediments to the full utilization of that capacity. The main obstacles to economic revival have been the hindrances opposed to the free flow of labour, capital and goods.

"The removal of these obstacles, with the twofold object of stimulating production and restoring free channels for trade, requires concerted international action. The attainment of the former object lies largely in the hands

of producers in promoting by co-operation more scientific methods, such as simplification and standardization, which eliminate waste. A necessary preliminary to this process is the collection and periodical publication of information bearing on production and its factors which shall be fuller, more regular, more uniform and better co-ordinated. The second object lies rather within the scope of governmental efforts inspired and permitted by an enlightened opinion among the employers, workers and consumers."

INDUSTRIAL SURVEY IN NEW YORK STATE

THE general conditions of labour in the manufacturing and mercantile business in the State of New York were the subject of a recent inquiry by an "Industrial Survey Commission" appointed last year by the State Legislature. The Commission was composed of three senators and five members of the Assembly. The inquiry was suggested by the numerous labour bills coming up for consideration at each session, requiring that the legislators should be conversant with existing conditions. Moreover the recent controversy regarding equality for men and women in industry on the occasion of the conference held early in 1926 by the Women's Bureau of the United States Department of Labour* appeared to call for a thorough investigation of all the special laws regulating the employment of women.

Special Legislation Affecting Women

In their report the Commissioners give special prominence to the proposal to limit by law the working hours of women in factories and shops to 48 hours in the week. They favour such special legislation for women providing a 48-hour week for those employed for six full days, but allowing an extension to 49½ hours in factories and shops for the purpose of giving the employees a full half holiday on one day each week, in addition to their regular day of rest. The arguments for or against such legislation are considered, and the commissioners, while conceding that the balance of reasons is in favour of restricted hours, appear to regard such limitations as a matter of present expediency, rather than as being based on any essential need for the protection of women by means of special laws. "To your commission it seems that a more important question to women is the obtaining for them of wages more nearly approximating the wages of men engaged in work requiring equal intelligence and application. In comparison with the wages given to men, the wages paid women are unjustly inadequate. As one woman stated, a woman well paid, well fed, is happier at fifty-two hours than one underpaid at forty-eight hours."

Many witnesses appeared before the commission both for and against the law. Union male labour was found to be for the law. Union female labour, especially those working only forty-eight hours or less, and many women interested in welfare work, were also for the law. On the other hand many workers seemingly healthy and some women's political organizations, were opposed to the proposed law.

Industrial Council Commended

A large part of the report deals with questions arising out of workmen's compensation. The commisisoners received numerous suggestions for amendments to the law on this subject. Many of these suggestions were connected with difficulties arising out of administration, which did not appear to the commissioners to call for any new provision in the law. They suggest that "purely administrative matters should be treated administratively," and that if the parties concerned have suggestions to make for remedying conditions they should bring them directly to the administrative authorities.

Special machinery exists in New York State for encouraging the joint discussion of labour difficulties. The establishment of the "Industrial Council" of the State was noted in the LABOUR GAZETTE, July, 1924, page 557. The council is composed of representatives of employers and employees, with the State Industrial Commissioner and the chairman of the Industrial Board as chairman and vice-chairman respectively. It offers employers and labour the means of continuous and direct contact with the Labour Department. The council may make to the commission any suggestions that it believes proper after full inquiry and investigation. The commissioners report after four years' experience, that the Industrial Council has rendered excellent service in bringing together the conflicting viewpoints of employer and employee. They suggest that "it possibly could render a great additional

* LABOUR GAZETTE, April, 1926, page 308; June, page 531; also February, 1926, page 130.

service by acting as a clearing house for the complaints that frequently arise and that may not always be well founded."

Effects of "Closed Unions" in Building Trades

The report contains the following paragraphs on conditions in the building trades in New York City:—

"Very early in the work of the commission it became apparent, through the testimony of witnesses representing contractors in the city of New York, engaged in the building trades, that certain unions in this highly unionized business could not or would not furnish the number of men necessary to carry on their particular branches of the business, perhaps due to the fact that through in effect a closing of the membership lists the supply of available union men was restricted, and that moreover, these unions would not permit new men to be admitted to the union to make up this deficiency, nor permit in some cases men holding cards in the union from some other locality to work here.

"It is plain that a closed union is an evil working first against the contractor and the public and eventually against the working men because the tendency to the formation of such an aristocracy of labour will be the formation of rival unions to cover the whole of the trade affected and the creation of a feeling of deep discontent in the hearts of those workers not members of the closed union who must walk the streets in search of work while jobs are crying for workers and while the closed union members who thus exclude their brother workers, are employed at unusual wages."

EMPLOYMENT SERVICE COUNCIL OF CANADA

THE Employment Service Council of Canada, a body advisory to the Minister of Labour in connection with the operations under the Employment Offices Co-ordination Act, met in Ottawa for its eighth annual meting on June 23 and 24. The Council is representative of the provincial government employment services, the Federal Departments of Labour and Soldiers' Civil Re-establishment, various organizations of workers and employers, the railways, and returned soldiers. After an official welcome by the Hon. Peter Heenan, Minister of Labour, the delegates proceeded to a discussion of several topics which affect the proper functioning of the free public employment offices throughout Canada. Among these subjects were the following: the relation of immigation to employment and to the work of the Employment Service of Canada; the placement of handicapped workers, especially handicapped ex-service men; the problem of harvest labour supply for 1927; the mobility of labour and its relation to unemployment; the notification of industrial disputes to work seekers other than those registering at public employment offices; and the technique of employment offices. Recommendations for presentation to the Minister of Labour were drafted on these subjects, and will be submitted at a later date.

The meeting was presided over by Mr. C. P. Riddell of Montreal, chairman of the Council. The bodies represented and the representative in each case were as follows:—

Province of Nova Scotia, H. H. Congdon, Halifax; Province of New Brunswick, George R. Melvin, St. John; Province of Quebec, Jos. Ainey, Montreal; Province of Ontario, J. H. Ballantyne, Toronto; Province of Manitoba, J. A. Bowman, Winnipeg; Province of Saskatchewan, G. E. Tomsett, Regina; Province of Alberta, W. Smitten, Edmonton; Province of British Columbia, J. D. McNiven, Victoria; Canadian Manufacturers' Association, E. Blake Robertson, Ottawa; Trades and Labour Congress of Canada, R. Tallon, Montreal, Jas. Simpson (Vice-Chairman of the Council), Toronto; Railway Association of Canada, C. P. Riddell (Chairman of the Council), Montreal; Railway Brotherhoods, S. N. Berry, Cedar Rapids, Iowa; Canadian Council of Agriculture, J. W. Ward, Winnipeg; Department of Labour, Mrs. Chas. Caucutt, Kenora, Miss Mary McNab, Toronto, and V. C. Phelan (Acting Secretary), Ottawa; Returned Soldiers, T. C. Lapp, Ottawa; Department of Soldiers' Civil Re-establishment, Major E. Flexman, Ottawa; Association of Canadian Building and Construction Industries, J. Clark Reilly, Ottawa.

Election of officers for the ensuing year took place, and the following were elected: Chairman, James Simpson, Toronto; Vice-Chairman, T. C. Lapp, Ottawa; and Secretary, R. A. Rigg, Ottawa. Three additional executive members will be nominated by the Canadian Council of Agriculture, the Canadian Manufacturers' Association and the Trades and Labour Congress of Canada, respectively.

44157—6

EMPLOYMENT SITUATION AT THE BEGINNING OF JUNE, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of June showed a further pronounced gain that made the situation more favourable than in any other month since 1920. Statements were tabulated from 6,150 firms employing 876,768 workers, as compared with 832,872 on May 1; this increase of 43,896 persons, or 5.3 per cent, brought the index number to 105.9, as compared with 105.2 on Oct. 1, 1926, the previous high level in the last seven years. In the preceding month, the index stood at 100.6 and on June 1, 1926, 1925, 1924, 1923, 1922 and 1921, it was 101.0, 94.5, 95.2, 97.3, 89.2 and 86.6, respectively.

Unusually large advances for the time of year were recorded in manufacturing, while construction, transportation, mining, logging, and services also showed important increases.

Employment by Economic Areas

Expansion was noted in the five economic areas, Quebec firms adding the largest number of employees to their staffs.

Maritime Provinces.—Further improvement was noted in the Maritime Provinces, according to statistics received from 559 employers with a combined working force of 68,666 persons, as compared with 66,428 in the preceding month. Although this gain was rather smaller than that reported on June 1 last year, the index then was several points lower. Manufacturing (particularly of lumber, fish and pulp and paper products) and construction, registered heightened activity, while logging and transportation were seasonally slacker.

Quebec. — Transportation, construction, manufacturing and logging reported pronounced increases in personnel, while smaller gains were shown in mining and trade; the gain in logging was due to river driving operations. Employment was in considerably greater volume than on the corresponding date in any of the last six years, the index being four points higher than on June 1, 1926, although important advances were then indicated. Statements were tabulated from 1,377 firms employing 252,183 workers, or 16,471 more than in their last report.

Ontario.—The situation in Ontario was better than in any other month of the years since 1920, the index standing at 101.5, as compared with 95.2 at the beginning of June, 1926, when the trend was also upward. The payrolls of the 2,803 co-operating establishments aggregated 362,586 persons; on May 1, they had 350,094 employees. Construction, manufacturing, transportation and mining registered the greatest expansion, while logging and trade were seasonally quiet.

Prairie Provinces.—Construction, transportation, manufacturing and services reported the most marked improvement in the Prairie Provinces, where the 778 firms whose statistics were tabulated employed 114,036 persons, as against 106,058 in the preceding month. More extensive increases were indicated on June 1, 1926, but the index then was several points lower.

British Columbia.—An aggregate payroll of 79,297 workers was registered by the 673 reporting employers, who had 74,590 at the beginning of May. This increase of over 4,700 employees was the largest noted on June 1 in any year since the record was instituted in 1920; employment was in slightly greater volume than in the early summer of the last seven years. As in the other provinces, construction, manufacturing and transportation recorded the most noteworthy expansion on the date under review, but a favourable tendency was generally in evidence.

Table I gives index numbers by economic areas.

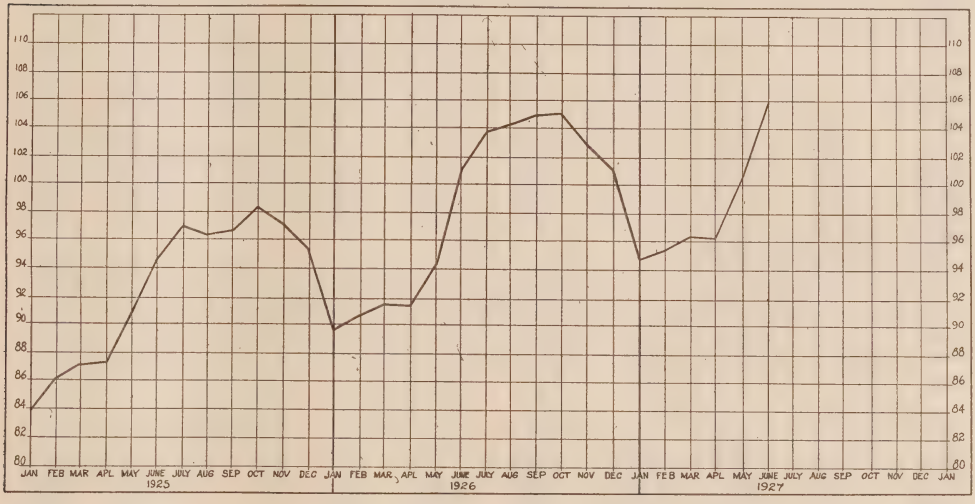
Employment by Cities

The trend of employment was decidedly upward of seven of the eight cities for which separate compilations are made; Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver showed considerable gains, while moderate declines were noted in Windsor and other Border Cities.

Montreal.—Improvement on a smaller scale than on June 1, 1926, was noted in Montreal, where the 722 co-operating firms reported 117,957 persons, an increase of 2,946 over their May 1 staffs. Transportation, construction and trade reported the greatest increases, but manufacturing as a whole was slightly slacker. The index was the same as on the corresponding date last year.

Quebec.—Continued gains were registered in Quebec City, chiefly in the construction and transportation industries, while manufacturing showed a falling off. Statements were tabulated from 90 establishments employing 10,223

workers, as against 9,622 in the preceding month. Considerable declines were indicated on June 1 last year, when the index was lower. Employment at the beginning of June was in greater volume than in any other month of the record, which for this city goes back to 1924.



Toronto.—The situation in Toronto continued to be more favourable than in any other month in the five years for which statistics are available, according to returns furnished by 797 employers with 104,259 persons on their payrolls, compared with 102,707 on May 1. Manufacturers were rather busier, while considerable improvement was shown in construction. The gain exceeded that noted in the same month of 1926. Conditions were much better than on June 1 a year ago.

Windsor and the Other Border Cities.—Curtailment was registered in automobile factories in the Border Cities, but construction showed more activity. The 93 firms furnishing data reported 11,061 employees, or 132 less than in the preceding month. Employment was in smaller volume than on the same date last year.

Winnipeg.—An aggregate working force of 27,501 persons was registered by the 279 employers whose statistics were received and who had 26,954 employees on May 1. Although this gain was less extensive than that noted at the beginning of June, 1926, the index was several points higher. The greatest improvement took place in construction, but manufacturing was also busier, while there was a moderate reduction in trade.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Ottawa.—Manufacturing, construction and transportation recorded heightened activity in Ottawa, where employment was at a higher level than at the beginning of June last year, although the advance then was larger. A combined working force of 11,268 persons, or 395 more than in their last report, was employed by the 136 co-operating firms.

Hamilton.—Additions to staffs on practically the same scale as on the corresponding date in 1926 were reported in Hamilton; 205 employers had 30,516 workers on their paylists, as compared with 29,852 at the beginning of May. Most of the expansion took place in manufacturing, notably in iron and steel plants, but other industries were also busier.

Vancouver.—Construction and transportation reported the bulk of the gain in Vancouver, where manufacturing was rather slacker, chiefly in lumber and iron and steel works. Statements were tabulated from 235 employers with 26,070 workers in their employ, or 544 more than on May 1. Contractions were indicated on June 1 a year ago, when the situation was not so favourable.

Index numbers by cities are given in Table 2.

NOTE.—Number employed by the reporting firms in January, 1920, is taken as 100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS AND OF DOMINION EMPLOYMENT IN MANUFACTURING

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing

Manufacturing

Statements were tabulated from 3,916 manufacturers employing 488,242 operatives, as compared with 474,731 in the preceding month. This increase was more extensive than that reported on June 1 in most years of the record, while the index was lower in each of the last six years. Lumber mills registered the greatest gains, these being of a seasonal nature, while important advances were also made in fish preserving, pulp and paper, vegetable food, building material, rubber, elec-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	[1]Relative Weight	June 1 1927	May 1 1927	June 1 1926	June 1 1925	June 1 1924	June 1 1923

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review

tric current and some other industries. On the other hand, iron and steel and textile plants were seasonally slacker.

Animal Products—Edible.—There were further pronounced increases in the number engaged in this group, particularly in the fish-preserving branch in the Maritime Provinces and British Columbia. Statistics were tabulated from 243 firms employing 18,294 persons, as compared with 16,005 in the preceding month. This increase, which exceeded that reported in earlier years, brought the index number to a higher point than on June 1 in any other year since the record was begun in 1920.

Leather and Products.—Employment in this group, chiefly tanneries, showed a small falling off as compared with the extensive losses registered at the beginning of June, 1926. The index was slightly higher than on the corresponding date in any of the last six years. The working force of the 191 co-operating employers totalled 16,980, as against 17,037 operatives in the preceding month. There were minor reductions in all except the Maritime Provinces.

Lumber and Products.—Continued seasonal expansion was indicated in lumber mills, while container, match and other wood-using factories were also busier. Returns were compiled from 734 manufacturers in the lumber group, having 55,501 employees, compared with 48,605 at the beginning of May. All provinces shared in the upward movement indicated on June 1, the largest gain taking place in Ontario and the Maritime Provinces. Rather greater advances were made on the corresponding date last year, but the index number then was slightly lower.

Plant Products—Edible.—Unusually large increases were noted in this group at the beginning of June, when 1,042 persons were added to the payrolls of the 308 co-operating manufacturers, who had 26,724 employees. Starch and glucose, sugar and syrup and fruit and vegetable preserving establishments recorded most of the gain, which was chiefly reported in Quebec, Ontario and British Columbia. The increase registered on June 1, 1926, was considerably smaller and the index number then was several points lower.

Pulp and Paper Products.—The additions to staffs in the pulp and paper group were larger than in any other month since 1920, bringing employment to its highest point in the record of eight years. An aggregate payroll of 59,968 workers was reported by the 472 establishments, whose statistics were compiled and who employed 57,641 in the preceding month. Pulp and paper mills registered the bulk of the gain, although printing and publishing shops were rather busier. Quebec reported most of the advance, but the trend was upward throughout the country.

Rubber Products.—Thirty-three rubber factories recorded a combined working force of 14,203 persons, or 326 more than in their last return. Quebec and Ontario plants absorbed practically all these extra operatives. Employment was in considerably greater volume than at the beginning of June a year ago, when an increase on practically the same scale was noted.

Textile Products.—Following four months of uninterrupted expansion, there was a seasonal decline in employment in textiles on the date under review, chiefly in clothing factories in Quebec. Ontario, on the other hand, showed improvement. Data were received from 512 firms employing 75,720 persons, as against 76,075 in the preceding month. This contraction was much smaller than that indicated on June 1 last year, when the index number was some six points lower.

Tobacco, Distilled and Malt Liquors.—Tobacco factories on the whole were seasonally slacker, but a gain was shown in beverage works, according to 108 firms in this group, whose staffs increased from 12,333 workers on May 1 to 12,551 at the beginning of June. Quebec and Ontario registered most of this advance, which contrasted with the reduction noted on the corresponding date last year. The index number then was several points lower.

Chemicals and Allied Products.—Statements were tabulated from 113 employers in this group, with 6,893 persons on payroll as against 6,770 in the preceding month. The index number was rather higher than on June 1, 1926; similar gains were then indicated.

Clay, Glass and Stone Products.—Further improvement on a larger scale than in previous years of the record was shown in building material plants, 117 of which reported an aggregate working force of 10,564 persons, or 845 more than in the preceding month. Employment was in greater volume than on June 1 in any other year since 1920. A considerable share of the increase took place in Quebec, Ontario and the Prairie Provinces.

Electric Current.—Employment in electric current works continued to expand; the gain was, however, not as large as on the corresponding date a year ago, although the index number then was over eight points lower. The 88 co-operating companies enlarged their staffs by 311 workers to 12,710 at the beginning of June. The largest advance took place in British Columbia and Quebec, although the tendency was upward throughout the country.

Iron and Steel Products.—There was a moderate decline in employment in the iron and steel group; land vehicle, machine and agricultural implement shops and foundries were slacker, while iron and steel fabrication works recorded heightened activity. Returns were tabulated from 642 manufacturers who released 871 employes, reducing their staffs to 132,269 on the date under review. The Western Provinces recorded the largest losses, but the tendency was unfavourable everywhere except in Ontario. Additions to staff had been indicated on the corresponding date in 1926, when the index number stood at 84.1, or 1.4 points lower than on June 1, 1927.

Non-Ferrous Metal Products.—Further expansion was reported in this group, contrasting with the reductions made on the same date last year, when the index number was lower. The 106 firms furnishing data employed 16,694 workers, compared with 16,520 at the beginning of May. Most of the increase took place in the Maritime Provinces and Quebec.

Mineral Products.—Continued seasonal advances were noted in this group, exceeding those reported on the corresponding date last year, when the index number was a few points lower. The oil and some other divisions of this group reported heightened activity. An aggregate payroll of 10,100 persons was employed by the 73 co-operating firms, who had 9,804 in the preceding month. Most of the increase took place in Ontario.

Logging

Employment in logging camps showed an advance, which, however, was less extensive than on the corresponding date in 1926, when the index was slightly higher. Returns were received from 222 firms employing 20,323 workers, or 954 more than in the preceding month. River drives in Quebec and general increases in British Columbia more than offset declines in the Maritime Provinces and Ontario.

Mining

Coal.—Further losses in personnel were noted on coal mining on June 1, as has been usual on that date in many years of the record. The level of employment, however, was higher than in 1926 or 1925. Statements were compiled from 88 operators, with 25,813 employees, or 236 less than in the preceding month. There were moderate decreases in both Eastern and Prairie coal fields.

Metallic Ores.—Considerable improvement was shown in metallic ores in Quebec, Ontario and British Columbia; 51 employers enlarged their staffs from 11,829 workers on May 1 to 12,285 at the beginning of June. The index number was higher than in any other month since the record was begun in 1920. Practically no change in the situation was noted on the corresponding date last year.

Non-Metallic Minerals (Other than Coal).—According to data received from 69 firms in this group, they employed 7,057 persons, or 769 more than in the preceding month. This increase, which slightly exceeded that indicated in any other month of the record, brought the index number to its peak for the last eight years. Quebec and Ontario reported the greatest gains, but the tendency was upward in all provinces.

Transportation

Street Railways and Cartage.—A further increase in employment was reported in local transportation on June 1, when 115 firms added 228 employees to their staffs, bringing them to 20,489 on the date under review. This gain was smaller than that registered on the corresponding date in 1926, but the index number then was four points lower. Improvement was shown in all provinces, notably in Quebec and Ontario.

Steam Railways.—Continued and greater advances were noted in steam railway operation at the beginning of June, when the 99 co-operating employers enlarged their staffs by 2,414 persons to 78,649. Ontario and the Prairie Provinces reported most of the increase, which exceeded that registered on the corresponding date last year, when the index was lower.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, while in Quebec and British Columbia the trend was upward. Statistics were received from 60 firms with 15,905 workers, as compared with 14,106 in the preceding month. More noteworthy advances were indicated on June 1, 1926; the index number then was higher.

Construction and Maintenance

Building—The volume of employment afforded in building was greater than in the early summer of any other year of the record, which goes back to 1920. An aggregate working force of 36,772 persons was reported by the 429 contractors furnishing statistics, who had 33,223 employees on May 1. Although activity increased in all provinces, the largest gains took place in Ontario. The additions registered were somewhat smaller than on the

corresponding date last year; building operations in 1927 apparently commenced earlier in the season, for the increase reported at the beginning of May was considerably in excess of that noted on May 1, 1926, as was the gain in the two months as compared with May and June a year ago.

Highway.—The 126 highway and road contractors furnishing statistics reported 17,113 persons in their employ, or 9,062 more than in their last returns. This improvement, in which all provinces shared, was more pronounced than on any date in 1926, and the level of employment was considerably higher than on June 1 last year.

Railway.—Continued advances were registered by the track departments of the railways, but the expansion was smaller than at the beginning of June 1, 1926. The working force of the 36 reporting employers totalled 50,650 persons, as against 39,838 in the preceding month. The most extensive gains were in the Prairie Provinces; additions to staff were, however, generally indicated throughout the country.

Services

The re-opening of summer hotels afforded considerably heightened employment in the service group; although the increase was not so pronounced as at the beginning of June a year ago, the situation then was less favourable. Statements were compiled from 176 establishments employing 15,629 workers, as against 15,172 in their last report. A large share of the increase took place in the Prairie Provinces.

Trade

Improvement in retail stores was partly offset by declines in wholesale establishments; 576 trading firms reported 62,734 employees, or 76 more than on May 1. This gain was slightly larger than that noted on the corresponding date in 1926, when the number of persons engaged in this group was decidedly smaller. Quebec firms registered greater activity, while in Ontario the trend was downward, and elsewhere the changes were small.

Table I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on June 1, 1927.

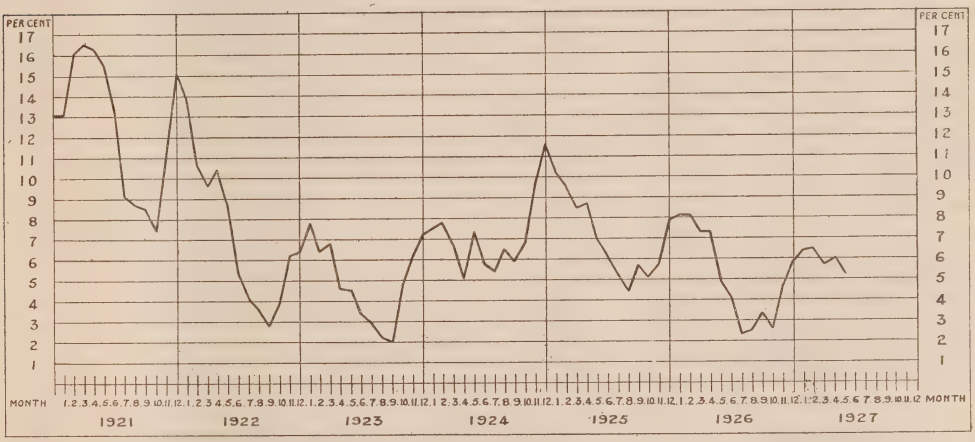
UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF MAY, 1927

THE term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Statements tabulated from 1,576 local trade unions, representing 163,754 members, indicated slight improvement of a general character during May, the percentage of idleness standing at 5.2 at the end of the month, as compared with 6.0 per cent at the close of the previous month. There was very little change in comparison with May last year, when 4.9 per cent of the members were out of work. All provinces with the exception of Nova Scotia and British Columbia registered a greater volume of employment than in April, and the reductions in these two provinces were quite small. Of the gains in the remaining provinces, that of 3.4 per cent in Saskatchewan and of 2.5 per cent in Manitoba, were the most substantial, due in both cases to improvement in building and construction and steam railway operation. When making a comparison with the returns for May last year, the New Brunswick, Quebec, Saskatchewan and Alberta situation improved slightly, while in the other provinces there were small offsetting reductions. The changes, however, were not pronounced in any one province.

A separate tabulation is made of the trade union situation in the largest city in each province except Prince Edward Island. Montreal, as in April, reported the greatest percentage of inactivity of any city used in this comparison, though the May conditions, when 12.1 per cent of the members were unemployed, were a slight improvement over those of the previous month. Halifax and Vancouver, each reported 5.1 per cent of idleness. The Toronto situation remained unchanged, 3.9 per cent of the members being idle both in April and in May. The most favourable situ-

ation for the month under review was reported by Regina with 1.4 per cent of unemployed members.



The accompanying chart traces the curve of unemployment by months from 1921 to date. The trend during the period under review, contrary to its course in April, projected slightly downward, showing somewhat improved conditions. The level of unemployment was, however, slightly higher than that attained during the corresponding month of last year.

Reports were tabulated from 428 unions in the manufacturing industries with 46,442 persons, 4,121 or a percentage of 8.9 of whom were out of work at the end of May, as compared with 9.9 per cent in April. The nominal gain in employment registered over April may be attributed to a rather general increase in activity throughout the various groups of the manufacturing industries, chiefly the pulp and paper, and textile and garment divisions. In comparison with the returns for May last year, when 9.6 per cent of unemployment was registered, the situation for textile and garment, leather and glass workers, bakers, cigar makers, printing tradesmen, metal polishers, and hat and cap workers improved, and slight reductions occurred among papermakers, iron and steel, brewery and wood workers.

In the coal mining division, where returns were received from 27 unions with 11,993 members, 8.5 per cent of the members were idle, as compared with 7.5 per cent in April. In the Nova Scotia mines slightly less employment was afforded than in April, but in Alberta there was an almost 4 per cent gain. From the British Columbia mines no idle members were reported as in April. The situation in the coal mines improved over May last year, when the unemployment percentage stood at 10.1. In this comparison Nova Scotia miners registered greater inactivity, but the Alberta mines were busier. Quarry workers in Nova Scotia were better employed than in April, but less fully engaged than in May of last year.

The building trades, with 175 unions reporting 17,972 members, showed a further though moderate advance in employment, 9.3 per cent of the members being out of work at the end of May, as compared with 11.9 per cent in April. The greatest expansion was indicated among carpenters and joiners and granite and stonecutters, followed by lesser gains among

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS
Quarterly 1916-1921, Monthly 1922-1926

hodcarriers and building labourers, plumbers and steamfitters, and bricklayers, masons and plasterers. On the other hand, employment for bridge and structural iron workers, painters, decorators and paperhangers, tile layers, lathers and roofers, and electrical workers declined. In comparison with the returns for May last year when 7.4 per cent of the members were idle, the situation for granite and stonecutters, and hod carriers and building labourers was considerably better, and there was also improvement among steam shovel and dredgemen, plumbers and steamfitters, and carpenters and joiners. Of the counteracting reductions, the most substantial were reported by bricklayers, masons and plasterers, and bridge and structural iron workers, though tile layers, lathers and roofers, painters, decorators and paperhangers, and electrical workers also contributed a share.

The transportation industry showed little variation during May from the April level, but the small change indicated was toward les-

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Miscellaneous	Government	All occupations

sened unemployment. This was shown by the returns tabulated from 629 unions with 56,216 members, 1,160 of whom were idle, or a percentage of 2.1, as against a percentage of 2.8 in April. The steam railway division, whose returns constitute nearly 83 per cent of the entire group membership reporting was the determining factor in the advance movement of employment, assisted by minor gains in the street and electric railway division. The situation, however, in the shipping and stevedoring division was somewhat adverse. In comparison with the returns for May of last year, no change occurred in the percentage of idleness for the transportation, group as a whole, though within the group there were fluctuations. The movement in the various divisions of the group was similar to that in the previous comparison, steam and street and electric railway employees all indicating a higher level of employment, and navigation workers reductions, but in this comparison the gains were just sufficient to offset the contractions.

Longshore workers for whom a separate tabulation is made reported 17.2 per cent of the members idle in May, as compared with a percentage of 16.4 in April. An increase in unemployment was also reported over May of last year when 14.7 per cent of the members were without work.

From public employees, whose returns included 142 unions with 12,807 members, greater activity was registered during May than in the previous month, and a nominal change for the better over the same month of last year. The gain in both comparisons was due to the more favourable situation prevailing among civic employees.

Reports were tabulated from 109 unions in the miscellaneous groups of trades with 5,179 members, 6.6 per cent of whom were out of work on May 31 as compared, with 5.5 per cent in April, and 4.8 per cent in May last year. Stationary engineers and firemen, and theatre and stage employees were slacker than in April, but among hotel and restaurant employees there was a greater volume of work afforded. Barbers reported the same percentage of inactivity as in April. In comparison with May of last year, greater unemployment was registered by stationary engineers and firemen, and theatre and stage employees, and nominal gains by hotel and restaurant employees and barbers.

Fishermen were slightly less active during May than in both the previous month and May last year, indicating the same percentage of change in both comparisons, namely 4.6. Lumber workers and loggers again reported all their members at work as in April, but in May last year there was about 5 per cent of idleness recorded.

Table II on this page summarizes the returns by provinces for May of each year from 1919 to 1924 inclusive, and for each month from January, 1925, to date, and Table I on page 782 shows the percentage of unemployment registered in the various groups of industries for the same months.

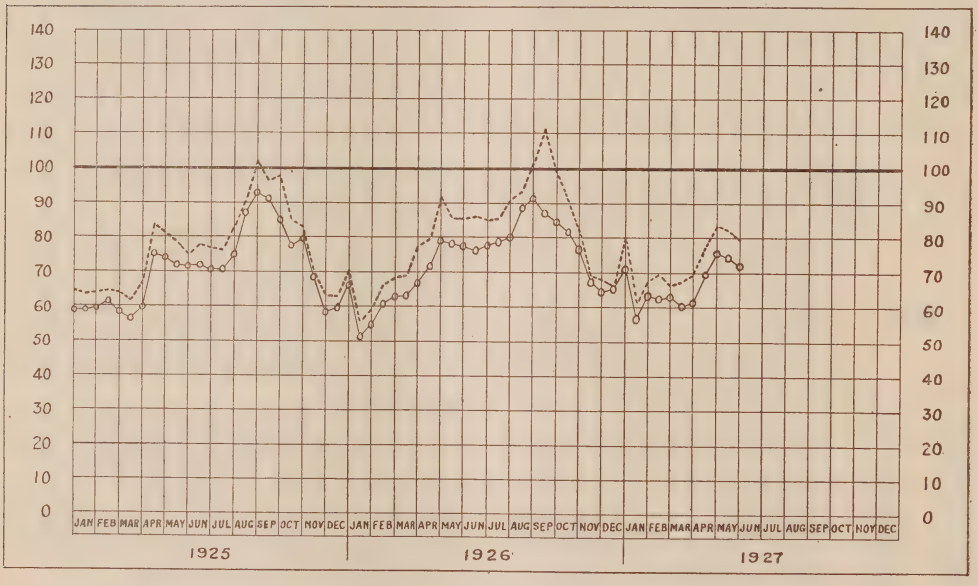
In the first six months of 1927 the Ontario Compensation Board awarded $2,991,891, of which $522,994.34 was for medical aid. The total benefits in the first half of 1927 were higher than in the first period of 1926 by over a quarter of a million dollars. The total number of accidents reported to the Compensation Board in the first half of 1927 was 33,686, of which 186 were fatal. These figures also show an increase over the same period in 1926, when there were 29,631 accidents reported, including 147 fatalities. During the month of June, 1927, there were 6,446 accidents reported to the Board, of which 47 were fatal, these figures being the highest for any month in 1927.



EMPLOYMENT OFFICE REPORT FOR MAY 1927

THE volume of business transacted in the offices of the Employment Service of Canada, as shown by the average daily placements effected during the month of May, 1927, showed a gain of 3 per cent over that transacted during the previous month, but a decline of 4 per cent was registered when a comparison was made with the work effected by the Service during the corresponding period last year. All industrial divisions showed improvement over last month, except farming, communication and transportation but increased placements in the construction and service groups were mainly responsible for the gain shown, farming showing the only decline of importance. In comparison with last year the decline was general in all industries, only logging and farming showing improvement to any extent.

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined slightly throughout the month, and at the close of the period were about 6 points lower than those registered at the end of May, 1926. The ratio of vacancies to each 100 applications was 82.3 and 79.4 during the first and second half of May, 1927, in contrast with the ratio of 85.6 and 85.5 during the same periods in 1926. The ratio of placements to each 100 applications during the periods under review was 74.4 and 72.0, as compared with 78.3 and 77.4 during the coresponding month a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - Placements o—o—o—o—o—o

A summary of the reports from the offices showed that the average number of applications reported daily during the first half of May was 1,803, as compared with 1,929 daily during the preceding period, and with 1,678 daily during the corresponding period in 1926. Applications for work during the latter half of the month registered 1,725 daily in contrast with 1,783 daily during the latter half of May a year ago.

Employers notified the Service of a daily average of 1,485 vacancies during the first half, and of 1,369 during the latter half of the month under review, as compared with a daily average of 1,436 and 1,526 vacancies during the month of May, 1926. Vacancies offered

to the Service during the latter half of April, 1927, averaged 1,609 daily.

The Service effected an average of 1,342 placements daily during the first half of May, of which 918 were in regular employment and 424 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,456 daily, and of 1,315 daily during the first half of May, 1926. During the latter half of the month under review, placements average 1,243 daily (809 regular and 434 casual), as compared with an average of 1,381 daily during the coresponding period a year ago.

During May, 1927, the offices of the Service referred 33,632 persons to vacancies and effected a total of 32,249 placements. Of these the placements in regular employment numbered 21,526, of which 17,785 were of men and 3,741 of women, while placements in casual work totalled 10,723. Opportunities for employment numbered 24,885 for men and 10,719 for women, a total of 35,604. The number of applications for work was 44,052, of which 32,546 were from men and 11,506 from women.

The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927 (5 months)	82,626	41,414	124,040

Nova Scotia

Opportunities for employment, as indicated by orders received at employment offices in Nova Scotia during May, were over 6 per cent better than in the preceding month and showed an improvement of 22 per cent when compared with the corresponding month last year. There was a gain of nearly 8 per cent in placements when compared with April, and of nearly 7 per cent in comparison with May, 1926. Fewer placements were recorded in logging, mining and transportation during the month under review than in May last year, but all other industrial divisions showed gains. Industrial groups in which most of the placements were effected during the month were: manufacturing, 121; construction and maintenance: 84, trade, 78; and services, 435, of which 319 were of household workers. Positions in regular employment were secured for 207 men and 54 women during the month.

New Brunswick

There was an increase of nearly 29 per cent in the number of positions offered through offices in New Brunswick during May, when compared with the preceding month, but a decline of nearly 6 per cent in comparison with the corresponding month last year. Placements were nearly 45 per cent higher than in April, but were over 8 per cent below May, 1926. Reduced placements under transportation and trade caused the decline from May last year, there being minor changes only in the other industrial groups. During the month 226 placements were effected under construction and maintenance, and 622 in the services division. Of the latter 454 were of household workers. Placements in regular employment numbered 257 of men and 66 of women.

Quebec

Employment opportunities as indicated by orders listed at offices in the Province of Quebec during May were over 15 per cent less favourable than in the preceding month, and over 17 per cent fewer than in the corresponding month last year. Slightly higher percentages of decline were recorded under both comparisons in placements. The reduction in placements from last year was almost entirely due to a smaller demand for building construction workers, as the changes in other industries were small. Logging showed the largest gain. Placements by industrial groups included: manufacturing, 222; logging, 268; farming, 74; transportation, 53; construction and maintenance, 609; trade, 59; and services, 640, of which 366 were of household workers. During the month 1,408 men and 499 women were placed in regular employment.

Ontario

During the month of May positions offered through employment offices in Ontario were over 21 per cent higher than in the preceding month, but the number showed a decline over one per cent when compared with the corresponding month last year. There was an increase of over 20 per cent in placements when compared with April, but a reduction of nearly 4 per cent in comparison with May, 1926. Mining and logging showed the greatest gains in placements over May last year, and transportation, construction and maintenance, and services showed the largest declines. The changes in other groups were small. Indus-

trial divisions in which most of the placements were effected during the month were: manufacturing, 1,717; logging, 1,182; farming, 812; mining, 153; transportation, 381; construction and maintenance, 3,610; trade, 335; and services, 4,841; of which 2,645 were of household workers. Placements in regular employment during the month numbered 7,332 of men and 1,385 of women.

Manitoba

There was a decline of nearly 7 per cent in the number of positions offered through offices in Manitoba during May when compared with the preceding month, and of nearly 9 per cent when compared with the corresponding month last year. Placements were over 3 per cent less than in April, and nearly 4 per cent below May, 1926. Farming and construction and maintenance showed the most improvement in placements over May last year, but these gains were more than offset by reductions in services. The changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 158; logging, 138; farming, 833; construction and maintenance, 435; trade, 170; and services, 2,174, of which 1,572 were of household workers. During May 1,393 men and 649 women were placed in regular employment.

Saskatchewan

The demand for workers, as indicated by orders listed by offices in Saskatchewan during May, increased over 3 per cent when compared with the preceding month, and nearly 15 per cent when compared with the corresponding month last year. Placements were nearly 9 per cent higher than in April, and over 17 per cent in excess of May, 1926. All groups except construction and maintenance, mining and communication showed increased placements over May last year, but in the two latter the decline was nominal only. Farming showed the largest gain. Placements by industrial groups included: manufacturing, 152; farming, 2,002; construction and maintenance, 662; trade, 160; and services, 1,160, of which 604 were of household workers. Regular employment was secured for 2,714 men and 402 women during the month.

Alberta

During May orders received at employment offices in Alberta called for nearly 10 per cent fewer workers than in the preceding month, and nearly 5 per cent fewer than in the corresponding month last year. There was a decline of nearly 7 per cent in placements when compared with April, and of nearly 5 per cent in comparison with May, 1926. Transportation, services and trade were the only groups in which more placements were made this May than last, but the declines in other groups were small. Industrial division in which most of the applicants were placed during the month were: manufacturing, 307; logging, 74; farming, 2,000; construction and maintenance, 699; trade, 108; and services, 878, of which 521 were of household workers. Placements in regular employment numbered 3,028 of men and 383 of women.

British Columbia

Orders listed at employment offices in British Columbia during May called for nearly 15 per cent more workers than in the preceding month, but were over 19 per cent lower than in the corresponding month last year. There was a gain of nearly 7 per cent in placements over April, but a decline of nearly 20 per cent when compared with May, 1926. All groups except logging, services and trade participated in the declines in placements from May last year, those in construction and maintenance being the most pronounced. Placements by industrial groups during the month included: manufacturing, 462; logging, 389; farming, 210; mining, 98; transportation, 205; construction and maintenance, 573; trade, 111; and services 1,005, of which 551 were of household workers. Positions in regular employment were secured for 1,446 men and 303 women during the month.

Movement of Labour

During May, 1927, the offices of the Employment Service of Canada made 21,526 placements in regular employment of which 12,710 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,850 were granted the Employment Service reduced transportation rate, 1,406 going to points within the same province as the despatching office and 444 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate from Quebec offices numbered 146 of which 43 were for points within the province and 103 for outside points. The provincial certificates were issued by the Montreal office to 22 saw mill

labourers and 21 bushmen for employment within the Montreal zone. In addition Montreal sent 23 bushmen outside the province to camps in the vicinity of Sault Ste. Marie and Hull transferred 80 bushmen to the North Bay district.

The offices in Ontario granted 592 certificates to persons travelling at the reduced rate, 590 of which were provincial and 2 interprovincial. The latter were for 2 miners transferred from Pembroke to employment in the Hull zone. Provincially, 372 of the certificates were for bush labourers going to logging areas in the northern parts of the province from the Sudbury, Toronto, Fort William, Port Arthur and North Bay offices. Sudbury also despatched one cook to Niagara Falls, 2 miners to Sault Ste. Marie, and 45 mill hands and 4 carpenters within its own zone and Port Arthur 4 miners, 18 construction labourers and 14 survey men to employment within its zone. The remainder of the movement from Toronto included 3 rockmen and one rock foreman transferred to Port Arthur, 3 labourers and one sawyer to North Bay, one machinist to Cobalt and one electric welder, one boilermaker and one machinist to Kingston. From North Bay 32 railway construction labourers, 4 carmen, 2 building construction labourers and one millright fitter went to Timmins and 59 railway, highway and building construction labourers to Cobalt. London transported one drill hand and one boat builder to Peterboro and one cook to Kingston, Pembroke 4 miners to Timmins and 4 labourers to Port Arthur and St. Catharines, 2 brass finishers to Peterboro and 4 polishers to Kingston. Kingston also received one polisher from Hamilton and 2 masons from Windsor.

In Manitoba 504 reduced rate certificates were issued, 255 to persons going within the Province and 249 to other provinces. From Winnipeg one office clerk, 15 pulp cutters, 2 farm labourers, 8 bushmen, 2 porters, one setter and one female hotel worker went to employment in the Dauphin zone; 124 farm labourers, 12 farm household workers, 6 female hotel employees, 3 carpenters and one waitress were sent to Brandon and 24 teamsters, 18 farm hands, 9 building labourers, 2 farm domestics, 6 carpenters, one hotel cook, one housekeeper and one foreman travelled to points within the Winnipeg zone. The Dauphin office despatched 17 bushmen to points within its own zone. All of the interprovincial transfers were effected by the Winnipeg office, 10 labourers going to North Battleford, 15 carpenters and one cook to Saskatoon, 20 carpenters, 2 cooks, one upholsterer and one blacksmith to Regina, one cook to Yorkton, 4 female hotel workers to Estevan and 46 farm hands and 6 farm household workers to various points in Saskatchewan. In addition Port Arthur received 31 wood and pulp cutters, 29 saw mill labourers, 3 farm labourers, 7 road cutters, one porter, 5 female hotel workers, one edgerman, 8 cooks, 2 teamsters, 2 cookees and one lumber grader; Timmins received 50 labourers and Hull 2 steel workers.

Those who availed themselves of reduced rate certificates in Saskatchewan numbered 163 of whom 158 were for points within the province and 5 for other provinces. Of the former, 111 were farm workers, the majority going from Moose Jaw and Saskatoon to points within their own zones. Saskatoon also transferred 3 cooks, one engineer, 3 cookees and one labourer to Prince Albert, 2 telephone labourers to Swift Current and 4 carpenters, 3 labourers, one cook and one teamster to employment within its own zone. Moose Jaw despatched one cook to Regina and 9 teamsters, 2 cooks and one kitchen worker to points within the Moose Jaw zone. From Regina 10 track men and one telephone labourer went to Saskatoon and one sheep herder to Swift Current and from Prince Albert 3 bushmen were sent to logging districts within the zone. Of those going outside the province Regina transferred 3 bridge carpenters and one domestic to the Winnipeg zone and one bushman to the Port Arthur zone.

In Alberta 263 persons travelled at the reduced rate, 227 to provincial points and 36 to other provinces. Within the province the transfers effected by the Calgary office included 33 farm hands and one porter going to Drumheller, 2 miners, 5 farm hands and 2 labourers to Edmonton, 2 machinists to Lethbridge and 21 farm hands, one lather and one female hotel worker to points in the Calgary zone. The Edmonton office issued certificates to 85 farm hands, 19 mill hands, 4 sawyers, 3 blacksmiths, 3 track men, one hookman, 5 labourers, one teamster, one miner, 2 mine labourers, one planerman, one fireman, one maid, 2 carpenters, 4 cooks, 7 bushmen, 3 hotel workers, one engineer, 3 housekeepers and one machinist, all of whom went to points within the Edmonton office. Lethbridge received 3 farm hands and Calgary one elevator carpenter, one cookee and 5 farm hands also from the Edmonton office. Calgary received one farm domestic from Medicine Hat. Of those going without the province 35 were farm labourers for points in Saskatchewan, practically all of whom were sent by the Edmonton office and one was a hotel cook going from Calgary to Cranbrook.

The British Columbia offices issued 182 certificates for special transportation, 133 of which were provincial and 49 interprovincial. Provincially Vancouver transferred 22 stationmen, 12 building labourers, 4 carpenters, 2 farm hands, 2 firemen, one assayer, one cook and one flunkey to Penticton, 2 ranch hands, one flunkey, 5 miners, one farm hand, 2 muckers, 2 sawyers, 2 cooks and one engineer to Kamloops, one filer, one engineer, and one millwright to Vernon, one saw filer and one office clerk to Nelson, 4 miners and one engineer to Revelstoke, one engineer to Cranbrook and 13 labourers, 2 carpenters, 2 flunkeys, 2 cooks, one waitress and one farm labourer to points within the Vancouver zone. Prince George sent 4 railroad construction labourers to Kamloops and Nelson, 3 miners to Cranbrook and one miner to Penticton. From Prince Rupert 2 miners and from Penticton one farm labourer went to employment within their respective zones. The remaining 29 provincial transfers were of bushmen for points around Prince George, Kamloops and Nelson. The interprovincial movement was practically towards the agricultural districts of the prairie provinces, Alberta receiving 26 farm hands, Saskatchewan 17 farm hands and one farm domestic and Manitoba 3 farm hands. The majority of these received certificates from the Vancouver office. Vancouver also transported one cook to each of the Calgary and Saskatoon zones.

Of the 1,850 persons who benefited by the Employment Service reduced transportation rate, 975 were carried by the Canadian National Railways, 761 by the Canadian Pacific Railway, 94 by the Temiskaming and Northern Ontario Railway, 19 by the Pacific Great Eastern Railway and one by the Kettle Valley Railway.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Construction: Buildings and Structures

HALIFAX, N.S.—THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 83.

Agreement effective from May 1, 1927.
Wages per hour, 60 cents.
The hours worked are 44 per week.

HALIFAX, N.S.—MASTER PAINTERS OF HALIFAX AND DARTMOUTH, AND BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL NO. 425.

Agreement to be in effect from May 1, 1927, until May 1, 1928.
Wages, per hour, 60 cents.

Overtime, from 5 to 10 p.m., time and one-half; thereafter, double time. One hour at midnight for lunch.
Workmen outside of the city limits shall have all expenses paid.
Work on Sundays and holidays, double time. No work on Labour Day.
Only absolutely necessary work to be done on Saturday afternoons, rate being time and one-half.
No member shall work on his own account after 5 p.m., without consent of employer.

MONTREAL, QUE.—CERTAIN LOCAL EMPLOYERS AND INTERNATIONAL ASSOCIATION OF PLASTERERS AND CEMENT FINISHERS, LOCAL NO. 33.

Agreement to be in effect from May 1, 1927, until May 1, 1928.
Hours, 8 per day; 4 on Saturdays.
Work on Saturday afternoon only when permitted by the business agent.
The agreement is similar to that summarized in the LABOUR GAZETTE for October, 1925.

TORONTO, ONTARIO.—THE ITALIAN MOSAIC AND TILE CO., ITALIAN MOSAIC AND MARBLE CO., AND THE ART MOSAIC AND TILE CO., AND LOCAL 56, TERRAZZO WORKERS' HELPERS, AFFILIATED WITH THE MARBLE, SLATE AND STONE POLISHERS', RUBBERS' AND SAWYERS', TILE AND MARBLE SETTERS', INTERNATIONAL UNION OF AMERICA.

Agreement to be in effect from January 1, 1927, until December 31, 1927
No striking or leaving work until such matter as is under dispute has been brought before a joint arbitration committee. Such committee shall consist of one representative of each employer and one of each group of employees.
Minimum wages, per hour, 45 cents.

After January 1, 1927, men considered competent by the employers shall receive an increase of 5 cents per hour every three months until a maximum of 55 cents per hour is reached. Any helpers who can qualify as first class improvers may after three more months receive 60 cents per hour.

Hours, 44 per week, 8 per day. Overtime, time and one-half. Saturday afternoon, Sundays and legal holidays, double time. No work on Labour Day except to save life or property.

This agreement to apply to new work only. A list of all existing contracts to be supplied to employees.

On work out of town, $6 per week to be allowed for board, railway, and travelling time up to 8 hours per day.

On out-of-town work, local labour may be employed on carrying of materials, mixing, etc., but not on polishing or use of roller. Unemployed members of the union, resident in Toronto, shall be employed if capable of performing their duty. Such competent helpers, if unemployed, shall be given preference in jobs outside of Toronto, transportation to jobs being paid by the employer.

TORONTO, ONTARIO.—DISTRICT NO. 4 INTERNATIONAL CUT STONE CONTRACTORS' AND QUARRYMEN'S ASSOCIATION, INC., AND JOURNEYMEN STONECUTTERS' ASSOCIATION OF NORTH AMERICA, TORONTO BRANCH.

Agreement to be in effect from May 1, 1927, until April 30, 1928.

Wages, per hour, $1.12½. Wages to be paid weekly, not more than one day's time being kept on hand. When workmen are discharged wages due are to be paid at time of dismissal.

The remainder of the agreement is similar to one published in the LABOUR GAZETTE in September, 1925. The following clause has been added: No apprentice shall be allowed to use the air tool during the first 12 months of his apprenticeship.

TORONTO, ONTARIO.—CANADIAN AUTOMATIC SPRINKLER ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS, STEAMFITTERS AND SPRINKLER FITTERS OF THE UNITED STATES AND CANADA.

Agreement to be in effect from October 1, 1926, until September 30, 1929, and from year to year unless 6 months' notice of change is given.

No strikes, lockouts, or other stoppage of work to take place during life of agreement unless caused by violations of the agreement or by sympathetic building trades strikes sanctioned by the union and local in character.

Wages per hour, in home town and within 10 miles of same, 90 cents; out of town $1.05 per hour, to apply only when men are requested to report at such places. Car fare to be supplied to men working outside the city limits and within 10 miles.

No discrimination against sprinkler fitters because of acts alleged to have been committed, detrimental to the union.

Hours, eight per day. Half-holiday on Saturday. Saturday afternoon work, and overtime over eight hours, time and one-half.

Disagreements in any other local of the Union shall not affect local No. 379.

Disputes shall be referred to three umpires not connected with the pipefitting industry, decision of the majority being final and binding. There shall be no strikes or lockouts until a decision has been rendered by the umpires.

THOROLD, ONTARIO.—CERTAIN MASTER CARPENTERS OF THOROLD, ALLENBURG AND ADJOINING TERRITORY AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL NO. 1677.

Agreement to be in effect from May 1, 1927, until April 30, 1928, with 4 months' notice of change.

Hours, 8 per day, 4 on Saturday.

Wages, per hour until July 31, 1927, 85 cents; thereafter, 90 cents. Overtime until 9 p.m. and Saturday afternoon, time and one-half. Other overtime and Sundays and holidays, double time.

Union men to be hired when available. If not available non-union men if hired shall have 12 days to become members of the union.

Out-of-town car fare exceeding 7 cents to be paid.

Men to have a weekly pay day. Not less than two hours' notice of discharge to be given.

One apprentice to five journeymen. Apprentices may work overtime when with journeymen.

Foremen, 5 cents per hour over union rate.

Business agent may visit the job if not interfering with the work.

Men in shops may work one hour overtime on machines at straight time rate.

No member may do other work after hours while employed by a recognized contractor.

Extra pay for work on high scaffolds.

Grievances to be submitted to a committee of two from each party.

ST. CATHARINES, ONT.—THE BUILDERS' EXCHANGE, MASTER CARPENTERS, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 38.

Agreement to be in effect from May 1, 1927, to April 30, 1928.

The wage rates and terms of this agreement are similar to those in the agreement for Thorold, summarized above.

HAMILTON, ONTARIO.—CONTRACTORS' ASSOCIATION OF HAMILTON, NIAGARA PENINSULA DISTRICT, AND THE FRONTIER AND HAMILTON DISTRICT COUNCILS OF CARPENTERS.

Agreement to be in effect from May 1, 1927, until April 30, 1928.

Wages per hour in Hamilton, 85 cents.

Hours 44 per week. Overtime, time and one-half; Sundays and holidays, double time.

No work on Labour Day and Carpenters' Picnic Day.

Transportation in excess of 10 cents to be paid.

Wages to be paid every two weeks. Not more than two days' pay to be kept back. Carpenters discharged to be paid on the job, or waiting time.

Business agent to have access to jobs.

Lockers for tools and a shed for meals to be provided.

Carpenters must carry a working card. They must not work when other than carpenters do carpenters' work; this not being enforced without the consent of the fair contractor.

One apprentice to four journeymen.
Apprentice to join the union; wages of apprentices to be agreed upon.

HAMILTON, ONTARIO.—MASTER PLUMBERS, AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 67.

Agreement to be in effect from May 1, 1927 until April 30, 1928, and from year to year unless 2 months' notice of change is given.
Hours 44 per week.
Minimum wage, per hour, 95 cents.
Overtime, till midnight, time and one-half. Thereafter and Sundays and holidays, double time. For necessary repairs, up to one hour, regular rate.
Apprentices, fifth year, 70 per cent of journeymen's rate; sixth year 80 per cent; thereafter, minimum rate.
Members doing unsatisfactory work shall make same right, in their own time.
Fare and board to be paid for out-of-town work.
All plumbers employed under the agreement shall not work for any but established sanitary and heating engineers.
No rules or regulations curtailing output are to be made.
One apprentice to two plumbers or steamfitters; beyond this, labourers may be used, supervised by a journeyman.
The two branches of the trade shall be kept separate when possible.
Grievances to be referred to a joint conference board, or to the United Association General Office, no strike or lockout to take place until after an investigation.

REGINA, SASK.—ASSOCIATION OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS OF THE UNITED STATES AND CANADA, LOCAL No. 179.

Agreement to be in effect from May 1, 1926, until April 30, 1928.
Minimum wage for journeymen, $1 per hour.
In all other respects the agreement is the same as that summarized in the LABOUR GAZETTE for July, 1925.

REGINA, SASK.—ASSOCIATION OF CONSTRUCTION INDUSTRIES AND OPERATIVE PLASTERERS INTERNATIONAL ASSOCIATION, LOCAL No. 393.

Agreement to be in effect from June 1, 1927, until May 31, 1928.
Wages per hour, $1.30, paid by cheque weekly.
Hours, 44 per week. In the country, 10 hours per day may be worked.
Overtime, from six till nine p.m., time and one-half; thereafter and Saturday afternoons and holidays, double time. No work on Labour Day; necessary work on Sunday, double time.
Foreman to be a union man and receive 10 cents extra per hour. A foreman to three plasterers.
Transportation and moving time to be paid.
One hour's notice to be given of discharge.
An outside contractor shall employ 50 per cent local members.
Disputes shall be referred to a committee of three from each party.

CALGARY, ALBERTA.—MASTER PAINTERS' ASSOCIATION AND PAINTING CONTRACTORS, AND BROTHERHOOD OF PAINTERS AND DECORATORS, No. 583.

Agreement to be in effect from April 15, 1927, until March 31, 1928, with 60 days' notice of change.
Hours, 8 per day, 4 on Saturday.
Minimum wage per hour, 75 cents.
Any man in charge of 3 or more men will receive 5 cents per hour above schedule.
One apprentice to four journeymen, same to serve three years, starting under age of 21.
Wages to be paid in cash or cheque, with time to cash the latter.
Travelling expenses travelling time and certain living expenses to be paid outside city.
No man to be allowed to mix paint or carry material outside of working hours.
Overtime, until midnight, time and one-half; thereafter and Saturday afternoons, Sundays and holidays, double time.
On regular night work, 10 hours' pay for 8 hours' work.
No discrimination by employers against union men.

CALGARY, ALBERTA.—ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS, STEAMFITTERS AND GENERAL PIPEFITTERS, LOCAL 496.

Agreement to be in effect from May 1, 1927, to April 30, 1928, and for another year unless notice of change is given by January 1, 1928.
Hours, 8 per day; 4 on Saturdays. One half-hour additional may be worked at regular rates to complete a job in hand. Out of town hours may be ten per day with one hour for dinner.
Minimum wage per hour, journeymen, $1.12½. Apprentice in fifth year, 75 cents per hour.
Overtime, first five hours, time and one-half; thereafter and Sundays and holidays, double time. Night shifts for at least two nights, time and one-quarter for a ten hour shift.
Men sent out of town are to have expenses, board and travelling time.
An apprentice may use the tools during first three years only under supervision of a licensed journeyman. Apprenticeship to last five years.
An apprentice with certificate of the Institute of Technology will receive six months' credit on apprenticeship.
One plumber's apprentice to a shop, and one to each five plumbers; not more than five to a shop.
One steamfitters' apprentice to a shop where a steamfitter has been engaged for nine months of preceding year. In a shop having no work, apprentice may be loaned where he can continue training.
Apprentices to be registered with union.
Not more than one steamfitters' labourer to each journeyman steamfitter except in case of heavy lifting.
Wages weekly in cash, or by cheque prior to Saturday.
Contractors receiving work under this local's jurisdiction shall employ 50 per cent of resident plumbers or fitters.
Only union men to be employed under the agreement, preference to be given by employees to the Employers' Association.

Members of one branch of the trade may work at the other only on permit.

Grievances are to be settled by local union agent and the employer, or by a committee of each party.

Saturday morning work in the summer to be suspended from June 15 to August 15, providing shops desiring same have journeymen at shop in rotation.

VANCOUVER, B.C.—THE CONTRACTING PLASTERERS' ASSOCIATION AND OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL 89.

Agreement to be in effect from August 2, 1926, until May 1, 1927 and thereafter, with 90 days' notice of change.

Wages per day of 8 hours, $10.

No sympathetic strikes to be entered into until duly appointed committee have exhausted all efforts to adjust the same.

A committee will adjust difficulties that may arise.

BUILDING PERMITS ISSUED IN CANADA IN MAY, 1927

THE value of the building permits issued by 63 cities during May was higher by 16.7 per cent than in April, 1927, and by 11.0 per cent than in May, 1926, according to statements tabulated by the Dominion Bureau of Statistics; these showed that the authorizations amounted to $20,532,147, as compared with $17,587,536* in the preceding month and with $18,504,296 in May, 1926. The total for May exceeded that for the same month in any other year since this record was begun in 1920, while building cost continued lower than in any of the last eight years.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 2,000 permits for dwellings valued at approximately $9,000,000 and for some 4,000 other buildings estimated to cost more than $10,250,000. In April, authority was given for the erection of nearly 1,700 dwellings and 3,800 other buildings, valued at approximately $8,200,000 and $8,000,000, respectively.

New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia reported increases in the value of the permits issued as compared with April, 1927, the largest gain of $1,326,615 or 18.2 per cent being registered in Ontario. Of the declines in the remaining provinces, that of $1,158,617 or 21.4 per cent in Quebec was most pronounced.

As compared with May, 1926, Quebec and British Columbia recorded reductions of $1,115,749 or 20.7 per cent and $57,444 or 2.3 per cent, respectively. The other provinces recorded increases, of which those of $898,029, or 104.4 per cent in Saskatchewan and $975,314, or 12.7 per cent in Ontario were greatest.

Of the larger cities, Montreal, Toronto and Winnipeg reported higher totals of building permits issued than in either April, 1927, or May, 1926, while Vancouver showed an increase in the former and a decrease in the latter comparison. Of the other centres, Sydney, Moncton, Saint John, Shawinigan Falls,

*Total—35 cities	17,075,504	13,827,453	15,767,998

[1] Corrected figure.

Brantford, Chatham, Galt, Ottawa, Peterborough, Port Arthur, St. Catharines, Ford, Riverside, St. Boniface, Moose Jaw, Regina, Saskatchewan, Calgary, Edmonton, Kamloops, Point Grey and Victoria reported increases in the value of the building authorized as compared with both the preceding month and the corresponding month last year.

Cumulative Record for First Five Months, 1927.—The following table gives the value of the building authorized by 63 cities during May and in the first five months of each year since 1920. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1913=100).

Year	Value of permits issued		Average indexes of wholesale prices of building material in first five months
	In May	In first five months	
	$	$	
1927	20,532,147	62,973,761	147·3
1926	18,501,296	60,012,369	151·1
1925	15,520,435	50,983,833	153·8
1924	14,807,589	46,544,689	166·0
1923	18,937,638	57,916,608	165·7
1922	19,527,061	54,0 0,922	161·1
1921	14,460,878	41,530,750	200·7
1920	13,082,015	47,640,916	215·9

The aggregate for the first five months of this year was nearly 5 per cent greater than in 1926, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued to be lower than in any other year since 1920.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contain the general fair wages clause, which is as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

The contracts for interior fittings (Group "B") awarded contain the general fair wages clause, and other conditions for the protection of the labour employed in their execution, as sanctioned by the Fair Wage Order in Council as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Four of the contracts above mentioned contained schedules of rates and hours based on the current standards of the district in these respects. These schedules are given below.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppressing of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

1. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permis-

sion of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction)

Dredging at Mitchell's Bay, Ontario. Name of contractors, The Chatham Dredging and General Contracting Company, Limited, of Chatham, Ont. Date of contract, June 16, 1927. Amount of contract, approximate expenditures, $6,500.

Dredging entrance channel and inner harbour at Kincardine, Ont. Name of contractors, Kilmer and Barber, Limited, Toronto, Ont. Date of contract, June 21, 1927. Amount of contract, approximate expenditure, $17,390.

Dredging in the Harbour of Hilton Beach, Ont. Names of contractors, A.B. McLean, Roderick A. McLean and John McLean, Sault Ste. Marie, Ont. Date of contract, June 22, 1927. Amount of contract, approximate expenditure, $2,720.

Dredging basins at Southwest and north sides of wharf and entrance channel to wharf, at Rimouski, P.Q. Name of contractors, National Dock and Dredging Corporation, Limited, Quebec, P.Q. Date of contract, June 14, 1927. Amount of contract approximate expenditure, $27,542.

Supply of one electric hoist and boom swinger at Berth 15, West St. John, N.B., to operate a derrick. Name of contractors, Mussens Limited, Montreal, P.Q. Date of contract, May 17, 1927. Amount of contract, $6,480.

Construction of a public building at Mont Laurier, P.Q. Name of contractors, J. B. Reid et Cie., of Rapide de l'Orignal, P.Q Date of contract, June 4, 1927. Amount of contract, approximate expenditure, $16,200.

Dredging channel in the Ottawa River, between Kettle Island and mainland (Quebec side) at West Templeton, P.Q. Name of contractors, The Randolph Macdonald Company, Limited, of Toronto, Ont. Date of contract, May 26, 1927. Amount of contract, approximate expenditure, $33,312.

Dredging area outside Harbour line at Port Maitland, Ont. Name of contractors, A. W. Robertson, Limited, Montreal, P.Q. Date of contract, June 15, 1927. Amount of contract, approximate expenditure, $7,200.

Reconstruction of a portion of the wharf and construction of freight sheds at Railway wharf, Summerside, Prince County, P.E.I. Names of contractors, Farley and Grant, Ottawa, Ont. Date of contract, June 16, 1927. Amount of contract, unit prices, approximate expenditure, $57,736.52.

Repairs to piers consisting of the reconstruction in concrete of portions of the North and South Piers at Kincardine, Ont. Names of contractors, E. A. Henry and D. G. Ross, Kincardine, Ont. Date of contract, June 15, 1927. Amount of contract, unit prices, approximate expenditure, $24,750.46.

Dredging channel from Pointe Maquereau to Notre Dame de Pierreville wharf, P.Q., in river St-François. Name of contractor, Aimé Laperrière of Pierreville, P.Q. Date of contract, June 14, 1927. Amount of contract, approximate expenditure, $19,066.50.

Dredging at outer entrance channel and outside of west and east breakwater, etc., at Port Stanley, Ont. Name of contractors, A. W. Robertson, Limited, Montreal, P.Q. Date of contract, June 15, 1927. Amount of contract, approximate expenditure, $36,336.30.

Dredging at Deep Brook (Annapolis Basin), N.S. Name of contractors, St. John Dry Dock and Ship Building Company, Limited, St. John, N.B. Date of contract, June, 9, 1927. Amount of contract, approximate expenditure, $10,000.

Repairs to Harbour Works along the east side of the Basin at Port Elgin, Ont. Name of contractor, R. M. Hunter, Kincardine, Ont. Date of contract, June 11, 1927. Amount of contract, approximate expenditure, $3,728.96.

Supply and installation of electric wiring and fittings in the Public Building at Guelph, Ont. Name of contractors, Patterson Electric Company, Toronto, Ont. Date of contract, June 18, 1927. Amount of contract, $2,480.

Construction of additions and alterations to the Public Building at Kenora, Ont. Name of contractors, Adrian Lindstrom and Alfred Nilson, Kenora, Ont. Date of contract, June 18, 1927. Amount of contract, $13,400.

Construction of a flax building at Experimental Farm, Ottawa, Ont. Name of contractors, N. O. Cuthbertson and Arthur W. Clark, Ottawa, Ont. Date of contract, June 21, 1927. Amount of contract, $9,750.

Construction of an extension to wharf at Montmagny, County of Montmagny, P.Q. Name of contractor, J. Elzear Boulanger, Montmagny, P.Q. Date of contract, June 21, 1927. Amount of contract, unit prices, approximate expenditure, $6,748.80.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in Group "A" (Construction)

Backfilling of a certain area of the Rideau Canal lands, at Ottawa, Ont. Name of contractors, The Foundation Company of Can-

ada, Limited, Montreal, P.Q. Date of contract, June 20, 1927. Amount of contract, $1 per cubic yard, approximate expenditure, $25,000.

Contracts in Group "B" (Interior Fittings)

Supply and installation of interior fittings in the Post Office at Napanee, Ont. Name of contractors, The Canadian Office and School Furniture Company, Limited, Preston, Ont. Date of contract, June 7, 1927. Amount of contract, $1,947.

Supply and installation of Belt Distributors in Postal Station "A", Toronto, Ont. Names of contractors, Matthews Conveyor Company, Limited, Port Hope, Ont. Date of contract, June 9, 1927. Amount of contract, $18,500.

Contracts containing schedule of wages and hours

Supply of material and erection of a fence around boundaries of the Songhees Dry Dock and adjoining grounds of the Royal Canadian Naval Barracks, Esquimalt, B.C. Name of contractors, The Peerless Wire Fence Company, Limited, Hamilton, Ont. Date of contract, May 20, 1927. Amount of contract, $12,466.

Letter pouches	188 00
Scales	505 00

FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA

IN compliance with the provisions of the Fair Wage Act of Manitoba of 1916 (chapter 121 with amendments) the Bureau of Labour, which is the Department of Public Works, has issued new fair wage schedules of rates of wages and maximum number of working hours in connection with the execution of public works, the schedules to be in effect from May 1, 1927, to April 30, 1928. The first schedule relates to the city of Winnipeg and a radius of thirty miles around it, and the second to the rest of the province. The only change made in the rates for 1927-1928 is in the electrical works section (*a*) licensed journeymen, which have been increased from 85 cents to $1.00. The balance of the rates in the fair wage schedule are the same as in the previous year. Last year's schedule was printed in the LABOUR GAZETTE for May, 1926.

	Winnipeg		Manitoba	
	Rate per Hour	Hours per Week	Rate per Hour	Hours per Week
	$ cts.		$ cts.	
1. *Labourers:*—				
(*a*) Skilled—Comprising the following:—Unloading, piling, and handling face brick, cut stone, architectural terra cotta, marble (real or imitation), roofing slate, plaster castings, ornamental bronze and iron, interior joinery, laying drain tiles, mixing concrete by machinery, puddling concrete in forms or levelling and finishing in slabs, bending and placing reinforcing material, moveable scaffolding and runways	.50	50	.45	50

(Subject to all the conditions contained in a certain agreement dated June 17, 1922, by and between the General Contractors' Section, Winnipeg Builders' Exchange, and the United Brotherhood of Carpenters and Joiners of America, District Council, Winnipeg, Man., Local No. 343)				
(*b*) *Helpers*	.50	50	.45	50
23. *Outside linemen*	.89	44	.89	44

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being somewhat higher, the former due mainly to higher prices for potatoes, and the latter to advances in the prices of grains, flour, and potatoes.

In retail prices the cost per week of a list of twenty-nine staple foods, for an average family of five in terms of the average retail prices in some sixty cities, was $10.86 at the beginning of June, as compared with $10.76 for May; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. Besides a substantial advance in the price of potatoes less important increases occurred in the prices of beef, veal, eggs and flour. Butter prices were substantially lower, while slight declines occurred in the prices of mutton, pork, bacon, lard, milk and cheese. Including the cost of fuel and rent with that of foods the total budget averaged $21.04 at the beginning of June, as compared with $20.95 for May; $21.31 for June, 1926; $20.67 for June, 1925; $20,22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.81 for June, 1920; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June, 1914. Fuel was again slightly lower, due mainly to lower prices for anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced to 153.5 for June, as compared with 151.9 for May; 155.6 for June, 1926; 158.6 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak), 201.7 for June, 1919; and 196.0 for June, 1918. Forty-nine prices quotations advanced, forty-five were lower and one-hundred and forty-two were unchanged.

In the grouping according to chief component materials two of the eight main groups advanced, four declined and two were practically stationary. The Vegetables and their Products group was substantially higher, lower prices for coffee, tea, raw sugar, rosin, hay and straw being more than offset by higher levels for grains, flour, potatoes and some fruits. The Fibres, Textiles and Textile Products group was also somewhat higher, due to increases in the prices of cotton and some cotton products. The groups which declined were: the Animals and their Products group, due to the lower prices for live stock, pork products, mutton and butter, which more than offset advances in the prices of hides, leather, boots and shoes; the Non-Ferrous Metals and their Products group, due to lower prices for copper, copper products, brass sheets and lead, which more than offset advances in the prices of tin, silver, and spelter; the Non-Metallic Minerals group, due mainly to lower prices for gasoline; and the Chemicals and Allied Products group, due to declines in the prices of white lead and glycerine. The Wood and Wood Products group and the Iron and its Products group were both practically stationary.

In the grouping according to purpose both consumers' goods and producers' goods were somewhat higher, the former due to higher prices for flour, potatoes, fruits and boots and shoes, which more than offset lower prices for coffee, smoked meats, butter and gasoline; and the latter due to higher prices for materials for the fur industry, for the leather industry, for the milling and other industries, as well as miscellaneous producers' materials, which more than offset declines in the prices of materials for the metal-working industries, for the chemical using industries and for the meat packing industries.

In the grouping according to origin raw or partly manufactured goods advanced, due mainly to higher prices for grains, potatoes, fruits, hides, cotton, jute, silver, tin and spelter. Fully or chiefly manufactured goods were slightly lower, increases in the prices of flour and milled products, cotton and leather being more than offset by declines in the prices of smoked meats, butter, raw sugar, silk, and copper and leather products. Domestic farm products advanced, while articles of marine origin declined. Articles of forest origin and articles of mineral origin showed little change.

Professor Michell's index number of wholesale prices for forty articles, with prices during 1900-1909 as 100, was again somewhat higher at 173.6 for June, as compared with 170.6 for May; 175.9 for June, 1926; 269.9 for June, 1920; and 115.6 for June, 1914. Food stuffs were considerably higher, due mainly to an increase in the prices of potatoes, although the prices of fish and flour also ad-

vanced. Manufacturers' goods were somewhat lower. The prices of raw cotton and hides advanced but the prices of wool, silver, lead, coal oil and rubber declined.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24." issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages

of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE for January on Prices in Canada and in Other Countries, page 9. This table gives figures for June and December each year from 1914 to 1926, inclusive. Figures are now available also for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly figures 1918 to 1926, and monthly figures for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925; 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices were again considerably higher, increases being reported from most localities. Sirloin steak was up from an average of 31.8 cents per pound in May to 33.2 cents in June; round steak from 26.3 cents per pound in May to 27.5 cents in June; rib roast from 24.2 cents per pound in May to 25.4 cents in June; shoulder roast from 17.9 cents per pound in May to 19.1 cents in June; and stewing beef from 14.1 cents per pound in May to 14.8 cents in June. Veal was up in the average from 20 cents per pound in May to 20.3 cents in June. Mutton was slightly lower, averaging 29.9 cents per pound, as compared with 30.2 cents in May Both fresh and salt pork were somewhat lower, the former averaging 28.4 cents per pound in June and 28.8 cents in May, and the latter averaging 26.4 cents per pound in June and 26.8 cents in May. Bacon was down from an average of 39.8 cents per pound in May to 39.4 cents in June. In fresh fish halibut and white fish were somewhat higher. Lard was slightly lower at an average price of 21.7 cents per pound.

Eggs advanced in most localities, fresh averaging 36.2 cents per dozen in June, as compared with 35.1 cents in May, and cooking averaging 33.1 cents per dozen in June as compared with 31.7 cents in May. Milk was down in the average from 11.8 cents per quart in May to 11.6 cents in June. Declines were reported from Sherbrooke, St. Hyacinthe, St. John's, Regina, Prince Albert, Medicine Hat and Edmonton. The prices of butter were substantially lower, dairy averaging 40 cents per pound in June, as compared with 43.9 cents in May, and creamery 44.1 cents per pound in June as compared with 49.1 cents in May. Lower prices were reported from practically all localities, although the decrease was more pronounced throughout Ontario than in other provinces. Cheese was slightly lower, averaging 30.6 cents per pound.

Bread showed little change in the average at 7.7 cents per pound. Flour was up from an average of 5.2 cents per pound in May to 5.3 cents in June. Soda biscuits and rolled oats were unchanged. Canned vegetables were steady. Onions were substantially higher averaging 9.2 cents per pound in June, as compared with 7 cents in May. The increase was general. Potatoes showed a general advance averaging $2.12 per ninety pounds in June, as compared with $1.65 in May. Substantially higher prices were reported from practically all localities, although the increase was more pronounced throughout the province of Ontario than elsewhere. The prices in June this year were, however, considerably under those in June, 1926, when the average was $3.02 per ninety pounds. Raisins and currants showed little change. Granulated sugar was unchanged in the average at 8.4 cents per pound. This price has prevailed since the beginning of the year. Coffee was slightly higher, averaging 61.4 cents per pound. Anthracite coal was down from an average price of $16.40 per ton in May to $16.26 in June. Lower prices were reported from Charlottetown, Quebec, Hull, Ottawa, Belleville, Niagara Falls, Windsor, Sarnia, Timmins and Sault Ste. Marie. Bituminous coal was also slightly lower at an average price of $10.16 per ton, as compared with $10.24 in May. Wood showed little change, hardwood averaging $12.14 per cord and softwood $8.92 per cord. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement of wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices averaged higher than in May. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis being $1.61 per bushel, as compared with $1.56 in May. Favourable weather during June, however, caused a downward tendency towards the end of the month. The price ranged from $1.65½ at the beginning to $1.57½ on the 25th. Coarse grains followed the trend in wheat, western barley being up in the average from 87½ cents per bushel to 92 cents; western oats from 62 cents per bushel to 64 cents; corn from $1 per bushel to $1.10; flax seed from $1.99 per bushel to $2; Ontario barley from 72½ cents per bushel to 78 cents; and Ontario oats from 52⅔ cents per bushel to 55 cents. Flour at Toronto advanced from $8.58 per barrel to $8.94. Raw sugar declined from $4.42¾ per hundred pounds to $4.17¾. Coffee fell 1 cent per pound to 22 cents. Ceylon rubber was again lower, the price being down from 40.9 cents per pound to 37.3 cents. The price of potatoes at Toronto advanced from $2.30 per ninety pounds to $2.97½; at Winnipeg from 77½ cents per bushel to $1.28; and at St. John, N.B., from $3.75-$4 per barrel to $3.75-$4.50. Turpentine was 10 cents per gallon lower at $1.05. Rosin was down from $14.50 per barrel to $14. Prices of live stock were lower, western cattle at Winnipeg being down from $9.63 per hundred pounds to $9.19; choice steers at Toronto from $9.04 per hundred pounds to $8.87½; hogs from $10 per hundred pounds to $9.58; and sheep from $7.06 per hundred pounds to $6.25. The price of meats, for the

‡The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See text. †December only. §Kind most sold. *For electric light see text.
‡‡An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent: see text.

Continued from page 802

most part, was lower, dressed mutton being down from 12½ cents per pound to 11 cents; bacon from 29½ cents per pound to 26 cents; and smoked ham from 28¼-30½ cents per pound to 27-29 cents. Finest creamery butter at Montreal declined from 38 cents per pound to 36 cents and creamery prints at Toronto from 40 cents to 39 cents; solids from 40 cents per pound to 37 cents and dairy prints from 34 cents per pound to 33 cents. Beef hides advanced from 13-13½ cents per pound to 16-17 cents; calf skins from 15-16 cents per pound to 19-20 cents. Sole leather rose from 37 cents per pound to 40 cents. Boots and shoes were also higher. Cotton was slightly higher at New York at 16.9 cents per pound, as compared with 16 cents in May. Raw jute advanced from $7.95 per cwt. to $8.34. In non-ferrous metals copper declined from $14.80 per cwt. to $14.45; copper sheets from 20¾ cents per pound to 20½ cents; copper wire from 17¾ cents per pound to 17 cents; and lead from $6.90 per cwt. to $6.65; while zinc was up from $7.63 per cwt. to $7.83; tin from 67 cents per pound to 67¼ cents; and silver from 56 cents per ounce to 57 cents. Gasoline at Toronto was 19½ cents per gallon as compared with 21½ cents in May. Glycerine was 2 cents per pound lower at 24 cents.

Compulsory Arbitration in Norway

It may be remembered that Norway has already on various occasions tried a system of compulsory arbitration in labour disputes. The last Act in a series of provisional measures for this purpose was adopted by the Storting in 1922 and expired in 1923. A proposal for the introduction of compulsory arbitration as a permanent institution, submitted two years later as one of the chief items in the program of the then Liberal Government, did not obtain the necessary majority in the Storting, owing to opposition by both the Conservative and the Labour parties.

Early this year the serious situation in the labour world again brought the question of compulsory arbitration to the fore. Since the middle of February, a dispute has been in progress in several important branches of industry (mining, iron, textiles, and the boot and shoe industries), while in the paper industry peace has been guaranteed only by a preliminary agreement subject to a fortnight's notice on either side. Notwithstanding protracted negotiations, both through the official conciliators and through a special mediation committee, these disputes were not brought to an end; on the contrary, they threatened to become even more widespread.

In view of this, the Government—now Conservative—decided at the end of April to introduce a Bill for compulsory arbitration. As a result, there was adopted a new provisional Compulsory Arbitration Act, which was sanctioned on 5 May and is to remain in force until 1 August, 1929.

Industrial Relations in Sweden

During the last seven years, ever since the extensive industrial disputes of 1919-1920, efforts have been made in Sweden to prepare legislation for the promotion of industrial peace.

An enquiry into the problem was instituted at the beginning of last year by the Government, by means of a Committee which included representatives of workers and employers. A few months later, pending the results of this investigation, the Ministry of Social Affairs proceeded to draft two Bills providing for compulsory arbitration in disputes arising out of the interpretation of collective agreements, with a view to their introduction during the 1927 Session of the Ricksdag.

Early in the present year the Government experts produced two drafts relating respectively to the enforcement of collective agreements and the institution of labour courts.

The first Bill would prohibit stoppages of work, either by strike or by lockout, during the period covered by a collective agreement, and would render either party to a breach of this provision or of an agreement liable to be mulcted in damages by award of a labour court. The second Bill provided for the constitution and powers of such labour courts.

The two Bills were submitted to administrative departments and employers' and workers' organizations for their opinion. Most of the Government departments consulted, and some of the employers' organizations, supported the proposals. Practically all the workers' organizations opposed them on the ground that such legislation was neither necessary nor desirable.

In view of the diversity of opinions, the Government decided to postpone the raising of the question in the Riksdag until the 1928 Session, and in the meantime to consider the redrafting of the Bills.

44157—9½

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The index number of the Board of Trade, on the base 1913=100, was 141.1 for May, a rise of 0.9 per cent for the month. Total foods rose 3.3 per cent owing to sharp rises in cereals and in "foods other than cereals, meat and fish." Non-foods declined slightly, with slight declines in most groups, but a rise of 6.5 per cent in cottons. On the base, average prices for 1924=100, the index number for May was 84.9.

The *Statist* index number (in continuation of Sauerbeck's figures) was 123.8 at the end of May, making a rise of 0.4 per cent for the month. Foodstuffs registered an advance of 1.4 per cent. Materials declined 0.2 per cent. There was a decline in minerals and an advance in textiles.

The *Times* index number, on the base 1913=100, was 141.9 in May, an advance of 1.9 per cent over the April level. Foods rose 3.6 per cent owing to advances in cereals and in "food other than cereals, meat and fish." Materials rose 1.0 per cent owing chiefly to a rise of 9.3 per cent in cotton. Other textiles and the miscellaneous group also rose, while metals and minerals declined.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1924=100, was 163 at June 1, as compared with 164 at May 1. The decline was due to reductions in retail prices of coal. Clothing declined

slightly and other groups were unchanged. The index numbers by groups were as follows: food, 154; rent, 151; clothing, 210-215; fuel and light, 175; sundries, 180.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 846 in April, a decline of 1.4 per cent for the month. There were declines shown by eleven of the groups and slight advances by three, while the remaining three showed no change.

COST OF LIVING.—The official index number of the cost of living of a workingman's family of the lowest category, on the base 1921=100, was 201.28 for May, as against 203.06 for April. Foods, heat and light and sundries fell slightly and rent and clothing advanced.

Denmark

COST OF LIVING.—The Statistical Department index number, which has hitherto been calculated semi-annually, will appear four times a year, beginning with April, 1927. The figure will express the height of the price level at the beginning of January, April, July or October, instead of being, as formerly, an average of prices of two previous quarterly calculations. The figure for April was 178, being a slight decline from the previous figure, 181, the average for October, 1926 and January, 1927. Foodstuffs, clothing, fuel and light, taxes, etc., and sundries declined, and rent rose.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 642 in May, a decline of 1.2 per cent from the April level. Both native and imported products declined slightly. Foods declined 2.4 per cent, with declines in all groups, and industrial materials on the whole were practically stationary, with a slight drop in the minerals and metals group and an advance in the miscellaneous group.

COST OF LIVING.—The official index number of cost of living, Paris, on the base 1914=100, was 524 for the first quarter of 1927, as against 545 for the previous quarter. This was a decline of 3.8 per cent. Foods, heat and light, clothing and sundries all showed considerable declines and rent showed no change.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 536.55 in May, marking the ninth successive monthly decline, from a peak of 691.35 reached in August, 1926. For the month of May, the decline was one of 5.1 per cent, with a drop of 4.5 per cent in foods and one of 5.3 per cent in industrial materials.

COST OF LIVING.—The index number of cost of living, Milan, on the base July, 1920=100, was 147.86 in March, a decline of 0.8 per cent for the month. Foods and sundries declined slightly and the remaining groups showed no change.

Poland

COST OF LIVING.—The index number of the Central Statistical Office of cost of living at Warsaw (nominal index), was revised for the months from April to December, 1926, inclusive, owing to changes in the method of calculating rentals and revised figures are given in the accompanying table. The index numbers for foods for the early months of 1927 are not yet available.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base 1913=100, was 145 in May, an advance of 2 points on the level of the month of April. There were advances in raw materials and manufactured goods, and no change in semi-manufactured goods.

COST OF LIVING.—The index number of cost of living, on the base July, 1914=100, was 170

on April 1, a decline of one point for three months. During the period there were declines in foods and fuel and light and advances in housing and taxes.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base prices in July, 1914=100, was 144 in April, a decline of 4 points or 2.7 per cent for the month. The decline was caused by lower prices of foods, which were influenced by a drop of 5.4 per cent in prices of cereals. Non-foods declined slightly, all groups showing lower prices except "textiles other than cotton" and hides and skins.

COST OF LIVING.—The working class cost of living index number, Bombay, on the base prices in July, 1914=100, was 152 in May, a decline of one point for the month. There was a decline of one point in the foods group, and a rise of 4 points or 2.8 per cent in clothing. Fuel and lighting and house rent showed no change.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13=1,000, was 1,547 for April, a rise of 3 points for the month. There were slight advances in foodstuffs, etc., of vegetable origin, wood and wood products, animal products and chemicals and manures, and declines in textile manufactures, metals and their products, and non-metallic minerals and their products.

United States

WHOLESALE PRICES.—The *Annalist* index number of wholesale commodity prices, on the base 1913=100, was 141.3 for May, showing no change for the month. There were slight advances in farm products, textiles, and building materials, and slight declines in food products, fuels, metals, chemicals and the miscellaneous group.

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of month up to of month. (h) Four chief cities. (i) January 1913–December 1920, 22 foods. (k) Cost of food budget. (l) Index prices on the base 100 hereafter. (p) Index discontinued. New Index number in 1926. (q) Figures for following month.

Bradstreet's index number, showing the cost of one hundred and six commodities, continued to decline, being $12.3803 for the beginning of July, as compared with $12.4265 for June 1; and $12.7378 for July, 1926. Prices are now 16.8 per cent above the low point of the post-war period reached in June, 1921, but are 40.6 per cent below the peak reached in February, 1920. Of the one hundred and six commodities twenty-one advanced, thirty declined and fifty-five were unchanged. Five of the thirteen groups advanced, while eight declined. The groups which advanced were textiles, hides and leather, fruits, coal and coke, and chemicals and drugs, the most important advances being in cotton goods and hides and leather. The groups which declined were provisions, miscellaneous products, naval stores, metals, live stock, breadstuffs, oils and building materials, most of the decline being in the two first named groups.

Dun's index number, showing the cost per capital of a year's supply of commodities,

end of 1920; beginning of month thereafter. *(e)* Beginning of month. *(f)* Base is average for six capital towns. *(g)* 15th number of prices in zlotys, 1914=100. *(m)* From Jan., 1925, end of previous month. *(n)* No figures published. *(o)* Gold *(r)* Monthly figures hereafter.

declined to $185.598 for the beginning of July, as compared with $187.221 for June and $186.014 for July, 1926. Small advances occurred in the clothing, metals, meats, and miscellaneous groups, but these were more than offset by the declines in breadstuffs, dairy and garden products and in "other foods".

RETAIL PRICES.—The retail food index of the Bureau of Labour Statistics was 155.4 on May 15, on the base 1913=100, showing an increase of about one per cent for the month. Ten articles increased, twenty-one decreased and eleven showed no change.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, showing the level of the cost of living in Massachusetts, on the base 1913=100, was 159.9 in May, as against 159.2 in April. This rise was caused mainly by higher food prices due to increases in meat and potato prices. Clothing and fuel and light prices were lower and other elements showed no change.

(a) Quarter beginning in specified month. *(b)* Average for year. *(c)* Figure for previous month. *(d)* Following month. *(e)* Middle of month. *(g)* First of month. *(h)* End of month. *(j)* Monthly average. *(k)* For 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. *(l)* Gold prices hereafter on the base 100. *(m)* Revised figures for 1926. *(n)* Index number of prices in zlotys, on the base 100. *(p)* New series.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Workman on Monthly Wage must be paid Monthly

A farmer hired a man to work for the season at a monthly salary of $55. After three months the hired man asked for money and received $10 from his employer. He then asked for a settlement, but the farmer told him he had no money in the house, and that if he had the money he would certainly keep back one month's pay. The hired man then left his employment, and sued for three months' wages, less $10. In the County Court judgment was given for the plaintiff for $155, and in favour of the defendant on a counterclaim for the sum of $65, alleged to be due to him owing to breach of contract on the part of the hired man. On an appeal by the plaintiff against this judgment the Manitoba Court of Appeal allowed the appeal with costs, and dismissed the counterclaim.
